## **EXECUTIVE SUMMARY**

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the Will Rogers Elementary School located at 2401 14<sup>th</sup> Street, Santa Monica, Los Angeles County, California (Site). The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or adjacent to the Site. These issues are considered recognized environmental conditions (RECs).

#### Site Location and Use

The Site is located at 2401 14<sup>th</sup> Street in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 6.1 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4284-038-900. The Site is located within an area primarily for mixed school and residential use. Current uses of adjoining properties include residential developments to the northwest, southeast, and southwest, and a middle school to the northeast.

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows), playground areas, and a garden area in the southeast portion of the site.

The Site was previously undeveloped prior to 1928. By 1928, several residential homes had been constructed on the Site. Between 1938 and 1952, the Site had was redeveloped with the Will Rogers Elementary School. Additionally, a church structure and associated parking area were constructed on the southeastern portion of the Site around 1950. Around 2019, the church structure was demolished, and the property developed with a garden that is now part of the Site.

#### Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any data gaps.

#### Vapor Encroachment Conditions (VEC)

A Tier 1 vapor encroachment screen (VES) for potential chemicals of concern (COC) was completed for the Site. The assessment was based on the ASTM published Standard Guide E 2600-15. The purpose of the VES was to evaluate for the potential for a vapor encroachment condition (VEC) which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of vapors from contaminated soil or groundwater on or near the Site. The results of the VES did not identify evidence of a potential VEC in connection with the Site.

#### **Conclusions and Recommendations**

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

## **1 INTRODUCTION**

The purpose of this assessment was to evaluate the environmental condition of the Site as part of the District's environmental review standards in order to comply with the California Environmental Quality Act (CEQA) and Title V of the California Education Code. The assessment was performed to the standards to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner, or bona fide prospective purchaser under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13;
- 2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312); and
- 3. 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

This report was prepared exclusively for use by Santa Monica-Malibu Unified School District. This report may not be relied upon by any other person or entity without NV5's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

## 1.1 Objectives

NV5's objective for this environmental assessment was to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site. The assessment was done to meet ASTM Standard Practice E1527-13.

The assessment provided herein was determined based on the following:

- 1. Current and past property uses and occupancies;
- 2. Current and past uses of hazardous substances;
- 3. Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
- 4. Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances;
- 5. Engineering controls;
- 6. Institutional controls; and
- 7. Evaluation of properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

## 1.2 Services

NV5 performed the following services to assess the property:

1. Reviewed historical sources of information;

- 2. Searched for recorded environmental clean-up liens;
- 3. Reviewed Federal, State, Tribal, and local government records;
- 4. Visually inspected the site and the adjoining sites;
- 5. Evaluated any specialized knowledge or experience on the part of the purchaser;
- 6. Determined commonly known or reasonably ascertainable information about the property; and
- Evaluated properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

## 1.3 Assumptions

NV5 has assumed the following for the purposes of this assessment:

- 1. Information provided during any interview (written or oral) was accurate and correct;
- 2. Database information reviewed was accurate and correct;
- 3. Historical information reviewed was accurate and correct;
- 4. Information reviewed at any governmental agency was accurate and correct;
- Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data or well data from adjacent sites, are assumed based on contours depicted on the United States Geological Survey (USGS) Topographic Maps; and
- 6. The property has been correctly and accurately identified by the client, client representatives, property contact, property owner, and/or property representatives.

## 1.4 Limitations

This assessment is limited to the standards set forth in ASTM Standard Practice E1527-13. This assessment specifically excludes assessment of the following:

- 1. Asbestos and asbestos-containing building materials;
- 2. Biological agents;
- 3. Cultural and historic resources;
- 4. Ecological resources;
- 5. Endangered species;
- 6. Health and safety;
- 7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
- 8. Industrial hygiene;
- 9. Lead-Based Paint;
- 10. Lead in Drinking Water;
- 11. Mold;
- 12. Radon;
- 13. Regulatory compliance; and
- 14. Wetlands.

Considerations identified by ASTM as beyond the scope of a Phase I Environmental Site Assessment (ESA) may affect business environmental risk at a given property. These environmental issues or conditions may warrant assessment based on the type of property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13; and therefore, not addressed during this assessment.

Per the authorized scope of work, specific client requested items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment (Section 6.0). These items included several items, listed on

the following page, that address specific California Department of Education (CDE) requirements for school construction.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. The conclusions presented in this report are based solely on the services described herein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling of any kind was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical or physical analyses have been performed during this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted. As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. NV5 makes no warranty, express or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. The assessment is not intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

## 1.5 Terms

The following terms are used in this report:

• "Site" refers to the property within the approximate boundaries described in Section 2;

- "Immediate site vicinity" refers to properties adjacent to the Site that share a common boundary with the Site; and
- "Site vicinity" refers to the area within an approximate 1-mile radius of the property.
- "Recognized Environmental Conditions" (RECs) The presence or likely presence of any hazardous substances or petroleum products in, on, at or to a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.
- "Controlled Recognized Environmental Condition" (CREC) A recognized environmental condition resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls*, or *engineering controls*). A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.
- "Historical Recognized Environmental Condition" (HREC) A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
- "Migrate/migration" For the purposes of this practice, "migrate" and "migration" refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.
- "Hazardous Substances" The term "hazardous substance" is used here in general accordance with its use as defined in the following regulations:
  - -- Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended; and
  - -- Superfund Amendment and Reauthorization Act (SARA) of 1986, as amended.

The terms "material," "waste," and "substances" are used interchangeably, and no legal distinction is implied between the terms as used herein. The words "impact" or "impacted" are used to mean the effect or result of a release of a hazardous substance that could result in a hazardous waste being present at the property. Search distances for government agency lists were those designated by the ASTM Standard E 1527-13.

## **1.6 Environmental Professionals**

This document has been prepared by an Environmental Professional as defined by the EPA, 40 CFR Part 312.10. All work performed for this assessment was performed by or under the direct supervision of an Environmental Professional.

## 2 SITE DESCRIPTION

Mr. Eric Fraske of NV5, conducted a site reconnaissance on January 27, 2022. The descriptions provided herein are based on information provided by the current site representatives and on observations made during that visit. Representative site photographs are included in Appendix A. Site Location and Site Layout maps depicting the areas and features described in the following sections are also provided in Figures 1 and 2.

## 2.1 Property Location and Use

## 2.1.1 Location and Size

The Site is located at 2401 14<sup>th</sup> Street in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 6.1 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4284-038-900.

## 2.1.2 Use

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows), playground areas, and a garden area in the southeast portion of the site.

## 2.2 Utility Service Providers

The utilities servicing the Site are:

Electricity	Southern California Edison
Water	City of Santa Monica
Gas	Southern California Gas Company
Sewer	Santa Monica Public Works
Municipal Waste	City of Santa Monica Public Works Department, Resource and Recycling
	Division
Hazardous Waste	N/A

No water wells or septic systems were observed or reported to be present at the Site during the site reconnaissance.

## 2.3 Hazardous Materials and Chemical Storage Areas

Small quantities of household cleaning products were observed and reported to be present at the Site in janitorial closets and storage areas. No evidence of spills, leaks, or releases of these materials was observed during the site reconnaissance. Their presence is not considered to represent a REC.

## 2.3.1 Drums

No evidence of hazardous materials in drums on the Site was observed.

## 2.4 Storage Tanks

#### 2.4.1 Aboveground Storage Tanks (ASTs)

No evidence of ASTs at the Site was observed or reported during the site reconnaissance.

## 2.4.2 Underground Storage Tanks (USTs)

No evidence of USTs at the Site was observed or reported during the site reconnaissance.

#### 2.4.3 Septic Tanks

No evidence of septic tanks was observed onsite or reported during the site reconnaissance.

## 2.5 Polychlorinated Biphenyls

Several pole-mounted electrical transformers were observed along the adjoining properties. No evidence of a past release from the transformers was observed or reported during the Site reconnaissance.

## 2.6 Floor Drains, Sumps, and Clarifiers

No clarifiers or sumps were observed or reported to be on the Site. Floor drains were observed in kitchen and restroom areas, however no evidence of spills or leaks into the floor drain was observed during the site reconnaissance.

## 2.7 Back-Up Power Generators

No fixed back-up power generators were observed or reported to be on the Site.

## 2.8 Cooling Towers

No cooling towers were observed or reported to be on the Site.

## 2.9 Elevators, Lifts and Compactors

A wheelchair lift is present on the side of the stage in the auditorium. The lift appeared to be in good condition with no evidence of past leaks or releases.

## 2.10 Odors

No strong, pungent, or noxious odors indicative of a past release of hazardous substances or petroleum products were identified during this assessment.

## 2.11 Pools of Liquid

No standing surface water or other pits, ponds, or lagoons potentially containing hazardous substances or petroleum products were identified within the Site.

#### 2.12 Surface Staining

No surface staining indicative of a past release of hazardous substances or petroleum products was identified within the Site.

## 2.13 Stressed Vegetation

No stressed vegetation or other indications of potential release of hazardous substances or petroleum products were observed during the site reconnaissance.

## 2.14 Solid Waste

No indications of unauthorized dumping of trash, construction or demolition debris, or other solid waste disposal were identified during the site reconnaissance.

## 2.15 Adjacent Sites

The Site is located within an area developed for residential use. The following land use in the near vicinity of the property was observed:

Direction	Property Name	Property Address	Business Operation
Northwest	N/A	2323 14 <sup>th</sup> Street	Multi-Family Residential
Northwest	N/A	2326 16 <sup>th</sup> Street	Multi-Family Residential
Northeast	John Adams Middle School	2425 16 <sup>th</sup> Street	Public Middle School
Ocuthocot	N/A	2433 14 <sup>th</sup> Street	Single-Family Residential
Southeast	N/A	1411-1507 Maple Street	Multi-Family & Single- Family Residential
	N/A	1352 Cedar Street	Single-Family Residential
Southwest	N/A	1351 Pine Street	Single-Family Residential
	N/A	1352 Pine Street	Single-Family Residential

## **3 SITE SETTING**

## 3.1 Topographic

The 2018 United States Geological Survey (USGS), [Beverly Hills] 7.5 Minute Topographic Quadrangle map of the Site and surrounding vicinity was reviewed. The elevation of the property is approximately 139 feet above mean sea level. Topography was observed to slope slightly in a southerly direction during the site reconnaissance. A copy of the USGS 7.5 Minute Topographic Quadrangle Map is included in Appendix B.

## 3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented on the EDR GeoCheck report (2022) and Regional Water Quality Control Board's online *Geotracker* database.

According to United States Department of Agriculture (USDA) soil data published in the EDR GeoCheck report, soils underlying the Site are classified as urban land. Soils of this type are a mixture of clayey, silty, sandy, and gravelly loam (Appendix B).

Groundwater data published on the *Geotracker* website for an ongoing groundwater investigation at the NASA Oil Company facility located at 2120 Lincoln Boulevard (approximately ½ mile southwest of the

Site) indicated that the shallowest groundwater in the vicinity of the Site is approximately 56 to 81 feet below ground surface and flows towards the south.

## 3.3 Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the site-specific Environmental Data Resources (EDR) Geocheck Report, the Site is not located within a 100-year or 500-year flood zone (EDR, 2021). The EDR Report is presented as Appendix B.

## 3.4 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory (<u>https://www.fws.gov/wetlands/data/mapper.html</u>), No wetlands are mapped on the subject or adjoining properties (Appendix C).

## 3.5 Water Bodies

No water bodies were observed on the subject or adjoining properties.

## 3.6 Oil and Gas Wells

According to the State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) oil and gas well finder map (WellSTAR), no oil/gas wells were identified on the Site.

## 4 USER-PROVIDED INFORMATION

Information obtained during the interview process is presented in the following sections.

## 4.1 Title Records

Title records were not provided by the site user representative. Chain of Title Records were obtained by NV5 and are presented in Appendix D. The current owner is listed as Santa Monica-Malibu Unified School District. No vesting deeds prior to 1940 were found during a search of Los Angeles County Recorder's and Assessor's offices. To Orders of Condemnation (1947 and 1948) were identified with property title's being vested in the Santa Monica City School District of Los Angeles County and title being received from Raymond G. Keplinger, ET AL and Ervin F. Yuan, ET AL.

## 4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site was reported by those interviewed. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

## 4.3 Activities and Use Limitations

No knowledge of site-specific activities or use limitations recorded against the Site were reported by those interviewed. Furthermore, according to the EDR Lien and AUL Search report, no Activity and Use Limitations are identified for the Site (Appendix D).

## 4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

## 4.5 Commonly Known Information

No commonly known information identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

## 4.6 Previous Environmental Assessments

The client did not provide NV5 with copies of a previous Phase I ESA, Property Condition Assessment Report, and Visible Mold assessment.

These documents are summarized below and presented in Appendix F.

## 5 RECORDS REVIEW

## 5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in EDR's Radius Map Report, which can be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southeasterly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous material can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

#### 5.1.1 Site Database Findings

EDR's report did identify the Site address, as summarized below:

Facility Name & Address	Will Rogers Elementary School/SMMUSD-Rogers Elementary/Santa Monica-Malibu USD 2401 14 <sup>th</sup> Street Santa Monica, California	Site	
Database(s) L	isted: HWTS, HWTS HAZNET, RCRA NONGEN/NLR, FINDS, EC	HO	
identified. Ac asbestos cont waste in 2017 and 0.05 tons	The Site address was listed on the FINDS and ECHO databases; however, no violations have been identified. According to the two HWTZ HAZNET database listings, this facility disposed of; 1.0 tons of asbestos containing waste in 1994, 88.5 tons of inorganic solid waste in 2017, 27 tons of inorganic solid waste in 2017, 29 .5 tons of inorganic solid waste in 2018, 30.3 tons of inorganic solid waste in 2017, and 0.05 tons of organic solids in 2009. The RCRA NONGEN/NLR database listings show that this facility is not listed as a handler of nonhazardous or hazardous waste.		

#### 5.1.2 Adjoining Property Database Findings

EDR's report identified multiple adjoining properties. The details of these listings are presented below.

FacilityJohn Adams Middle SchoolName &2425 16th StreetAddressSanta Monica, California	Northeastern Adjoining Property
---	------------------------------------

Database(s) Listed: RCRA NONGEN/NLR, HWTS, ENVIROSTOR, SCH, HAZNET, NPDES, CERS

This property address was listed on the ENVIROSTOR database due to lead concentrations identified in three shallow soil samples at 0.5 feet bgs (94.3 mg/kg, 92.8 mg/kg, and 157 mg/kg) and one shallow soil sample at 2.5 feet bgs (99.3 mg/kg) that exceeded the screening level during an assessment completed in March 2018. In August of 2019, approximately 10.5 cubic yards of lead contaminated soil that exceeded the screening level of 80 mg/kg were excavated and disposed of offsite. A No Further Action was issued to the property on September 25, 2019. The HAZNET listing indicates that approximately 0.33 tons of PCB containing material was removed from the property in 1994, and 0.28 tons of PCB containing material removed in 1995. The RCRA NONGEN/NLR database listings show that this facility is not listed as a handler of nonhazardous or hazardous waste.

#### 5.1.3 General Vicinity Database Findings

EDR's report identified multiple off-site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the site;
- When the site was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

## 5.2 Regional Agency Offices

NV5 submitted information requests to the various county and regional agencies that may have records with regard to environmentally-oriented concerns affecting the Site, in accordance with ASTM E1527-13 requirements. Should significant records be identified at a later date, an addendum to this report will be issued. Documentation obtained from regulatory agency requests is presented in Appendix C.

Agency	Records Summary
California Division of Geologic Energy Management (CalGEM)	No oil or gas wells were identified on the Site or adjoining properties.
Regional Water Quality Control Board – GEOTRACKER	Site No records identified. Adjoining Property No records identified.

Agency	Records Summary
Department of Toxic Substances Control – ENVIROSTOR	<u>Site</u> No records identified. <u>Adjoining Property</u> Several environmental reports were reviewed for the northeast adjoining property at John Adams Middle School. A Report of Findings – Sampling for Lead, Pesticides, and PCBs in Soil by Converse Consultants dated March 23, 2018, found that four shallow soil samples (three at 0.5 feet bgs and one at 2.5 feet bgs) contained lead concentrations of 94.3 mg/kg, 92.8 mg/kg, 157 mg/kg, and 99.3 mg/kg exceeded the screening level of 80 mg/kg. Arsenic, OCPs, and PCB were also detected, however, the analytical results were below screening levels for each contaminant of concern. In August of 2019, approximately 10.5 cubic yards of lead contaminated soil was excavated and disposed of offsite.
Santa Monica Fire Department	No records identified.
City of Santa Monica Building and Safety Department	No records identified.

## 5.3 Historical Records

NV5 used USGS Topo maps, aerial photographs, fire insurance maps, and historical street directories to provide information about the history of the Site and its surroundings. The resources NV5 reviewed are tabulated below and presented in Appendix E.

## 5.4 Past Uses – Site

Our interpretation of past uses of the property, based on the historical data sources listed above, are tabulated below.

Date	Interpreted Property Use	
1894 to 1921	<sup>1</sup> USGS Topo maps, Sanborn maps, and aerial photographs depict the Site to be vacant and undeveloped land.	
1924 to 1938	USGS Topo maps and aerial photographs depict the Site to be developed with residential homes.	
1924 to 1938       USGS Topo maps and aerial photographs depict the Site to be developed with residential homes.         USGS Topo maps, Sanborn maps, and aerial photographs depict the Site to be developed with the Will Rogers Elementary School. A small church structure and associated parking area are depicted on the southeastern corner of the Site.         Historic city directories identified the tenant of the property as:         2401 14 <sup>th</sup> Street         • Santa Monica Unified School District (1954 through 1970)         • Santa Monica-Malibu Unified School District (1985 through 2014)         • Santa Monica City College (1958)         • Will Rodgers School (1954 through 1980)         • Zatzkis Mart (2006)         1515 Maple Street         • Sunset Park Christian Church (1954 through 2000)         • Circle of Children Kindergarten (1999 through 2014)         • Jolt (1994)		
2019	Google Earth imagery depicts the portion of the Site previously developed with a church to be vacant with no structures.	

**5.5** Past Uses – Adjoining Properties Our interpretation of past uses of the adjoining properties, based on the historical data sources listed previously, are tabulated below.

Date	Description			
Northwest Adjo	Northwest Adjoining Properties			
1894 to 1921	USGS Topo maps depict the property to be vacant undeveloped land			
	USGS Topo maps, Sanborn maps, and aerial photographs depict the Site to be developed with residential homes.			
	Historic city directories identified the tenants of the property as:			
1924 to 2016	<ul> <li><u>2323 14<sup>th</sup> Street</u></li> <li>Various residential tenants/owners (1928 through 2014)</li> </ul>			
	<ul> <li><u>2326 16th Street</u></li> <li>Various residential tenants/owners (1958 through 2014)</li> </ul>			
Northeast Adjo	ining Property			
1894 to 1928	USGS Topo maps and an aerial photograph depict the property to be vacant and undeveloped land.			
	USGS Topo maps, Sanborn maps, and aerial photographs depict the Site to be developed with the John Adams Junior High School. The property is still occupied by this school.			
	Historic city directories identified the tenant of the property as:			
	2425 16 <sup>th</sup> Street			
	<ul> <li>Santa Monica Unified School District (1954 through 1970)</li> <li>Santa Monica City College (1958)</li> </ul>

## 5.6 Interviews

NV5 interviewed parties potentially having information about current and/or former conditions at the Site. The parties and their affiliation are tabulated on the following page.

Interviews		
Name	Affiliation	Role
Julian Capata	SMMUSD	Client/User
Matthew Smith	SMMUSD	Site Contact/Site Representative

No evidence of a REC in connection with the Site was disclosed during the abovementioned interviews. Pertinent information collected during these interviews has been incorporated throughout the report where appropriate. Interview records are presented in Appendix F.

## 6 NON-SCOPE CONSIDERATIONS

Per the authorized scope of work, items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment. These items included several items, listed on the following page, that address specific California Department of Education (CDE) requirements for school construction.

Table 1 CDE Requirements	
Regulation/Code	Description
Ed. Code § 17213 (a)	The school district, as the lead agency, as defined in Section 21067 of the Public Resources Code, determines that the property purchased or to be built upon is not any of the following:
Ed. Code § 17213 (a)(1)	The site of a current or former hazardous waste disposal site or solid waste disposal site, unless if the site was a former solid waste disposal site, the governing board of the school district concludes that the wastes have been removed.
Source: Envirostor <u>https://www.envirostor.dtsc.ca.gov/publi</u> <u>c/</u> GeoTracker <u>https://geotracker.waterboards.ca.gov/</u>	Historical records reviewed during the Phase I ESA and regulatory records reviewed on the Envirostor and GeoTracker website did not identify the Site as a hazardous waste disposal site or solid waste disposal site.
Ed. Code § 17213(a)(2)	A hazardous substance release site identified by the Department of Toxic Substances Control in a current list adopted pursuant to Section 25356 of the Health and Safety Code for removal or remedial action pursuant to Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code.
Source: Envirostor <u>https://www.envirostor.dtsc.ca.gov/publi</u> <u>c/</u> GeoTracker <u>https://geotracker.waterboards.ca.gov/</u>	Historical records reviewed during the Phase I ESA and regulatory records reviewed on the Envirostor and GeoTracker website did not identify the Site as a hazardous substance release site.

Table 1 CDE Requirements	
Regulation/Code	Description
Ed. Code § 17213(a)(3)	A site that contains one or more pipelines, situated underground or aboveground, that carries hazardous substances, extremely hazardous substances, or hazardous wastes, unless the pipeline is a natural gas line that is used only to supply natural gas to that school or neighborhood.
Source:	
Phase I ESA Report National Pipeline Mapping System <u>https://pvnpms.phmsa.dot.gov/PublicVie</u> wer/	Site interviews and regulatory records reviewed during the Phase I ESA and regulatory records reviewed on the National Pipeline Mapping System website did not identify the presence of pipelines that carry hazardous substances or wastes at the Site.
5 CCR § 14010	All districts shall select a school site that provides safety and that supports learning. The following standards shall apply:
5 CCR § 14010(c)	The property line of the site even if it is a joint use agreement as described in subsection (o) of this section shall be at least the following distance from the edge of respective power line easements: (1) 100 feet for 50-133 kV line. (2) 150 feet for 220-230 kV line. (3) 350 feet for 500-550 kV line.

Table 1 CDE Requirements	
Regulation/Code	Description
Source: Phase I ESA Report	
California Energy Commission <u>https://cecgis-</u> <u>caenergy.opendata.arcgis.com/datasets</u> /california-electric-transmission- <u>lines/explore?location=34.029085%2C-</u> <u>118.468548%2C13.93</u>	Regulatory records reviewed during the Phase I ESA and regulatory records reviewed on the California Energy Commission website did not identify the presence of power line easements within 350 feet of the Site.
5 CCR § 14010(d)	If the proposed site is within 1,500 feet of a railroad track easement, a safety study shall be done by a competent professional trained in assessing cargo manifests, frequency, speed, and schedule of railroad traffic, grade, curves, type and condition of track need for sound or safety barriers, need for pedestrian and vehicle safeguards at railroad crossings, presence of high pressure gas lines near the tracks that could rupture in the event of a derailment, preparation of an evacuation plan. In addition to the analysis, possible and reasonable mitigation measures must be identified.
Source:	
Phase I ESA Report	Regulatory records reviewed during the Phase I ESA and regulatory records reviewed on the Open Railway Map website did not identify the presence of a railroad track within 1,500 feet of the
OpenRailwayMap https://www.openrailwaymap.org/	Site.
5 CCR § 14010(f)	Pursuant to Ed. Code §§ 17212 and 17212.5, the site shall not contain an active earthquake fault or fault trace.

Table 1 CDE Requirements	
Regulation/Code	Description
Source: Phase I ESA Report Client Provided Geotechnical Report Geotechnical Investigation Report – New Early Education/Kindergarten Classroom Building. Will Rogers Elementary School, 2401 14 <sup>th</sup> Street, Santa Monica, Los Angeles County, California. Prepared by Converse Consultants. Dated October 20, 2021.	According to the Client provided geotechnical report, "The project site is not located within a currently designated State of California Earthquake Fault Zone for surface fault rupture. No surface faults are known to project through or towards the site.
5 CCR § 14010(g)	Pursuant to Ed. Code §§ 17212 and 17212.5, the site is not within an area of flood or dam flood inundation unless the cost of mitigating the flood or inundation impact is reasonable.
Source: Phase I ESA Report California Division of Safety of Dams <u>https://fmds.water.ca.gov/maps/damim/</u> FEMA Flood Map Service Center: <u>https://msc.fema.gov/portal/search?Add</u> <u>ressQuery=2401%20santa%20monica</u> <u>%20boulevard%2C%20santa%20monic</u> <u>a%2C%20ca#searchresultsanchor</u>	According to Dam Breach Inundation Maps published on the California Division of Safety of Dams (DSOD) website, the Site is not located within a dam breach inundation boundary. Review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Map Number 06037X1588G, effective date April 21, 2021, from the Map Service Center (MSC) viewer, indicates that the site is designated as Zone "X", "Area of minimal flood hazard".
5 CCR § 14010(h)	The site shall not be located near an above-ground water or fuel storage tank or within 1,500 feet of the easement of an above ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional, which may include certification from a local public utility commission.

Table 1 CDE Requirements	
Regulation/Code	Description
Source:	
Phase I ESA Report	Site reconnaissance and regulatory records reviewed during the Phase I ESA did not identify the presence of above-ground water or fuel storage tanks on adjacent properties.
National Pipeline Mapping System https://pvnpms.phmsa.dot.gov/PublicVie wer/	Regulatory records reviewed on the National Pipeline Mapping System website did not identify the presence of a pipeline within 1,500 feet of the Site.
5 CCR § 14010(i)	The site is not subject to moderate to high liquefaction or landslides.
Source: Phase I ESA Report Client Provided Geotechnical Report Geotechnical Investigation Report – New Early Education/Kindergarten Classroom Building. Will Rogers Elementary School, 2401 14 <sup>th</sup> Street, Santa Monica, Los Angeles County, California. Prepared by Converse Consultants. Dated October 20, 2021.	According to the Client provided geotechnical report, "The site is not located within a mapped potential liquefaction zone per the State of California Seismic Hazard Zones Map for the Beverly Hills Quadrangle (2018) as shown in Figure No. 7, Seismic Hazard Zones Map." Furthermore, "Seismically induced landslides and other slope failures are common occurrences during or soon after earthquakes. The project site is relatively flat. In the absence of significant ground slopes, the potential for seismically induced landslides to affect the proposed site is considered to be nil."
5 CCR § 14010(m)	Existing or proposed zoning of the surrounding properties shall be compatible with schools in that it would not pose a potential health or safety risk to students or staff in accordance with Ed. Code § 17213 and Gov. Code § 65402 and available studies of traffic surrounding the site.
Phase I ESA	
City of Santa Monica SaMoMap https://samomap.santamonica.gov/Html 5Viewer/index.html?viewer=SaMoMAP Public.Viewer	The type of on-site land uses would not change over existing conditions. The Project is consistent with the City of Santa Monica zoning designation of the Project site, which is R-2 (Two-Unit Residential) with a Public Lands Overlay District, as well as the General Plan designation of Public Land.

Table 1 CDE Requirements	
Regulation/Code	Description
5 CCR § 14010(r)	Easements on or adjacent to the site shall not restrict access or building placement.
Appendix D EDR Chain of Title Report	<ul> <li>NV5 subcontracted EDR to obtain title documentation from the Los Angeles County Recorder's Office. According to this information:</li> <li>1) A Grant of Easement was given to GTE California Incorporated in 1995 for underground electrical facilities.</li> <li>2) A Grant of Easement was given to Southern California Edison in 1994 for underground electrical facilities.</li> <li>3) A Quit Claim Deed – Easement was given by the Bank of America National Trust and Savings Association to the General Telephone Company of California in 1957 for the easement of electrical and communication pole lines and conduits.</li> <li>4) A License – Grant of Easement was issued by the Santa Monica District of Los Angeles County in 1949 to Southern California Edison for the construction, use, and maintenance of electrical and communication pole lines and conduits.</li> <li>Copies of the easement documents are included in the report and include locations of the easements as well as requirements for access and future construction.</li> </ul>
5 CCR § 14010(s)(2)	The cost and complications of the following shall be considered in the site selection process and should not result in undue delays or unreasonable costs consistent with State Allocation Board standards: Site preparation including grading, drainage, demolition, hazardous cleanup, including cleanup of indigenous material such as serpentine rock, and off-site development of streets, curbs, gutters, and lights.
Source:	Findings and conclusions regarding the presence of potential hazardous materials that may be
Phase I ESA Report	encountered during earthmoving and demolition activities at the Site are presented in the Executive Summary and Conclusion Section of the Phase I report.
USGS <u>Map Sheet 59: Reported</u> <u>Historic Asbestos Mines, Historic</u> <u>Asbestos Prospects, and other</u> <u>Natural Occurrences of Asbestos in</u> <u>California</u>	According to the <i>Map Sheet 59: Reported Historic Asbestos Mines, Historic Asbestos Prospects, and other Natural Occurrences of Asbestos in California,</i> no historic asbestos mines or ultramafic rock locations are mapped within the general vicinity of the Site.

Table 1 CDE Requirements	
Regulation/Code	Description
5 CCR § 14010(t)	If the proposed site is on or within 2,000 feet of a significant disposal of hazardous waste, the school district shall contact the Department of Toxic Substances Control for a determination of whether the property should be considered a Hazardous Waste Property or Border Zone Property.
Source:	
Envirostor <u>https://www.envirostor.dtsc.ca.gov/publi</u> <u>c/</u> GeoTracker <u>https://geotracker.waterboards.ca.gov/</u>	Historical records reviewed during the Phase I ESA and regulatory records reviewed on the Envirostor and GeoTracker website did not identify the Site to be located on or within 2,000 feet of a hazardous waste disposal site or solid waste disposal site.
5 CCR § 14011(i)	Consult with, or demonstrate that the lead agency, has consulted with the appropriate city/county agency and with any air pollution control district or air quality management district having jurisdiction, concerning any facilities having hazardous or acutely hazardous air emissions within one-fourth of a mile of the proposed school site as required by Ed. Code § 17213.
Source: Appendix C South Coast Air Quality Management District – April 8, 2022 Response Letter	NV5 submitted a Grid Search Request to the South Coast Air Quality Management District (SCAQMD) to identify all AQMD permitted facilities with the potential to emit hazardous air pollutants located within ¼ mile of the Site. The SCAQMD responded to the request in a letter dated April 8, 2022, indicating that two permitted facilities were identified within ¼ mile of the Site. The identified facilities have permits to operate diesel-fired emergency backup electrical generators.
5 CCR § 14011(j)	For purposes of Environmental Site Assessment, school districts shall comply with Ed. Code §§ 17210.1, 17213.1, and 17213.2.
Phase I ESA	A Phase I ESA report of the Site has been prepared in accordance with the requirements described in the Ed. Code.
5 CCR § 14011(k)	Follow the recommendations of the State Superintendent of Public Instruction report based upon the Department of Transportation, Division of Aeronautics, findings, if the proposed site is within two miles of the center line of an airport runway or proposed runway as required by Ed. Code § 17215.

Table 1 CDE Requirements	
Regulation/Code	Description

## 7 VAPOR ENCROACHMENT SCREENING

ASTM E1527-13 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527-13 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-15), which outlines an ASTM E1527-13compliant methodology to conduct vapor encroachment screening.

## 7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the environmental professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The environmental professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the environmental professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum contaminated sites and 528 feet (1/10 miles) for petroleum contaminated sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the environmental professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

## 7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii, based on our review of governmental database records, regulatory agency files, and historical resources referenced in Section 5.3. However, based on our review of available information, none of these sites appear to represent a VEC in connection with the Site.

## 8 FINDINGS

Based on the site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

## 8.1 Current Site Activities

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

## 8.2 Historical Site Activities

The Site was previously undeveloped prior to 1921. By 1928, several residential homes had been constructed on the Site. Between 1938 and 1950, the Site had was redeveloped with the Will Rogers Elementary School.

## 8.3 Off-Site Activities

The Site is located within an area primarily for mixed commercial and residential use. Current uses of adjoining properties include residential developments to the northwest, southeast, and southwest, a middle school to the northeast.

## 8.4 Data-Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any data gaps.

## 9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of the Will Rogers Elementary School located at 2401 14<sup>th</sup> Street in Santa Monica, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site.

- No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.
- NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

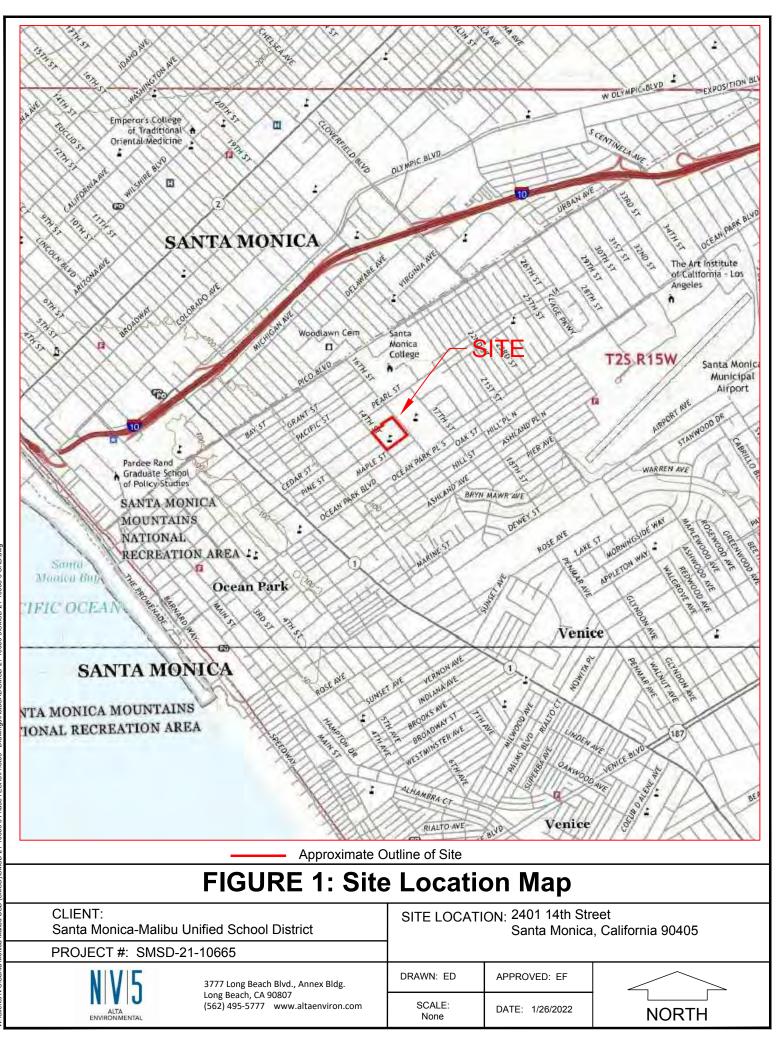

## **10 QUALIFICATIONS AND SIGNATURE**

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

ERIC FRASKE, PE SENIOR ENGINEER/SENIOR PROJECT MANAGER

#### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### STANDARD ENVIRONMENTAL RECORDS

#### Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

#### Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

#### Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

#### Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

#### ADDITIONAL ENVIRONMENTAL RECORDS

#### Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 07/22/2021 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

#### Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

#### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

#### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
EDISON/SANTA MONICA	819 COLORADO AVE	WNW 1/2 - 1 (0.947 mi.)	T82	389

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description:	Chemical Storage Facilities
olations:	
Site ID:	151023
Site Name:	Santa Monica Community College District - SMC Maintenance Facility
Violation Date:	09-29-2016
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter
	1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	Returned to compliance on 02/03/2017. OBSERVATION: Hazardous waste
	storage area (Maintenance and Science Department Area) had the last
	weekly area inspection on 09/03/15 by Risk & Insurance Coordinator.
	The owner or operator shall inspect areas used for container storage
	or transfer, at least weekly, looking for leaking containers and for
	deterioration of containers and the containment system caused by
	corrosion and other factors. CORRECTIVE ACTION: Immediately begin
	conducting the necessary weekly inspections for all hazardous waste
	containers at this facility.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. STATE MASTER

IER AUTO WRECKING (Con	tinued)	S101481054
Completed Document Type: Completed Date: Comments:	Site Screening 01/10/1994 The City of Santa Monica, Environmental Programs Division submitted a site remediation report to the Department. City certified that no further activities be required at the site. On December 21, 1992, the city assumed the oversight of site assessment and remedial activities. City certified that the assessment and subsequent remediation were conducted in accordance with or in a manner exceeding standards set forth in Title 22 of the CCR.	
Completed Area Name: Completed Sub Area Name: Completed Document Type: Completed Date: Comments:	PROJECT WIDE Not reported Site Screening 10/27/1992 The site is a City of Santa Monica Development Project. The site investigation report submitted to the Department shows evidence of TPH contamination at the site. The results of the Phase I assessment indicated the potential for soil contamination and groundwater contamination due to the past land use and gw contamination from an unauthorized gasoline release at the adjecent Bonus Car Wash. Groundwater was encountered at 10-12 feet bags. Staff recommends PEA due to the evidence of contamination.	N

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

## EDISON/SANTA MONICA MGP (Continued)

	SUN/SANTA MUNICA MGP (C	continued)	5102
	Comments:	The Southern California Edison's former manufactured gas plant (MGP) was operated at the site from 1900 to 1903 and dismantled prior to 1909. MGPs such as the subject facility in Santa Monica were operated by various utility companies from the 1800s to the mid-1900s to produce gas from coal or oil. The gas manufacturing and purification processed yielded various byproducts or residues, consisting of lampblack, light oils, tars, sludges, and other petroleum products. During the investigtion, polynuclear aromatic hydrocarbons (PAHs) and metals were detected. The Dept. received a PEA report on May 14, 1992. On August 24, 1992 the Department completed review of the PEA. The PEA recommended "No Further Action" was needed at the site. The PAH concentration at the site exceeded the PEA screening values. Therefore, the Department recommended that "Further Action" was necessary at the site.

Comments:	The Southern California Edison's former manufactured gas plant (MGP)
	was operated at the site from 1900 to 1903 and dismantled prior to
	1909. MGPs such as the subject facility in Santa Monica were operated
	by various utility companies from the 1800s to the mid-1900s to
	produce gas from coal or oil. The gas manufacturing and purification
	processed yielded various byproducts or residues, consisting of
	lampblack, light oils, tars, sludges, and other petroleum products.
	During the investigtion, polynuclear aromatic hydrocarbons (PAHs) and
	metals were detected. The Dept. received a PEA report on May 14,
	1992. On August 24, 1992 the Department completed review of the PEA.
	The PEA recommended "No Further Action" was needed at the site. The
	PAH concentration at the site exceeded the PEA screening values.
	Therefore, the Department recommended that "Further Action" was
	necessary at the site.

## **GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

#### Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24 Source: EPA Telephone: N/A Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/11/2022 Data Release Frequency: Quarterly

**NPL Site Boundaries**

EPA Region 10 Telephone 206-553-8665 EPA Region 6 Telephone: 214-655-6659

EPA Region 7 Telephone: 913-551-7247

EPA Region 8 Telephone: 303-312-6774

EPA Region 9 Telephone: 415-947-4246

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24 Source: EPA Telephone: N/A Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/11/2022 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56 Source: EPA Telephone: 202-564-4267 Last EDR Contact: 08/15/2011 Next Scheduled EDR Contact: 11/28/2011 Data Release Frequency: No Update Planned

## Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24 Source: EPA Telephone: N/A Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/11/2022 Data Release Frequency: Quarterly

## Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021	Source:

## SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/25/2022 Data Release Frequency: Quarterly

#### Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## **GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/25/2022 Data Release Frequency: Quarterly

#### Lists of Federal RCRA facilities undergoing Corrective Action

#### CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/13/2021	Source: EPA
Date Data Arrived at EDR: 09/15/2021	Telephone: 800-424-9346

## Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 10/12/2021 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

#### Lists of Federal RCRA generators

## RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 10/12/2021 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

## **GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

#### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 10/12/2021 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators) RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 10/12/2021 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

#### Federal institutional controls / engineering controls registries

#### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 07/12/2021Source: Department of the NavyDate Data Arrived at EDR: 08/06/2021Telephone: 843-820-7326Date Made Active in Reports: 10/22/2021Last EDR Contact: 11/08/2021Number of Days to Update: 77Next Scheduled EDR Contact: 02/21/2022Data Release Frequency: Varies

## US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/23/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/23/2021	Telephone: 703-603-0695
Date Made Active in Reports: 11/12/2021	Last EDR Contact: 11/18/2021
Number of Days to Update: 81	Next Scheduled EDR Contact: 03/06/2022
	Data Release Frequency: Varies

## US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/23/2021 Date Data Arrived at EDR: 08/23/2021 Date Made Active in Reports: 11/12/2021 Number of Days to Update: 81 Source: Environmental Protection Agency Telephone: 703-603-0695 Last EDR Contact: 11/19/2021 Next Scheduled EDR Contact: 03/07/2022 Data Release Frequency: Varies

### Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/21/2021 Date Made Active in Reports: 12/15/2021 Number of Days to Update: 85 Source: National Response Center, United States Coast Guard Telephone: 202-267-2180 Last EDR Contact: 12/16/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

### Lists of state- and tribal (Superfund) equivalent sites

# **RESPONSE: State Response Sites**

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 07/22/2021	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 07/22/2021	Telephone: 916-323-3400
Date Made Active in Reports: 10/08/2021	Last EDR Contact: 10/26/2021
Number of Days to Update: 78	Next Scheduled EDR Contact: 02/07/2022
	Data Release Frequency: Quarterly

### Lists of state- and tribal hazardous waste facilities

## ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/22/2021 Date Data Arrived at EDR: 07/22/2021 Date Made Active in Reports: 10/08/2021 Number of Days to Update: 78 Source: Department of Toxic Substances Control Telephone: 916-323-3400 Last EDR Contact: 10/26/2021 Next Scheduled EDR Contact: 02/07/2022 Data Release Frequency: Quarterly

## Lists of state and tribal landfills and solid waste disposal facilities

### SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or i nactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

### Lists of state and tribal brownfield sites

BROWNFIELDS: Considered Brownfieds Sites Listing

A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 09/20/2021 Date Data Arrived at EDR: 09/21/2021 Date Made Active in Reports: 12/08/2021 Number of Days to Update: 78 Source: State Water Resources Control Board Telephone: 916-323-7905 Last EDR Contact: 12/16/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

### ADDITIONAL ENVIRONMENTAL RECORDS

### Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/10/2021 Date Data Arrived at EDR: 06/10/2021 Date Made Active in Reports: 08/17/2021 Number of Days to Update: 68 Source: Environmental Protection Agency Telephone: 202-566-2777 Last EDR Contact: 12/08/2021 Next Scheduled EDR Contact: 03/28/2022 Data Release Frequency: Semi-Annually

### Local Lists of Landfill / Solid Waste Disposal Sites

### WMUDS/SWAT: Waste Management Unit Database

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

## Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 05/18/2021	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 05/18/2021	Telephone: 202-307-1000
Date Made Active in Reports: 08/03/2021	Last EDR Contact: 11/16/2021
Number of Days to Update: 77	Next Scheduled EDR Contact: 03/07/2022
	Data Release Frequency: No Update Planned

# HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005 Date Data Arrived at EDR: 08/03/2006 Date Made Active in Reports: 08/24/2006 Number of Days to Update: 21 Source: Department of Toxic Substance Control Telephone: 916-323-3400 Last EDR Contact: 02/23/2009 Next Scheduled EDR Contact: 05/25/2009 Data Release Frequency: No Update Planned

# SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/22/2021 Date Data Arrived at EDR: 07/22/2021 Date Made Active in Reports: 10/08/2021 Number of Days to Update: 78 Source: Department of Toxic Substances Control Telephone: 916-323-3400 Last EDR Contact: 10/26/2021 Next Scheduled EDR Contact: 02/07/2022 Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2019 Date Data Arrived at EDR: 01/20/2021 Date Made Active in Reports: 04/08/2021 Number of Days to Update: 78 Source: Department of Toxic Substances Control Telephone: 916-255-6504 Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/18/2022 Data Release Frequency: Varies

# CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 10/18/2021
Date Data Arrived at EDR: 10/19/2021
Date Made Active in Reports: 01/12/2022
Number of Days to Update: 85

Source: CalEPA Telephone: 916-323-2514 Last EDR Contact: 10/19/2021 Next Scheduled EDR Contact: 01/31/2022 Data Release Frequency: Quarterly

# TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995 Date Data Arrived at EDR: 08/30/1995 Date Made Active in Reports: 09/26/1995 Number of Days to Update: 27 Source: State Water Resources Control Board Telephone: 916-227-4364 Last EDR Contact: 01/26/2009 Next Scheduled EDR Contact: 04/27/2009 Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/18/2021	Source: Drug Enforcement Administration

CERS TANKS: California Environmental Reporting System (CERS) Tanks

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

Date of Government Version: 10/18/2021 Date Data Arrived at EDR: 10/19/2021 Date Made Active in Reports: 01/12/2022 Number of Days to Update: 85

Source: California Environmental Protection Agency Telephone: 916-323-2514 Last EDR Contact: 10/19/2021 Next Scheduled EDR Contact: 01/31/2022 Data Release Frequency: Quarterly

# CA FID UST: Facility Inventory Database

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/1994	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 09/05/1995	Telephone: 916-341-5851
Date Made Active in Reports: 09/29/1995	Last EDR Contact: 12/28/1998
Number of Days to Update: 24	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

# Local Land Records

LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 08/25/2021	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 09/03/2021	Telephone: 916-323-3400
Date Made Active in Reports: 11/22/2021	Last EDR Contact: 11/22/2021
Number of Days to Update: 80	Next Scheduled EDR Contact: 03/14/2022
	Data Release Frequency: Varies

# LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24

Source: Environmental Protection Agency Telephone: 202-564-6023 Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 04/11/2022 Data Release Frequency: Semi-Annually

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 08/30/2021 Date Data Arrived at EDR: 08/31/2021 Date Made Active in Reports: 11/19/2021 Number of Days to Update: 80 Source: DTSC and SWRCB Telephone: 916-323-3400 Last EDR Contact: 11/30/2021 Next Scheduled EDR Contact: 03/14/2022 Data Release Frequency: Semi-Annually

# **Records of Emergency Release Reports**

HMIRS: Hazardous Materials Information Reporting System Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 09/12/2021	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 09/13/2021	Telephone: 202-366-4555
Date Made Active in Reports: 09/28/2021	Last EDR Contact: 12/16/2021
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/04/2022
	Data Release Frequency: Quarterly

## CHMIRS: California Hazardous Material Incident Report System

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 09/30/2021	Source: Office of Emergency Services
Date Data Arrived at EDR: 10/19/2021	Telephone: 916-845-8400
Date Made Active in Reports: 01/12/2022	Last EDR Contact: 10/19/2021
Number of Days to Update: 85	Next Scheduled EDR Contact: 01/31/2022
	Data Release Frequency: Semi-Annually

# LDS: Land Disposal Sites Listing (GEOTRACKER)

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/07/2021 Date Data Arrived at EDR: 09/07/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 83 Source: State Water Quality Control Board Telephone: 866-480-1028 Last EDR Contact: 12/07/2021 Next Scheduled EDR Contact: 03/21/2022 Data Release Frequency: Quarterly

### MCS: Military Cleanup Sites Listing (GEOTRACKER)

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/07/2021 Date Data Arrived at EDR: 09/07/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 83 Source: State Water Resources Control Board Telephone: 866-480-1028 Last EDR Contact: 12/07/2021 Next Scheduled EDR Contact: 03/21/2022 Data Release Frequency: Quarterly

### SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012Source: FirstSearchDate Data Arrived at EDR: 01/03/2013Telephone: N/ADate Made Active in Reports: 02/22/2013Last EDR Contact: 01/03/2013Number of Days to Update: 50Next Scheduled EDR Contact: N/AData Release Frequency: No Update Planned

### Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 10/12/2021 Number of Days to Update: 27 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

## FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 08/10/2021 Date Data Arrived at EDR: 08/17/2021 Date Made Active in Reports: 10/22/2021 Number of Days to Update: 66 Source: U.S. Army Corps of Engineers Telephone: 202-528-4285 Last EDR Contact: 11/16/2021 Next Scheduled EDR Contact: 02/28/2022 Data Release Frequency: Varies

# DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 11/10/2006
Date Made Active in Reports: 01/11/2007

# SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Date of Government Version: 01/01/2017 Date Data Arrived at EDR: 02/03/2017 Date Made Active in Reports: 04/07/2017 Number of Days to Update: 63 Source: Environmental Protection Agency Telephone: 615-532-8599 Last EDR Contact: 11/08/2021 Next Scheduled EDR Contact: 02/21/2022 Data Release Frequency: Varies

US FIN ASSUR: Financial Assurance Information

All owners and operators of facilities that treat, store, or dispose of hazardous waste are required to provide proof that they will have sufficient funds to pay for the clean up, closure, and post-closure care of their facilities.

Date of Government Version: 09/13/2021 Date Data Arrived at EDR: 09/15/2021 Date Made Active in Reports: 09/28/2021 Number of Days to Update: 13 Source: Environmental Protection Agency Telephone: 202-566-1917 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 04/04/2022 Data Release Frequency: Quarterly

# EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013 Date Data Arrived at EDR: 03/21/2014 Date Made Active in Reports: 06/17/2014 Number of Days to Update: 88 Source: Environmental Protection Agency Telephone: 617-520-3000 Last EDR Contact: 11/01/2021 Next Scheduled EDR Contact: 02/14/2022 Data Release Frequency: Quarterly

# 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017 Date Data Arrived at EDR: 05/08/2018 Date Made Active in Reports: 07/20/2018 Number of Days to Update: 73 Source: Environmental Protection Agency Telephone: 703-308-4044 Last EDR Contact: 11/05/2021 Next Scheduled EDR Contact: 02/14/2022 Data Release Frequency: Varies

# TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2016 Date Data Arrived at EDR: 06/17/2020 Date Made Active in Reports: 09/10/2020 Number of Days to Update: 85 Source: EPA Telephone: 202-260-5521 Last EDR Contact: 12/17/2021 Next Scheduled EDR Contact: 03/28/2022 Data Release Frequency: Every 4 Years

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2018 Date Data Arrived at EDR: 08/14/2020 Date Made Active in Reports: 11/04/2020 Number of Days to Update: 82 Source: EPA Telephone: 202-566-0250 Last EDR Contact: 11/16/2021 Next Scheduled EDR Contact: 02/28/2022 Data Release Frequency: Annually

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 10/18/2021 Date Data Arrived at EDR: 10/20/2021 Date Made Active in Reports: 01/10/2022 Number of Days to Update: 82 Source: EPA Telephone: 202-564-4203 Last EDR Contact: 10/20/2021 Next Scheduled EDR Contact: 01/31/2022 Data Release Frequency: Annually

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 24

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 10/20/2021 Date Data Arrived at EDR: 11/05/2021 Date Made Active in Reports: 11/12/2021 Number of Days to Update: 7 Source: Environmental Protection Agency Telephone: 202-564-8600 Last EDR Contact: 10/18/2021 Next Scheduled EDR Contact: 01/31/2022 Data Release Frequency: Varies

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995 Date Data Arrived at EDR: 07/03/1995 Date Made Active in Reports: 08/07/1995 Number of Days to Update: 35 Source: EPA Telephone: 202-564-4104 Last EDR Contact: 06/02/2008 Next Scheduled EDR Contact: 09/01/2008 Data Release Frequency: No Update Planned

### **RADINFO:** Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019 Date Data Arrived at EDR: 07/01/2019 Date Made Active in Reports: 09/23/2019 Number of Days to Update: 84 Source: Environmental Protection Agency Telephone: 202-343-9775 Last EDR Contact: 12/27/2021 Next Scheduled EDR Contact: 04/11/2022 Data Release Frequency: Quarterly

# HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites Uranium ore was mined by private companie	es for federal government use in national defense programs. When the mills	

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

# ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Date of Government Version: 10/05/2021 Date Data Arrived at EDR: 10/06/2021 Date Made Active in Reports: 12/29/2021 Number of Days to Update: 84	Source: Department of Toxic Substances Control Telephone: 916-255-3628 Last EDR Contact: 01/13/2022 Next Scheduled EDR Contact: 05/02/2022 Data Release Frequency: Varies	
Financial Assurance 2: Financial Assurance Information Listing A listing of financial assurance information for solid waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.		
Date of Government Version: 08/13/2021 Date Data Arrived at EDR: 08/13/2021 Date Made Active in Reports: 11/05/2021 Number of Days to Update: 84	Source: California Integrated Waste Management Board Telephone: 916-341-6066 Last EDR Contact: 11/16/2021 Next Scheduled EDR Contact: 02/21/2022 Data Belease Frequency: Varies	

Data Release Frequency: Varies

### HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 04/15/2020	Telephone: 916-255-1136
Date Made Active in Reports: 07/02/2020	Last EDR Contact: 01/07/2022
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/18/2022
	Data Release Frequency: Annually

# ICE: ICE

Contains data pertaining to the Permitted Facilities with Inspections / Enforcements sites tracked in Envirostor.

Date of Government Version: 08/13/2021	Source: Department of Toxic Subsances Control
Date Data Arrived at EDR: 08/13/2021	Telephone: 877-786-9427
Date Made Active in Reports: 11/08/2021	Last EDR Contact: 11/15/2021
Number of Days to Update: 87	Next Scheduled EDR Contact: 02/28/2022
	Data Release Frequency: Quarterly

### HIST CORTESE: Hazardous Waste & Substance Site List

The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

Date of Government Version: 04/01/2001 Date Data Arrived at EDR: 01/22/2009 Date Made Active in Reports: 04/08/2009 Number of Days to Update: 76 Source: Department of Toxic Substances Control Telephone: 916-323-3400 Last EDR Contact: 01/22/2009 Next Scheduled EDR Contact: N/A Data Release Frequency: No Update Planned

## HWP: EnviroStor Permitted Facilities Listing

Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

Date of Government Version: 08/13/2021	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/13/2021	Telephone: 916-323-3400
Date Made Active in Reports: 11/08/2021	Last EDR Contact: 11/15/2021
Number of Days to Update: 87	Next Scheduled EDR Contact: 02/28/2022
	Data Release Frequency: Quarterly

## HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 10/04/2021	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 10/05/2021	Telephone: 916-440-7145
Date Made Active in Reports: 12/22/2021	Last EDR Contact: 01/04/2022
Number of Days to Update: 78	Next Scheduled EDR Contact: 04/18/2022
	Data Release Frequency: Quarterly

#### MINES: Mines Site Location Listing

A listing of mine site locations from the Office of Mine Reclamation.

Date of Government Version: 09/07/2021	Source: Department of Conservation
Date Data Arrived at EDR: 09/07/2021	Telephone: 916-322-1080

# WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

Date of Government Version: 02/11/2021 Date Data Arrived at EDR: 07/01/2021 Date Made Active in Reports: 09/29/2021 Number of Days to Update: 90

### WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Date of Government Version: 09/07/2021 Date Data Arrived at EDR: 09/08/2021 Date Made Active in Reports: 12/01/2021 Number of Days to Update: 84 Source: State Water Resources Control Board Telephone: 916-341-5810 Last EDR Contact: 12/07/2021 Next Scheduled EDR Contact: 03/21/2022 Data Release Frequency: Quarterly

## CIWQS: California Integrated Water Quality System

The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

Date of Government Version: 08/30/2021 Date Data Arrived at EDR: 08/31/2021 Date Made Active in Reports: 11/19/2021 Number of Days to Update: 80 Source: State Water Resources Control Board Telephone: 866-794-4977 Last EDR Contact: 11/30/2021 Next Scheduled EDR Contact: 03/14/2022 Data Release Frequency: Varies

# CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

Date of Government Version: 10/18/2021 Date Data Arrived at EDR: 10/19/2021 Date Made Active in Reports: 01/12/2022 Number of Days to Update: 85 Source: California Environmental Protection Agency Telephone: 916-323-2514 Last EDR Contact: 10/19/2021 Next Scheduled EDR Contact: 01/31/2022 Data Release Frequency: Varies

### NON-CASE INFO: Non-Case Information Sites (GEOTRACKER) Non-Case Information sites

Date of Government Version: 09/07/2021 Date Data Arrived at EDR: 09/07/2021 Date Made Active in Reports: 11/29/2021 Number of Days to Update: 83 Source: State Water Resources Control Board Telephone: 866-480-1028 Last EDR Contact: 12/07/2021 Next Scheduled EDR Contact: 03/21/2022 Data Release Frequency: Varies

OTHER OIL GAS: Other Oil & Gas Projects Sites (GEOTRACKER) Other Oil & Gas Projects sites

Date of Government Version: 09/07/2021	Source: State Water Resources Control Board

## EDR HIGH RISK HISTORICAL RECORDS

# EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A Source: EDR, Inc. Telephone: N/A Last EDR Contact: N/A Next Scheduled EDR Contact: N/A Data Release Frequency: No Update Planned

# EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A Source: EDR, Inc. Telephone: N/A Last EDR Contact: N/A Next Scheduled EDR Contact: N/A Data Release Frequency: Varies

# EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A Source: EDR, Inc. Telephone: N/A Last EDR Contact: N/A Next Scheduled EDR Contact: N/A Data Release Frequency: Varies

### EDR RECOVERED GOVERNMENT ARCHIVES

**Exclusive Recovered Govt. Archives** 

### RGA LF: Recovered Government Archive Solid Waste Facilities List

The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

Date of Government Version: N/A Date Data Arrived at EDR: 07/01/2013 Date Made Active in Reports: 01/13/2014 Number of Days to Update: 196 Source: Department of Resources Recycling and Recovery Telephone: N/A Last EDR Contact: 06/01/2012 Next Scheduled EDR Contact: N/A Data Release Frequency: Varies

RGA LUST: Recovered Government Archive Leaking Underground Storage Tank The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

### LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

### **OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

#### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

# **GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM**

### TARGET PROPERTY ADDRESS

WILL ROGERS ELEMENTARY SCHOOL 2401 14TH STREET SANTA MONICA, CA 90405

## TARGET PROPERTY COORDINATES

Latitude (North):	34.012555 - 34^ 0' 45.20''
Longitude (West):	118.47105 - 118 28' 15.78"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	364163.0
UTM Y (Meters):	3764329.0
Elevation:	139 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	12021681 BEVERLY HILLS, CA
Version Date:	2018
South Map:	11997980 VENICE, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

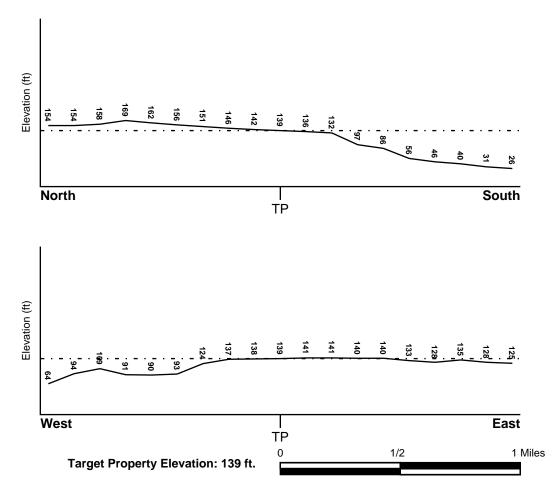

## **TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1590F	FEMA FIRM Flood data
Additional Panels in search area:	FEMA Source Type
06037C1751F 06037C1752F	FEMA FIRM Flood data FEMA FIRM Flood data
NATIONAL WETLAND INVENTORY	NWI Electronic
NWI Quad at Target Property BEVERLY HILLS	<u>Data Coverage</u> YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## Site-Specific Hydrogeological Data\*:

, , , , ,	
Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NNW
Site Name:	Chemold Co Colorado
Site EPA ID Number:	CA0000476739
Groundwater Flow Direction:	Southeast
Measured Depth to Water:	approximately 125 feet in the Ballona aquifer.
Hydraulic Connection:	The near surface deposits to a depth of 90 feet vary from gravel, to fine sand, to clay of the recent alluvium. The recent alluvium is underlain by the Silverado aquifer, which is located within sand and gravel deposits with small amounts of clay.
Sole Source Aquifer: Data Quality:	No information about a sole source aquifer is available Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

## **AQUIFLOW**®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
14	1/2 - 1 Mile South	SSW
C19	1/2 - 1 Mile West	S
H57	1/2 - 1 Mile SSE	SW
116	1/2 - 1 Mile South	SSW
1G	1/2 - 1 Mile West	S
2G	1/2 - 1 Mile South	SSW
3G	1/2 - 1 Mile SSE	SW
4G	1/2 - 1 Mile South	SSW

For additional site information, refer to Physical Setting Source Map Findings.

## **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **ROCK STRATIGRAPHIC UNIT**

### **GEOLOGIC AGE IDENTIFICATION**

Sequence

Era:	Cenozoic	Category:	Stratifed St
System:	Quaternary	5	
Series:	Quaternary		
Code:	Q (decoded above as Era, Sys	stem & Series)	

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

a hydric soil.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status: Soil does not meet the	requirements for
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches

Depth to Bedrock Max: > 10 inches

	Soil Layer Information							
	Bou	ndary		Classif	ication			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)	
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00	

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam clay silt loam loamy sand sandy loam fine sand clay loam gravelly - sandy loam coarse sand gravelly - sand sand
Surficial Soil Types:	loam clay silt loam loamy sand sandy loam fine sand clay loam gravelly - sandy loam coarse sand gravelly - sand sand
Shallow Soil Types:	fine sandy loam gravelly - loam sand silty clay
Deeper Soil Types:	stratified clay loam silty clay loam gravelly - sandy loam coarse sand sand weathered bedrock very fine sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

#### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

#### HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA Telephone: 877-336-2627 Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife Telephone: 916-445-0411

#### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

#### **GEOLOGIC INFORMATION**

#### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

#### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS) Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

#### LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### **OTHER STATE DATABASE INFORMATION**

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database Source: Department of Water Resources Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division Telephone: 916-323-1779 Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

--- Please respond above this line ---

April 8, 2022

Eric Fraske NV5 3777 Long Beach Blvd, Annex Building Long Beach, CA 90807 <eric.fraske@nv5.com>

# Reference: AB3205 – Request to Identify Facilities within a 0.25 Mile Radius of a School Site

Dear Mr. Fraske:

Thank you for your request to the South Coast Air Quality Management District to identify facilities with the potential to emit hazardous or acutely hazardous air pollutants located within one-quarter (1/4) mile radius of Will Rogers Elementary School located at 2401 14<sup>th</sup> Street, Santa Monica, CA 90405.

In response to your request, South Coast AQMD staff performed a database search and conducted a field inspection survey of the area surrounding the school site. In accordance with the provisions of Public Resource Code 21151.8(a)(2), enclosed is a map showing all facilities with South Coast AQMD permits or pending applications that are located within a <sup>1</sup>/<sub>4</sub>- mile radius of the school site. **Based upon our database search and field evaluation, there is one facility with active or pending permits within the <sup>1</sup>/<sub>4</sub>-mile radius of the school site, as follows:** 

Facility	Name	Address	City	Zip	Equipment
ID					
182374	Frontier California	1515 Ocean Park Blvd	Santa	90405	Emergency Backup
	Inc Sunset Co		Monica		Electrical Generator, (>500
					Horsepower), Diesel Fired
44115	Santa Monica	1900 Pico Blvd	Santa	90405	One Emergency Backup
	College		Monica		Electrical Generator, (>500
	-				Horsepower), Diesel Fired
					Two Emergency Backup
					Electrical Generators, (50-
					500 Horsepower)

Please be advised that this information is specific only to those facilities that have either Permits to Operate and/or pending applications with the South Coast AQMD and those that were readily recognizable during our field survey activities. There may be other operating facilities located within the <sup>1</sup>/<sub>4</sub> -mile radius of the school site that emit hazardous or acutely hazardous air pollutants that were not identified through this process.

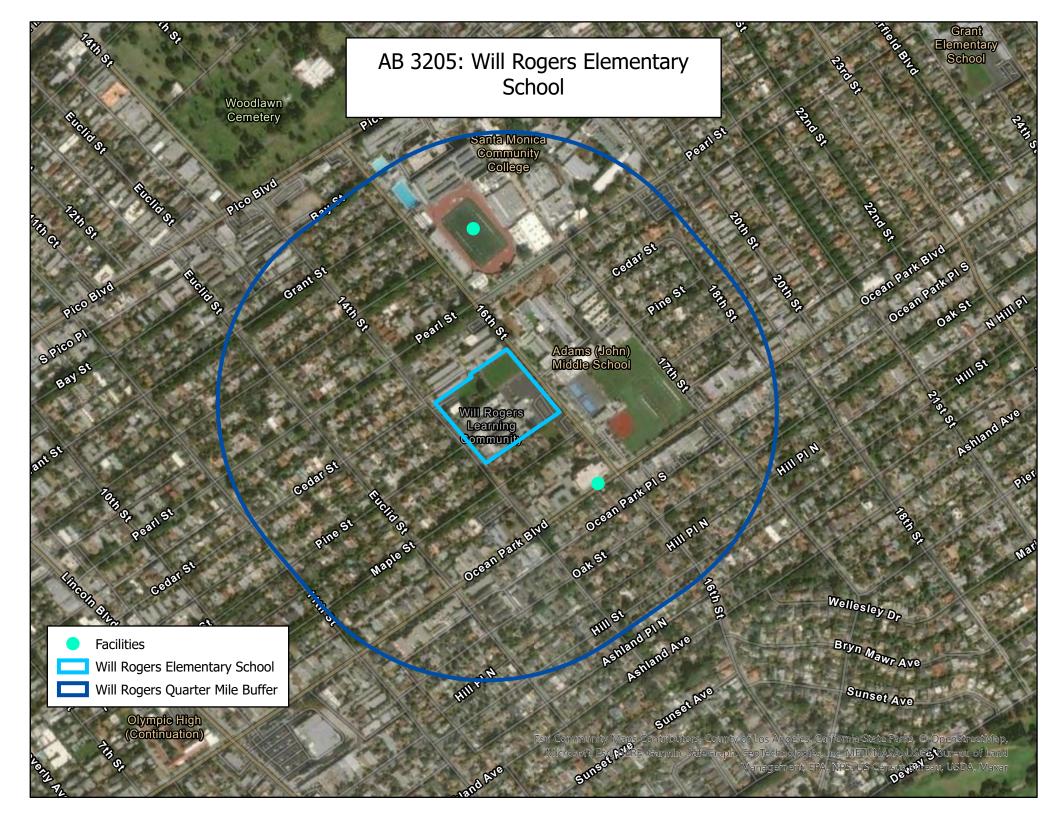

If you have any questions regarding the enclosed information, please contact David Hauck at <u>dhauck@aqmd.gov</u> or 909-396-2512.

Sincerely,

David Hauck Supervising Engineer, Title V/Permit Streamlining Engineering and Permitting Division

EDR Lien and AUL Report

WILL ROGERS ELEMENTARY SCHOOL 2401 14TH STREET SANTA MONICA, CA 90405

Inquiry Number: 6819893.56S JANUARY 19, 2022

# **EDR Environmental Lien and AUL Search**

6 Armstrong Road, 4th floor Shelton, CT 06484 Toll Free: 800.352.0050 www.edrnet.com

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business. Please contact EDR at 1-800-352-0050 with any guestions or comments.

## The EDR 1940 Chain of Title

6 Armstrong Road, 4th floor Shelton, CT 06484 Toll Free: 800.352.0050 www.edrnet.com

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

Historical Chain of Title research

SANTA MONICA UNIFIED SCHOOL DISTRICT, (hereinafter referred to as "Grantor"), hereby grants to SOUTHERN CALIFORNIA EDISON COMPANY, a corporation, its successors and assigns [hereinafter referred to as "Grantee"), an easement and right of way to construct, use, maintain, operate, alter, add to, repair, replace, reconstruct, inspect and remove at any time and from time to time underground electrical supply systems and communication systems (hereinafter referred to as "systems"), consisting of wires, underground conduits, cables, vaults, manholes, handholes, and including above-ground enclosures, markers and concrete pads and other appurtenant fixtures and equipment necessary or useful for distributing electrical energy and for transmitting intelligence by electrical means, in, on, over, under, across and along that certain real property in the County of Los Angeles. State of California, described as follows:

The Northwesterly 5 feet of the Southwesterly 40 feet of Lot 3 in Block 42, of East Santa Monica, in Book 17 Pages 95 to 98 inclusive of Miscellaneous Records. in the office of the Recorder of said County

This legal description was prepared pursuant to Sec. 8730(c) of the Business & Professions Code.

The Grantor agrees for itself, its successors and assigns, not to erect, place or maintain, nor to permit the erection, placement or maintenance of any building, planter boxes, earth fill or other structures except walls and fences on the above described real property. The Grantee, and its contractors, agents and employees, shall have the right to trim or cut tree roots as may endanger or interfere with said systems and shall have free access to said systems and every part thereof, at all times, for the purpose of exercising the rights herein granted; provided, however, that in making any excavation on said property of the Grantor, the Grantee shall make the same in such manner as will cause the least injury to the surface of the ground around such excavation, and shall replace the earth so removed by it and restore the surface of the ground to as near the same condition as it was prior to such excavation as is practicable.

R/W W.O. 10286 SM OFFICIAL RECORDS RAY E. LEE, RECORDER LOS ANGELES COUNTY, CALIF. FEE \$280 2H

COUNTY THE LICENSOR, SANTA MONICA SCHOOL DISTRICT OF LOS ANGELES, hereby grants to the Licensee, SOUTHERN CALIFORNIA EDISON COMPANY, a corporation, its successors and assigns, the right to construct, use, maintain, siter, add to, repair, replace and/or remove, in, on, under and over the real property hereinsfter described, sit-uated in the County of Los Angeles, State of California, an electric line, consist-ing of poles, necessary guys and anchors, cross-arms, wires and other fixtures and appliances, for conveying electric energy to be used for light, heat, power, tele-phone and/or other purposes, and an underground electric system consisting of under-ground conduits, together with the wires therein and necessary appurtenances. The Licensee shall have the right to place and maintain on said pole line and in said underground conduits, as many wires and other necessary appliances as it shall desire to do in the conduct of its business.

Said real property is described as follows:

Lots 3, 4, 5 and 6 in Block 42 of Bast Santa Monica as per map re-corded in Book 17, pages 95 and 98 inclusive, of Miscellaneous Records, records of said County of Los Angeles.

All poles shall be erected and maintained within one foot of the following described line:

Beginning at a point in the northeasterly line of 14th Street, as now established, distant southeasterly thereon 1 foot from the northwest-erly line of said Lot 3; thence northeasterly, and parallel with said northwesterly line to a point in the northeasterly line of said Lot 3.

Said underground conduits shall be installed and maintained in a strip of land 4 feet in width, the center line of which is described as follows:

Beginning at the point of intersection of the northeasterly line of 14th Street, as now established, with the northeasterly prolongation of the southeasterly line of Fine Street, as now established; thence north-easterly, a distance of 165 feet.

and under the following terms and conditions:

ų,

.

1. During the construction or repair of said electrical facilities, proper safeguards such as barricades shall be erected, and on completion of the repair, mainte-nance, or removal of said electrical facilities, the property is to be restored to its original condition.

2. All State and City laws, ordinances, and regulations shall be complied with relative to the construction and maintenance of said electrical facilities.

3. Licensee and its agents and employees shall have free access to said elec-tric line and every part thereof, at all times, for the purpose of exercising the rights herein granted, and shall have the right to trim or top such trees as may en-danger or interfere with said electric line.

4. Licenses shall hold the Licensor free and harmless from any liability arising out of the occupancy and use of the property described herein, and the Licenses shall be responsible for any damage to the property of the Licensor by reason of any negligent act or omission on the part of said Licenses arising out of such work of repairing, constructing, maintaining, replacing, altering and/or removing said elec-trical facilities.

### 300429413 PAGE 62

License--Santa Monica School District of Los Angeles County.

88.

5. Licensee agrees that in the event said electric line shall interfere with the future improvement of the above-described land, then the Licensee will within 90 days after the receipt from the Licensor of a written notice so to do, relocate said electric line in a feasible location on the said property of the Licensor and so as to conform to such future improvement, or remove said electric line from said land.

IN WITNESS WHEREOF, said SANTA MONICA SCHOOL DISTRICT OF LOS ANGELES has caused this instrument to be executed this \_\_\_\_\_\_ day of \_\_\_\_\_\_\_, 1949.

Deputy

EXCERPT FROM THE SANTA MONICA BOARD OF EDUCATION MINUTES OF JANUARY 5, 1949

President and Secretary authorized to execute a revocable easement for the installation of underground service on Will Rogers site.

It was moved by Mrs. Cornett, seconded by Mr. Williams, and unanimously carried by roll call that the President and Secretary of the Board of Education be authorized to execute a revocable easement or license for the installation of underground service on the Will Rogers site.

I hereby certify that this is a true and correct copy of the motion appearing in the minutes of January 3, 1949.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

### **EXECUTIVE SUMMARY**

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each ad dress, the directory lists the name of the corresponding occupant at five year intervals.

Bus iness directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

As ummary of the information obtained is provided in the text of this report.

### **RECORD SOURCES**

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDRis licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

#### Certified Sanborn Results: Certification # 7753-46C6-8787 PO# SMSD-21-10665 5 Will Rogers Elementary School Project Maps Provided: Sanborn® Library search results 1986 Certification #: 7753-46C6-8787 1965 The Sanborn Library includes more than 1.2 million 1950 fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched: Library of Congress University Publications of America EDR Private Collection The Sanborn Library LLC Since 1866™

#### Limited Permission To Make Copies

NV5 (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

#### PHASE I ESA QUESTIONNAIRE

ASTM E-1527-13 provides Landowner Liability Protections to purchasers of commercial property if All Appropriate Inquiry (AAI) is completed during property acquisition. The answers to the questions below provide information to the Environmental Professional to assist the User of the referenced Phase I ESA to comply with the User Responsibilities of AAI.

Property Description			
Property Address:	2401 14th St, Santa Monica, CA 90405		
Current Occupant:	Santa Monica/Malibu Unifed School Distrt		
Current Owner:	SMMUSD	Phone:	310-450-8338
Site Contact:	Julian Capata	Phone:	310-713-5897
Potable Water Provider:	City of Santa Monica		
Electricity Provider:	Southern California Edison		
Natural Gas Provider:	Southern California Gas Company		
Sanitary Sewer Provider:	Santa Monica Public Works		
Solid Waste Disposal Provider:	City of Santa Monica Trash Collection		
Hazardous Waste Disposal:	City of Santa Monica Trash Collection		
Reason for Performing ESA	Preparation campus redevelopment project		

Are you aware of any environmental liens that have been filed or recorded under Federal State, local or tribal law? If yes provide details.

Yes X No

Are you aware of any activity or land use limitations (AULs), engineering controls or land use limitations that have been filed or recorded under Federal, State, Local or Tribal Law? If yes, provide details.

□ Yes 🕱 No

Do you have any specialized knowledge of the property or experience related to the subject property or nearby properties so that you would have knowledge of chemicals or processes used at the property? If yes, provide details.

Is the acquisition price differing from the fair market value of the property?
□ Yes ▲ No
If there is a difference, have you considered a lower price is due to contamination known or believed to be present at the property? Please provide details.
□ Yes ▲ No

As the user of this ESA, based on your knowledge and experience with the property, are there any obvious indications of the presence or likely presence of contamination at the property? If yes, provide details.

Are you aware of any information that would help the environmental professional identify conditions indicative of releases or potential releases, including past uses of the property, uses of chemicals at the property, or environmental cleanups that have taken place at the property? If yes, provide details.

□ Yes 🛯 No

Do you know of any pending, past or threatened litigation or administrative proceedings related to hazardous substances or petroleum products on, in or from the property or any notices regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products? If yes, provide details.

□ Yes 🖄 No

Are there any chemical storage areas or hazardous material storage areas located at the subject property? If yes, provide details.

Are there any current or historical Aboveground Storage Tanks or Underground Storage Tanks? If yes, provide details. □ Yes 🕱 No Are there any current or historical wastewater treatment systems, clarifier/interceptor systems, or grease trap systems associated with the subject property? If yes, provide details. □ Yes x No

Are you aware of the existence or location of the following documents related to the subject property, and if yes, can copies be made available for review by the Environmental Professional?

- Previous Environmental Site Assessment reports or Investigation reports
- □ Environmental Permits
- □ Registrations for underground storage tanks (USTs)
- □ Spill Prevention Containment and Contingency Plans (SPCC)
- □ Stormwater Pollution Prevention Plans (SWPPP)
- □ Risk Assessments
- □ Hydrogeologic Reports related to the property or surrounding area
- □ Notices of Violation from governmental agencies regarding past or current violations of environmental laws or related to environmental liens encumbering the property
- □ Hazardous waste manifests or generation reports
- □ Recorded land and activity use limitations
- X□ Geotechnical Studies

## **GEOTECHNICAL INVESTIGATION REPORT**

NEW EARLY EDUCATION/KINDERGARTEN CLASSROOM BUILDING WILL ROGERS ELEMENTARY SCHOOL 2401 14TH STREET SANTA MONICA, LOS ANGELES COUNTY, CALIFORNIA

CONVERSE PROJECT NO. 21-31-226-01

#### Prepared For: SANTA MONICA-MALIBU UNIFIED SCHOOL DISTRICT

Mr. Michael Burke Architect/Design Manager Facility Improvement Projects 2828 4th Street Santa Monica, California 90405

> Presented By: CONVERSE CONSULTANTS 717 South Myrtle Avenue Monrovia, California 91016 626-930-1200

> > October 20, 2021

**Converse Consultants** 

75 Years of Dedication in Geotechnical Engineering & Consulting, Environmental & Groundwater Science, Materials Testing & Inspection Services

October 20, 2021

Mr. Michael Burke Architect/Design Manager Facility Improvement Projects Santa Monica-Malibu Unified School District 2828 4th Street Santa Monica, California 90405

Subject: GEOTECHNICAL INVESTIGATION REPORT New Early Education/Kindergarten Classroom Building Will Rogers Elementary School 2401 14<sup>th</sup> Street, Santa Monica, Los Angeles County, California 90405 Santa Monica-Malibu Unified School District Converse Project No. 21-31-226-01

Mr. Michael Burke:

Enclosed is the Geotechnical Investigation Report prepared by Converse Consultants (Converse) for the New Early Education/Kindergarten Classroom Building Project within Will Rogers Elementary School in Santa Monica, California.

The purpose of the study was to investigate the geotechnical site conditions and provide recommendations for the new 1-story classroom building and playground area within Will Rogers Elementary School.

Based on our field exploration, laboratory testing, geologic evaluation, and geotechnical analysis, the site is suitable from a geotechnical standpoint for this project, provided our conclusions and recommendations are implemented during design and construction.

We appreciate the opportunity to be of continued service to Santa Monica Malibu Unified School District. If you should have any questions, please do not hesitate to contact us at (626) 930-1200.

Sincerely,

#### **CONVERSE CONSULTANTS**

VA

Siva K. Sivathasan, PhD, PE, GE, DGE, QSD, F. ASCE Senior Vice President/Principal Engineer

### **PROFESSIONAL CERTIFICATION**

This report for the New Early Education/Kindergarten Classroom Building Project located within Will Rogers Elementary School in Santa Monica, California, has been prepared by the staff of Converse under the professional supervision of the individuals whose seals and signatures appear hereon.

The findings, recommendations, specifications, or professional opinions contained in this report were prepared in accordance with generally accepted professional engineering and engineering geologic principles and practice in this area of Southern California. There is no warranty, either expressed or implied.

In the event that changes to the property occur, or additional, relevant information about the property is brought to our attention, the conclusions contained in this report may not be valid unless these changes and additional relevant information are reviewed, and the recommendations of this report are modified or verified in writing.

Babak Abbasi, PhD, EIT Senior Staff Engineer

Mark B. Schluter, PG, CEG, CHG Senior Engineering Geologist

Siva K. Sivathasan, PhD, PE, GE, DGE, QSD, F. ASCE Senior Vice President/Principal Engineer

#### EXECUTIVE SUMMARY

The following is a summary of our geotechnical investigation, conclusions and recommendations as presented in the body of this report. Please refer to the appropriate sections of the report for complete conclusions and recommendations. In the event of a conflict between this summary and the report, or an omission in the summary, the report shall prevail.

- The proposed project is located at 2401 14<sup>th</sup> Street in Santa Monica, Los Angeles County, California. The subject site is relatively flat with surface elevations of approximately 137 feet relative to mean-sea-level (MSL). The site is bounded by 16<sup>th</sup> Street to the east, 14<sup>th</sup> Street to the west, and Maple Street to the south. The site coordinates are: North latitude: 34.01306 degrees, West longitude: 118.4709 degrees.
- A total of three (3) exploratory borings (BH-1 through BH-3) were drilled within the project sites on September 16, 2021. Borings were advanced using a truck mounted drill rig with an 8-inch diameter hollow stem auger to depths ranging from 6.5 to 51.5 feet below the existing ground surface (bgs). Each boring was visually logged by a Converse engineer and sampled at regular intervals and at changes in subsurface soils.
- The earth materials encountered during our investigation consist of existing fill soils placed during previous site grading operations and natural alluvial soils to a maximum depth of 51.5 feet bgs. The fill soils encountered consists primarily of silty sands. The alluvial soil deposits below the fill consist of poorly graded sand with silt. Sampling blow-counts correlate to dense to very dense conditions near surface, and generally become denser with depth.
- Groundwater was not encountered during our subsurface exploration to the deepest depth drilled of 51.5 feet. Based on review of Historically Highest Groundwater Map, Plate No. 1.2, in the Seismic Hazard Zone report for the Beverly Hills 7.5-Minute Quadrangle, Los Angeles County, California, published by the California Department of Conservation, Division of Mines and Geology (CDMG) in 1998, the historic high groundwater level of about 40 feet below the ground surface was noted from wells and soil borings information in the vicinity of the site.
- The project site is not located within a currently designated State of California Earthquake Fault Zone for surface fault rupture. No surface faults are known to project through or towards the site.
- The site is not located within a mapped potential liquefaction zone per the State of California Seismic Hazard Zones Map for the Beverly Hills Quadrangle (2018) as shown in Figure No. 7, Seismic Hazard Zones Map. The analyses were performed

using *Ishihara and Yoshimine (1992)* method for saturated soil and using *Pradel (1998)* method for dry/unsaturated Soil for the upper 50 feet below ground surface. The results of the liquefaction analysis and a summary of the methods used are presented in Appendix E, *Liquefaction/Seismic Settlement Analysis*.

- Based on our analysis, the proposed project site has the potential for dry seismic settlement of up to 0.25 inches. Liquefaction induced settlement is negligible. Therefore, the proposed site has potential for up to 0.25 inches of seismically induced settlement. The differential settlement resulting from dynamic loads is anticipated to be 0.13 inches or less over a horizontal distance of 30 feet.
- The surficial site soils at the site exhibit a "very low" expansive potential. Mitigation for expansive soil is not considered necessary for slabs, foundations and pavements.
- In general, the pH value, chloride content, and concentrations of water soluble sulfates saturated resistivity of the site soils are in the non-corrosive range. The saturated resistivity of the site soils is in the moderately corrosive range to ferrous metals.
- The earth materials at the site should be excavatable with conventional heavy-duty earth moving equipment. Earthwork should be performed with suitable equipment for gravelly materials.
- Shallow spread and continuous footings are considered suitable for structure support provided the recommendations in this report are incorporated into the project plans and specifications and are followed during site construction.
- For non-building structures (e.g. signs, fence walls, short retaining walls, etc.), conventional footings can be used.
- Musco lightings and other non-buildings structures can be supported on Cast-In-Drilled-Hole (CIDH) pile foundations.

Results of our investigation indicate that the site is suitable from a geotechnical standpoint for the proposed development, provided that the recommendations contained in this report are incorporated into the design and construction of the project.

#### 1.0 INTRODUCTION

This report contains the findings and recommendations of our geotechnical study performed at the site of the New Early Education/Kindergarten Classroom Building Project located at Santa Monica, Los Angeles County, California, as shown on Figure No. 1, *Site Location Map*.

The purpose of the study will be to evaluate the subsurface soil conditions and provide geotechnical recommendations and design recommendations for the design and construction of the proposed project, consistent with the 2019 edition of California Building Code (CBC), Title 24, Chapter 16; Earthquake Design, Chapter 18A, Foundation and Retaining Wall; Appendix Chapter 33, Excavation and Grading; Part 1' section 4-317 (e) and CGS Note 48-Checklist for the review of Geologic/Seismic Reports for California Public Schools, Hospitals and Essential Services Buildings for new and existing (retrofit/modernization) buildings.

This report is written for the project described herein and is intended for use solely by the Santa Monica Malibu Unified School District, Will Rogers Elementary School, and its design team. It should not be used as a bidding document but may be made available to potential contractors for information on factual data only. For bidding purposes, the contractors should be responsible for making their own interpretation of the data contained in this report.

#### 2.0 SITE AND PROJECT DESCRIPTION

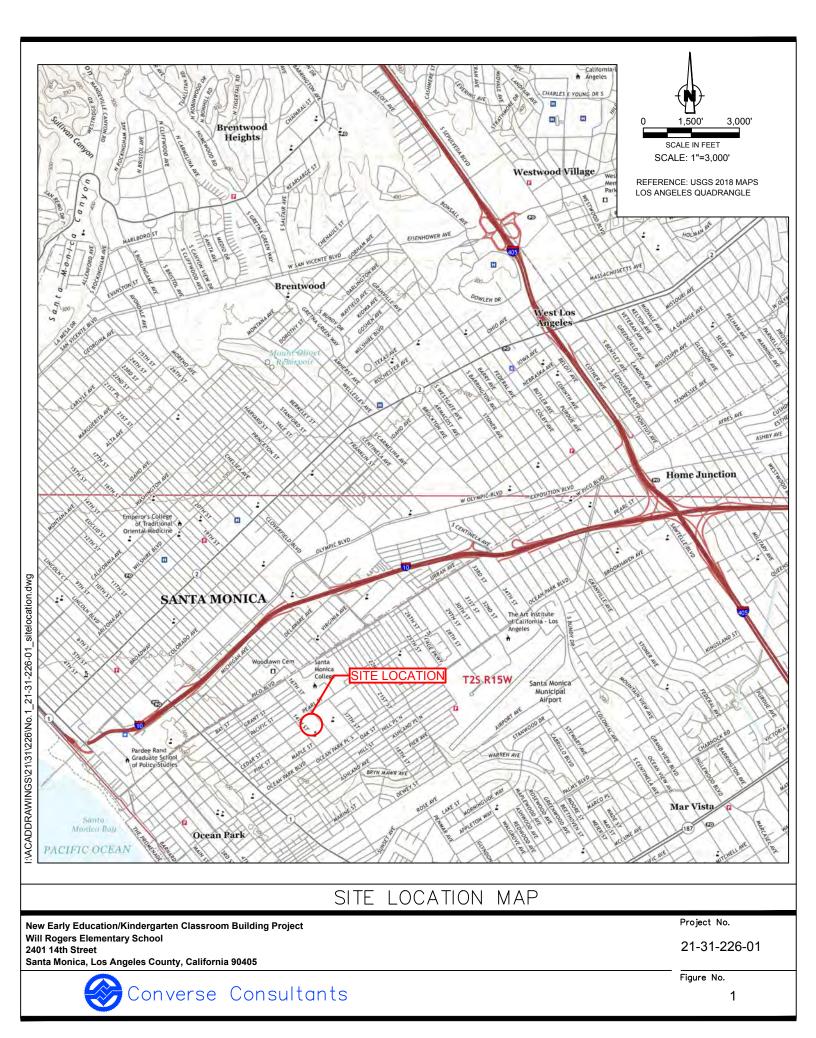

The proposed project is located at 2401 14<sup>th</sup> Street in Santa Monica, Los Angeles County, California. The subject site is relatively flat with surface elevations of approximately 137 feet relative to mean-sea-level (MSL). The site is located on an existing grass play field. The site is bounded by 16<sup>th</sup> Street to the east, 14<sup>th</sup> Street to the west, and Maple Street to the south. The site coordinates are: North latitude: 34.01306 degrees, West longitude: 118.4709 degrees.

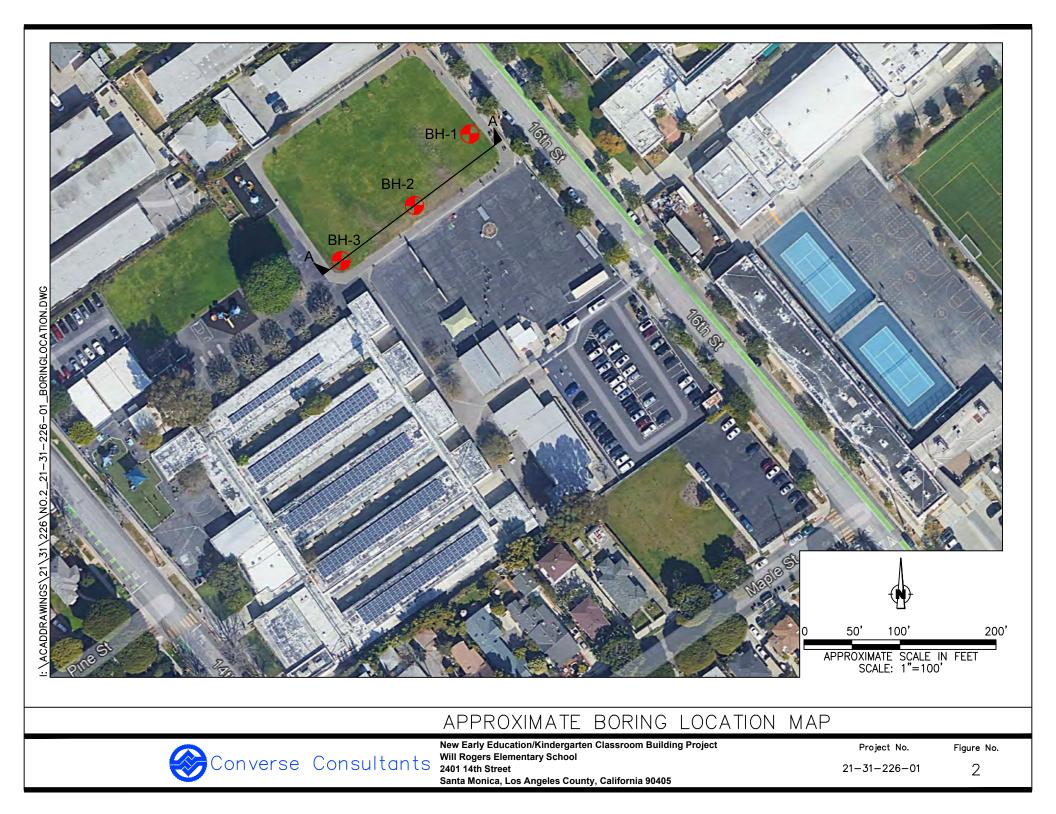

We understand that the proposed project entails construction of new 1-story classroom building totaling 9,600 sf on the ground floor/foundation level and playground area totaling 11,600 sf, and other related improvements within Will Rogers Elementary School as shown on Figure No. 2, *Approximate Boring Locations Map.* The structural loads are anticipated to be low to moderate.

#### 3.0 SCOPE OF WORK

The scope of our work included a site reconnaissance, subsurface exploration with soil sampling, laboratory testing, engineering analyses, and preparation of this report.

#### 3.1 Site Reconnaissance

During the site reconnaissance on September 13, 2021, the surface conditions were noted, and the locations of the borings were determined so that drill rig access to all the locations was available. The borings were located using existing boundary features as a guide and should be considered accurate only to the degree implied by the method used. Underground Service Alert (USA) of Southern California was notified of our proposed drilling locations at least 48 hours prior to initiation of the subsurface field work.

#### 3.2 Subsurface Exploration

Total three (3) exploratory borings (BH-1 through BH-3) were drilled within the project sites on September 16, 2021. Borings were advanced using a truck mounted drill rig with an 8-inch diameter hollow stem auger to depths ranging from 6.5 to 51.5 feet below the existing ground surface (bgs). Each boring was visually logged by a Converse engineer and sampled at regular intervals and at changes in subsurface soils. Detailed descriptions of the field exploration and sampling program are presented in Appendix A, *Field Exploration*.

California Modified Sampler ring samples, Standard Penetration Test samples, and bulk soil samples were obtained for laboratory testing. Standard Penetration Tests (SPTs) were performed in selected borings at selected intervals using a standard split-barrel sampler (1.4 inches inside diameter and 2.0 inches outside diameter). Borings terminated at a depth less than 10 feet below existing ground surface were backfilled with soil cuttings, tamped and capped to match surface conditions. Borings extending into groundwater or deeper than 10 feet were backfilled with cement grout, soil cuttings and capped to match surface conditions.

The approximate locations of the exploratory borings are shown in Figure No. 2, *Approximate Boring Locations Map*. Detailed descriptions of the field exploration and sampling program are presented in Appendix A, *Field Exploration*.

#### 3.3 Laboratory Testing

Representative samples of the site soils were tested in the laboratory to aid in classification and to evaluate relevant engineering properties. The tests performed included:

- In Situ Moisture Contents and Dry Densities (ASTM Standard D2216)
- Grain-Size Analysis (ASTM D422)
- Passing Sieve No. 200 (ASTM D1140)
- Direct Shear (ASTM Standard D3080)
- Maximum dry density and optimum-moisture content relationship (ASTM Standard D1557)

- Expansion Index (ASTM Standard D4829)
- Consolidation (ASTM Standard D2435)
- Soil Corrosivity Tests (Caltrans 643, 422, 417, and 532)
- R-value (California Test 301)

For a description of the laboratory test methods and test results, see Appendix B, *Laboratory Testing Program*. For *in-situ* moisture and density data, see the Logs of Borings in Appendix A, *Field Exploration*.

#### 3.4 Engineering Analyses and Report

Data obtained from the exploratory fieldwork and laboratory-testing program were analyzed and evaluated. This report was prepared to provide the findings, conclusions and recommendations developed during our investigation and evaluation.

#### 4.0 **GEOLOGIC CONDITIONS**

#### 4.1 Regional Geology

The site is located in the northwest portion of the Los Angeles Basin along the northern boundary of the Peninsular Ranges geomorphic province and the southern margin of the Transverse Ranges geomorphic province. The Los Angeles basin is situated at the junction of two major convergent fault systems. The first group includes the northwesttrending high angle strike slip faults of the San Andreas system projecting northward from the northern terminus of the Peninsular Ranges province. Faults in this group include the Palos Verdes, Newport-Inglewood, Whittier-Elsinore, San Jacinto and San Andreas fault zones. The second group includes the east-west trending low angle reverse or reverseoblique faults bounding the southern margin of the Transverse Range province. Faults in this group include the Malibu-Santa Monica, Hollywood, Raymond and Sierra Madre fault zones. The Los Angeles basin is bounded by active faults on all sides and is underlain by buried thrust fault zones. The seismic hazard for the Los Angeles basin and vicinity is high.

The Los Angeles basin is a subsiding structural depression that has accumulated as much as 10,000 feet of sediments since Middle Miocene time, about 10 million years ago. Older sediments have been indurated by deep burial and deformed by folding and faulting. The geologic map of the site vicinity is shown on Figure No. 3, *Regional Geologic Map*. At the site location, it is estimated that pre-Quaternary sedimentary formations lie at least 350 to 400 feet below ground surface. Overlying those formations are younger relatively less deformed, subhorizontally stratified, Quaternary aged sediments varying from marine sands, wind-blown dune deposits to alluvial sands, gravely sands, silts and clays. The shallowest sediments in the site vicinity are Quaternary (< 11,000 years old) fan deposits (CDMG, 1998) that were laid down by streams flowing south from the Santa Monica Mountains.

3

#### 4.2 Subsurface Profile of Subject Site

The earth materials encountered during our investigation consist of existing fill soils placed during previous site grading operations and natural alluvial soils to a maximum depth of 51.5 feet bgs. The fill soils encountered consists primarily of silty sands. The fill soils encountered in the soil borings were approximately 3 to 5 feet thick and were from previous site grading. The alluvial soil deposits below the fill consist of poorly graded sand with silt. Sampling blow-counts correlate to dense to very dense conditions near surface, and generally become denser with depth. Figure No. 4, *Geologic Cross Sections*, have been drawn across the subject site to illustrate the subsurface conditions. For additional information on the subsurface conditions, see the Logs of Boring Data in Appendix A, *Field Exploration*.

#### 4.3 Groundwater

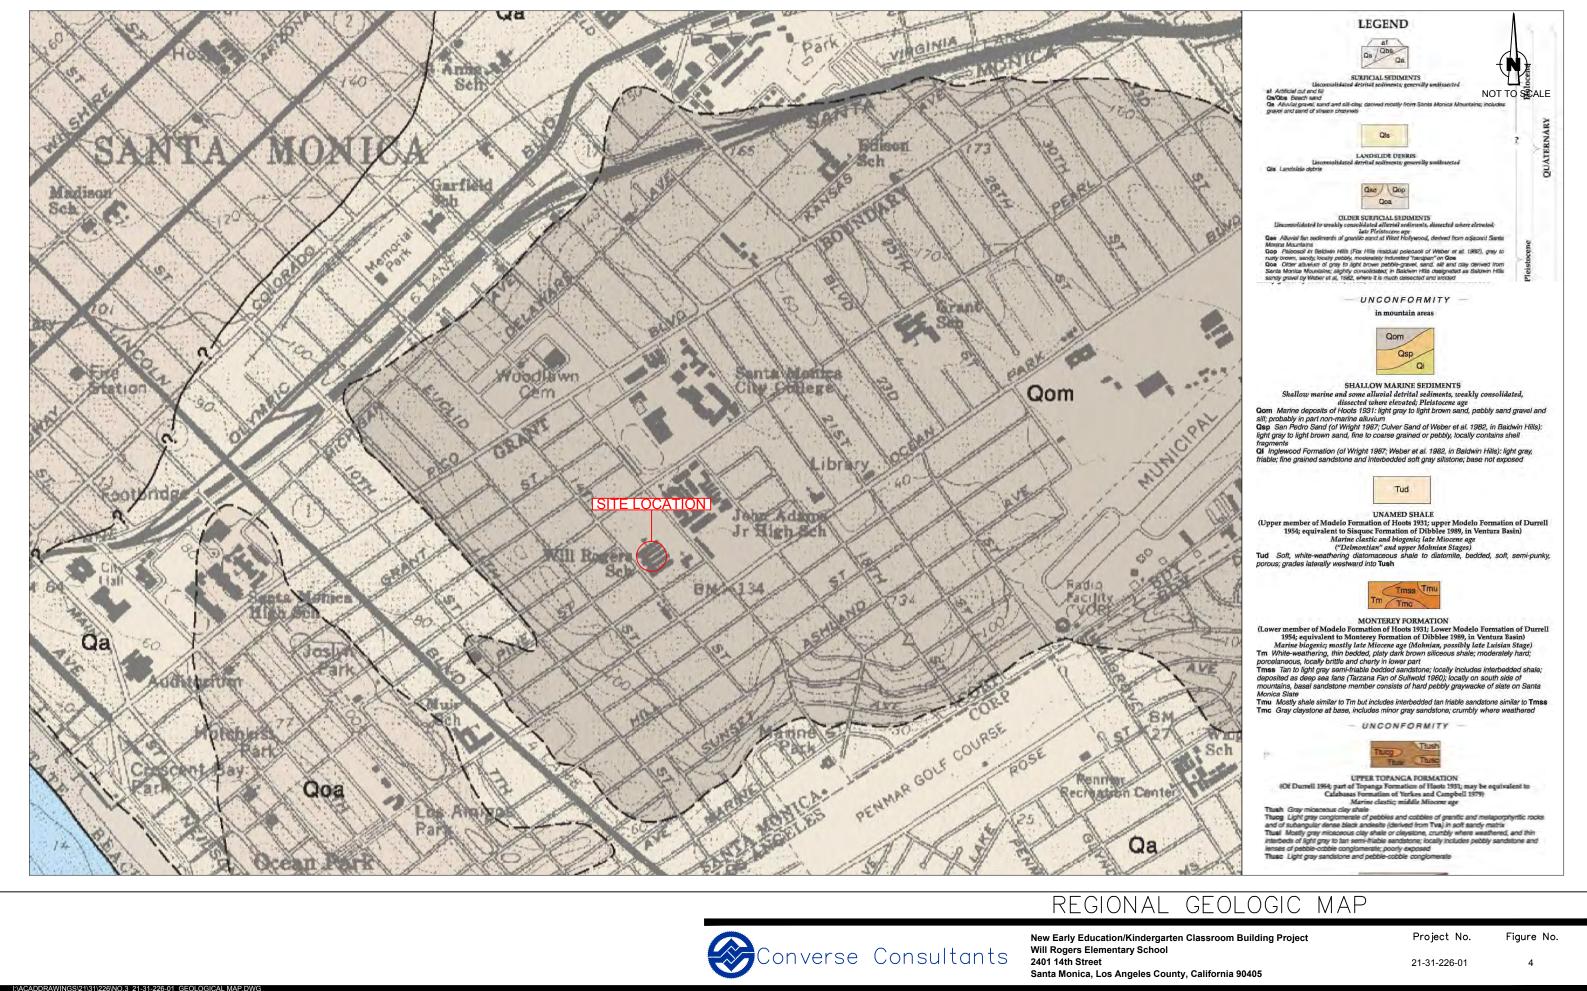

Groundwater was not encountered during our subsurface exploration to the deepest depth drilled of 51.5 feet bgs. Based on review of Historically Highest Groundwater Map, Plate No. 1.2, in the Seismic Hazard Zone report for the Beverly Hills 7.5-Minute Quadrangle, Los Angeles County, California, published by the California Department of Conservation, Division of Mines and Geology (CDMG) in 1998, the historic high groundwater level contour of about 40 feet below the ground surface was noted from wells and soil borings information in the vicinity of the site.

The groundwater level beneath the site can vary depending upon the seasonal precipitation and groundwater basin activities including recharge, storage and pumping occurring in the general site vicinity. In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present within the near-surface deposits due to local conditions, storm water recharge or during rainy seasons. Groundwater conditions below any given site vary depending on numerous factors including seasonal rainfall, local irrigation, local recharge, and groundwater pumping, among other factors.

#### 4.4 Subsurface Variations

Based on results of the subsurface exploration and our experience, some variations in the continuity and nature of subsurface conditions within the project site should be anticipated. Because of the uncertainties involved in the nature and depositional characteristics of the earth material at the site, care should be exercised in interpolating or extrapolating subsurface conditions between or beyond the boring locations. If, during construction, subsurface conditions differ significantly from those presented in this report, this office should be notified immediately so that recommendations can be modified, if necessary.

A detailed description of the earth materials encountered during our field exploration is presented in Appendix A, *Field Exploration*. Figure No. 4, *Geologic Cross Section A-A'*, is provided to illustrate current site conditions by using exploratory borings from the current study drilled on September 16, 2021.

#### 5.0 FAULTING AND SEISMIC HAZARDS

Geologic hazards are defined as geologically related conditions that may present a potential danger to life and property. Typical geologic hazards in Southern California include earthquake ground shaking, fault surface rupture, liquefaction and seismically induced settlement, lateral spreading, landslides, earthquake induced flooding, tsunamis and seiches, and volcanic eruption hazard.

Results of a site-specific evaluation for each type of possible seismic hazards are discussed in the following sections.

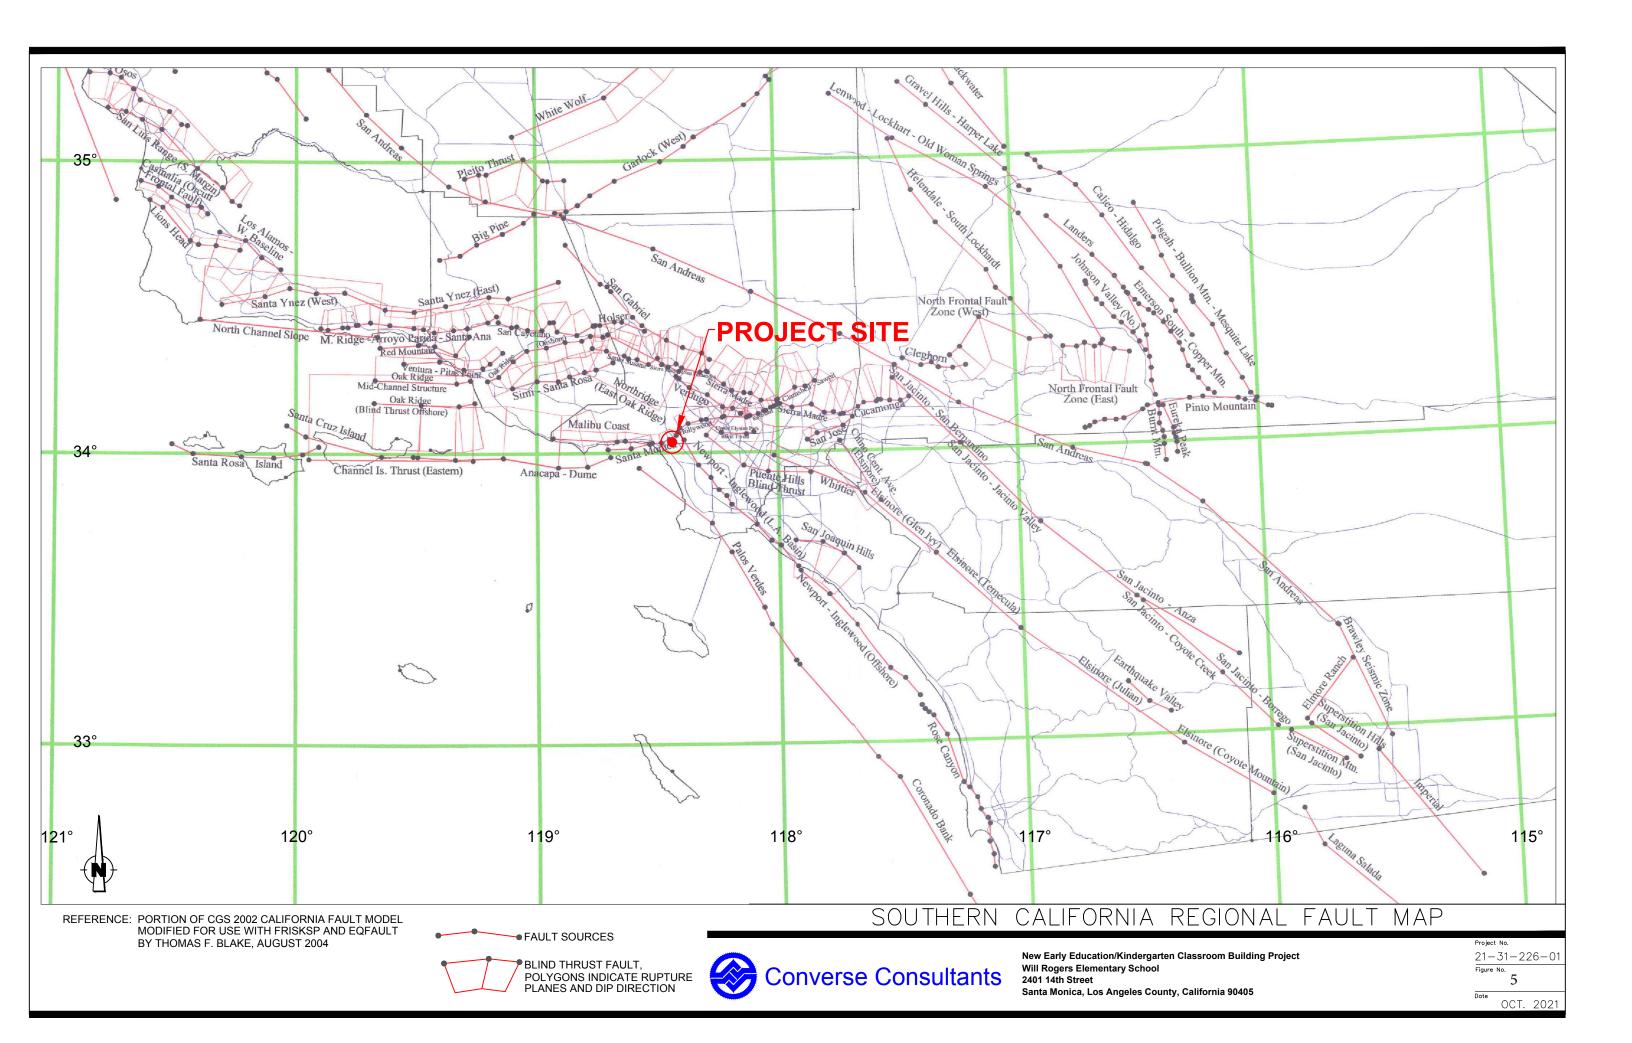

#### 5.1 Seismic Characteristics of Nearby Faults

The proposed project site is situated in a seismically active region. As is the case for most areas of Southern California, ground-shaking resulting from earthquakes associated with nearby and more distant faults may occur at the project site. During the life of the project, seismic activity associated with active faults can be expected to generate moderate to strong ground shaking at the site. Review of recent seismological and geophysical publications indicates that the seismic hazard for the project site is high.

The project site is not located within a currently designated State of California Earthquake Fault Zone for surface fault rupture. No surface faults are known to project through or towards the site. The closest known faults to the project site with mapped surface traces are the Santa Monica Fault (Approximately 1.4 miles to the northwest and north) and Malibu Coast Fault. The Santa Monica and Malibu Coast faults, Anacapa-Dume Fault, and Newport Inglewood Fault along with other regional faults were included as capable faults modeled for the probabilistic seismic hazard analysis for the site. The approximate locations of these local active faults with respect to the project site are shown on Figure No. 5, *Southern California Regional Fault Map*.

There are a number of regional fault systems, which could produce ground shaking at the site during a major earthquake. Table No. 1, *Summary of Regional Faults*, shows the location of the known most capable faults with respect to the site within 50 kilometers. The data presented below was calculated using the National Seismic Hazard Maps Database (USGS, 2008) and other published geologic data.

#### Table No. 1, Summary of Regional Faults

\* (Source: https://earthquake.usgs.gov/cfusion/hazfaults\_2008\_search/)

#### 5.2 Surface Fault Rupture

The project site is not located within a currently designated State of California Earthquake Fault Zone (formerly Alquist-Priolo Special Studies Zones) for surface fault rupture. The Alquist-Priolo Earthquake Fault Zoning Act requires the California Geological Survey to zone "active faults" within the State of California. An "active fault" has exhibited surface displacement with Holocene time (within the last 11,000 years) hence constituting a

potential hazard to structures that may be located across it. Structures are required to be set-back at least 50 feet from an active fault. The active fault set-back distance is measured perpendicular from the dip of the fault plane. Based on a review of existing geologic information, no known active faults project through or toward the site. The approximate location of the project site with respect to the active Santa Monica Fault and Malibu Coast Fault is shown on Figure No. 5, *Southern California Regional Fault Map*. The potential for surface rupture resulting from the movement of the nearby major faults is considered very low.

Review of recent seismological and geophysical publications indicates that the seismic hazard for the Los Angeles basin is high. The Los Angeles basin is bounded by active regional faults on all sides and underlain by alluvial sediments and buried thrust faults. The seismic hazard for the Los Angeles basin was illustrated by the 1971 San Fernando, 1987 Whittier Narrows, 1991 Sierra Madre, and 1994 Northridge earthquakes. The epicenters for these earthquakes are shown on Figure No. 6, *Epicenter Map of Southern California Earthquakes (1800-1999)*.

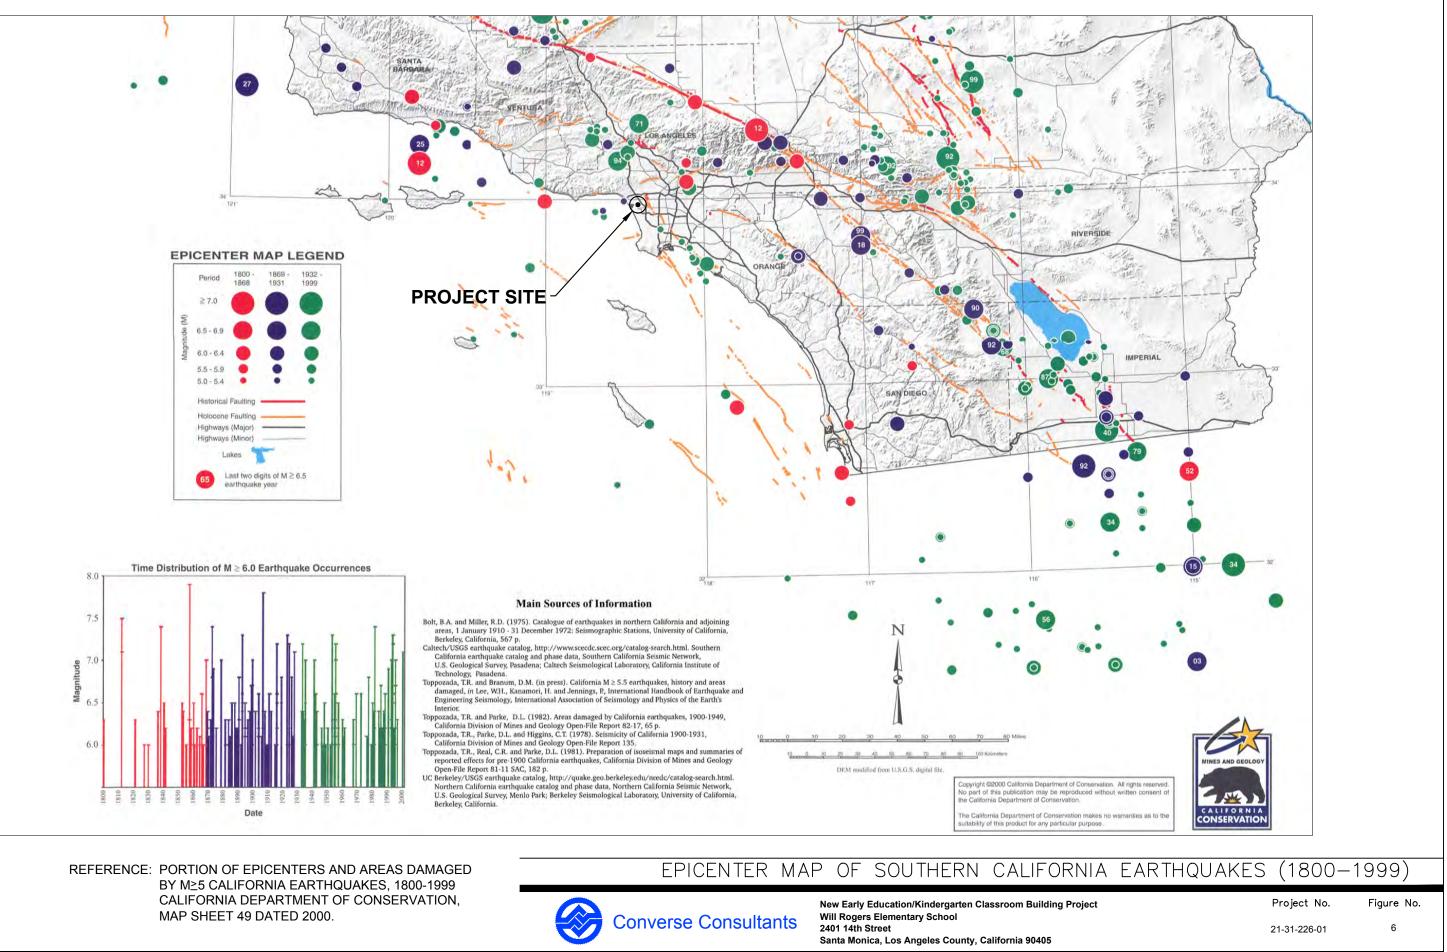

#### 5.3 Liquefaction and Seismically-Induced Settlement

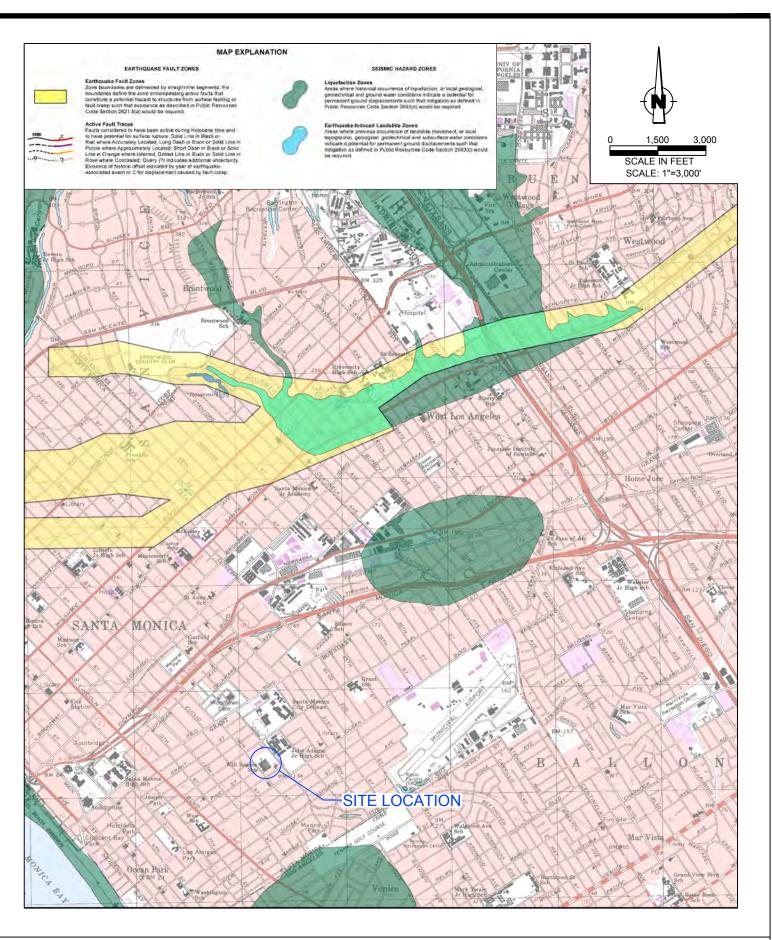

Liquefaction is the sudden decrease in the strength of cohesionless soils due to dynamic or cyclic shaking. Saturated soils behave temporarily as a viscous fluid (liquefaction) and, consequently, lose their capacity to support the structures founded on them. The potential for liquefaction decreases with increasing clay and gravel content, but increases as the ground acceleration and duration of shaking increase. Liquefaction potential has been found to be the greatest where the groundwater level and loose sands occur within 50 feet of the ground surface.

The site is not located within a mapped potential liquefaction zone per the State of California Seismic Hazard Zones Map for the Beverly Hills Quadrangle as shown in Figure No. 7, *Seismic Hazard Zones Map*. The analyses were performed using *Ishihara and Yoshimine (1992)* method for saturated soil and using *Pradel (1998)* method for dry/unsaturated Soil for the upper 50 feet below ground surface. The results of the liquefaction analysis and a summary of the methods used are presented in Appendix E, *Liquefaction/Seismic Settlement Analysis*.

Based on our analysis, the proposed project site has the potential for dry seismic settlement of up to 0.25 inches. Liquefaction induced settlement is negligible. Therefore, the proposed site has potential for up to 0.25 inches of seismically induced settlement. The differential settlement resulting from dynamic loads is anticipated to be 0.13 inches or less over a horizontal distance of 30 feet.

 Project No.
 Figures No.

 21-31-226-01
 7

#### 5.4 Lateral Spreading

Seismically induced lateral spreading involves primarily lateral movement of earth materials due to ground shaking. It differs from the slope failure in that complete ground failure involving large movement does not occur due to the relatively smaller gradient of the initial ground surface. Lateral spreading is demonstrated by near-vertical cracks with predominantly horizontal movement of the soil mass involved. The topography at the project site and in the immediate vicinity of the site is relatively flat, with no significant nearby slopes or embankments. Under these circumstances, the potential for lateral spreading at the subject site is considered negligible.

#### 5.5 Seismically-Induced Slope Instability

Seismically induced landslides and other slope failures are common occurrences during or soon after earthquakes. The project site is relatively flat. In the absence of significant ground slopes, the potential for seismically induced landslides to affect the proposed site is considered to be nil.

#### 5.6 Earthquake-Induced Flooding

Review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Map Number 06037C1588G, effective date April 21, 2021, from the Map Service Center (MSC) viewer, indicates that the site is designated as Zone "X", "Area of minimal flood hazard". The potential of earthquake induced flooding of the subject site is considered to be very low.

#### 5.7 Tsunami and Seiches

Tsunamis are seismic sea waves generated by fault displacement or major ground movement. Based on the location of the site from the ocean (approximately 1.25 miles west of the site) and site surface elevation, tsunamis do not pose a hazard. Seiches are large waves generated in enclosed bodies of water in response to ground shaking. Based on site location away from lakes and reservoirs, seiches do not pose a hazard.

#### 5.8 Volcanic Eruption Hazard

There are no known volcanoes near the site. According to Jennings (1994), the nearest potential hazard from future volcanic eruptions is the Amboy Crater-Lavic Lake area located in the Mojave Desert more than 120 miles northeast of the site. Volcanic eruption hazards are not present.

#### 6.0 SEISMIC ANALYSIS

#### 6.1 CBC Seismic Design Parameters

General seismic parameters based on the 2019 California Building Code and ASCE 7-16 with Supplement 1 are calculated using the ATC hazard, *Seismic Design by Location* website application and the site coordinates (North latitude: 34.01306 degrees, West longitude: 118.4709 degrees). The seismic parameters are presented below.

Table No.	2,	<b>CBC Seis</b>	smic Des	ign Parameters
-----------	----	-----------------	----------	----------------

Seismic Parameter	Value
Site Class	D
Mapped Short period (0.2-sec) Spectral Response Acceleration, Ss	1.916 g
Mapped 1-second Spectral Response Acceleration, S1	0.683 g
Site Coefficient, Fa	1.0
Site Coefficient, Fv*	1.7
MCE 0.2-sec period Spectral Response Acceleration, S <sub>MS</sub>	1.916 g
MCE 1-second period Spectral Response Acceleration, S <sub>M1</sub> *	1.161 g
Design Spectral Response Acceleration for short period, S <sub>DS</sub>	1.277 g
Design Spectral Response Acceleration for 1-second period, S <sub>D1</sub> *	0.774 g
Site-Modified Peak Ground Acceleration, MCEG PGA	0.900 g

\*See requirements of ASCE 7-16 Section 11.4.8

#### 6.2 Site-Specific Seismic Parameters

Site-specific acceleration parameters were evaluated in accordance with the seismic provisions in Section 21 of ASCE 7-16 guidelines (ASCE, 2016), which were adopted in the 2019 California Building Code. These parameters were determined for the site coordinates and weighted average shear wave velocity from the boring data using the online calculator developed by the Utilization of Ground Motion Simulation (UGMS) committee of the Southern California Earthquake Center (SCEC). The recommended site-specific risk-targeted Maximum Considered Earthquake (MCE<sub>R</sub>) and design response spectra are presented in Appendix D, *Seismic Hazard Analysis Results*. The following table summarizes the recommended 2019 CBC site-specific seismic design parameters calculated using the UGMS online tool.

Seismic Parameter	Value
$^{(1)}\text{MCE}_{\text{R}}$ (5%, damped) Spectral response acceleration for short periods adjusted for site class, S <sub>MS</sub>	2.384 g
$^{(1)}MCE_R$ (5% damped) spectral response acceleration at 1-second period adjusted for site class, $S_{M1}$	1.652 g
Design spectral response acceleration (5% damped) at short periods, $S_{DS}$	1.589 g
Design Spectral response acceleration (5% damped) at 1-second period, S <sub>D1</sub>	1.101 g
Site-Modified Peak Ground Acceleration, MCE <sub>G</sub> PGA	0.897 g

#### Table No. 3, 2019 CBC Site-Specific Seismic Parameters

Site Class D was determined based on the estimated average shear wave velocity of the site in the upper 30 meters (100 feet),  $V_{s30}$  of 293.0 m/sec (961 ft/sec), which calculated using the SPTPROP software (InfraGEO, 2020) based on the correlation with SPT blow counts by Brandenberg, Bellana and Shantz (2010). Extrapolation of estimated shear wave velocities from 50-ft depth to 100-ft depth was performed using the method proposed by Boore (2004). The Modified California Sampler blow counts were converted to equivalent SPT blow counts by multiplying the value by 0.65 to account for end-area effects.

A seismic deaggregation analysis conducted using the USGS Unified Hazard online tool shows the magnitude 7.31 event located approximately 5.23 miles (8.41 km) from the project site contributes the most to the seismic hazard at the project site.

#### 7.0 EARTHWORK RECOMMENDATIONS

#### 7.1 General Evaluation

Site earthwork recommendations provided in this section are based on our experience with similar projects and our evaluation of this study. Based on our understanding of the proposed project and the results of our field exploration, laboratory testing, and analysis of subsurface conditions at the site, we anticipate that the main earthwork activities associated with construction will be remedial grading (over-excavation and recompaction), foundation excavations and trench excavation/backfill for utilities.

Excavated site soils, free of grass, roots, organic matter, deleterious materials and rock particles larger than three (3) inches in the largest dimension, should be suitable for placement as compacted fill. Any import fill should be tested and approved by geotechnical engineer or their representative. Any import fill should have an expansion potential less than 20. All compacted fill soils should be observed and tested by a Converse representative in accordance with the specifications presented in this section.

#### 7.2 Over-Excavation

Prior to the start of construction, all loose soil, fill, and soil disturbed during demolition should be removed to firm and unyielding native material or compacted fill.

Due to the undocumented fills encountered at the site, we recommend over-excavation and re-compaction for structure footings to be at least five (5) feet below the existing grade or 3 feet below bottom of footings, whichever is deeper. Deeper removal and recompaction will be needed if firm soil conditions are not exposed on the excavation bottom. Over-excavation and re-compaction should extend at least five (5) feet laterally beyond the limits of perimeter footings where feasible. The on-site soil is considered suitable for re-use as compacted fill provided it is cleaned of organics (grass), roots, debris, deleterious materials and rocks larger than 3-inches.

Over-excavation and re-compaction for retaining walls, if any, should be two (2) feet below bottom of footings and should extend two (2) feet laterally beyond the retaining wall footing. The upper 24-inches of site soils should be removed and re-compacted in areas of sidewalks and surface parking. The upper 18 inches of soil should be processed and compacted in field areas. The over-excavation should extend two (2) feet laterally beyond the sidewalk and surface parking areas. If loose, disturbed, or otherwise unsuitable materials are encountered at the bottom of excavations, deeper removals will be required until firm native soils are encountered.

Excavation activities should not disturb adjacent utilities or undermine any adjacent buildings and structures to remain and be protected in place. Existing utilities should be removed and adequately capped and sealed at the project boundary line or salvaged/rerouted as designed.

The actual depth of removal should be based on recommendations and observation made during grading. Therefore, some variations in the depth and lateral extent of over-excavation recommended in this report should be anticipated.

#### 7.3 Structural Preparation

All exposed subgrade soil surface should be observed by a geotechnical engineer or their representative prior to placement of fill, base materials, or slabs. The exposed subgrade should be scarified at least 6 inches, moisture conditioned as needed to near-optimum moisture content, mixed and compacted to at least 90 percent relative compaction. The upper 12- inches of subgrade below new pavement should be compacted to at least 95 percent relative compaction.

If loose, yielding soil conditions are encountered at the excavation bottom, the following options can be considered:

- a. Over-excavate until a firm bottom is reached.
- b. Over-excavate an additional 18 inches deep, and then place at least 18-inch-thick compacted base material (CAB or equivalent) to bridge the soft bottom. Base materials should be compacted to at least 95% relative compaction.
- c. Over-excavate an additional 18-inches deep, and then place a layer of geotextile (i.e., Mirafi HP570, or equivalent), then place 18-inch-thick compacted base material (CAB or equivalent) to bridge the soft bottom. Base should be compacted to at least 95% relative compaction. An additional layer of geotextile may be needed on top of the compacted base materials depending on the actual site conditions.

#### 7.4 Engineered Fill

All engineered fills should be placed on competent, scarified and compacted bottom as evaluated by the geotechnical engineer and in accordance with the specifications presented in this section. Excavated site soils, free of deleterious materials and rock particles larger than three (3) inches in the largest dimension, should be suitable for placement as compacted fill. Any proposed import fill should be evaluated and approved by geotechnical engineer or their representatives prior to import to the site. Import fill material should have an expansion index less than 20.

Prior to compaction, fill materials should be thoroughly mixed, and moisture conditioned within three (3) percent of the optimum moisture content for granular soils and to approximate three (3) percent above the optimum moisture for fine-grained soils. Fill soils shall be evenly spread in maximum 8-inch lifts, watered, or dried as necessary, mixed, and compacted to at least the density specified below. The fill shall be placed and compacted on a horizontal plane, unless otherwise approved by the geotechnical engineer. All fills, if not specified otherwise elsewhere in this report, should be compacted to at least 90 percent of the laboratory dry density in accordance with the ASTM Standard D2922 test method.

#### 7.5 Excavatability

Based on our field exploration, the earth materials at the site may be excavated with conventional heavy-duty earth moving and trenching equipment. The onsite materials may contain demolition debris and gravel and/or cobbles. Earthwork should be performed with suitable equipment and methods for removal of debris from the engineered fill.

#### 7.6 Expansive Soil

One (1) expansion index test was performed in accordance with ASTM Standard D4829 for the upper five (5) feet of soil. Results of the test indicated an expansion index of 0 in BH-1 which corresponds to very low expansion potential. Mitigation for expansive soil is not necessary based on the soil materials encountered. The on-site soil materials will be

mixed during the grading and the expansion potential might change. Therefore, the expansion potential of site soils should be verified after the grading as slabs, foundations and pavement placed directly on expansive subgrade soil will likely crack over time.

During construction, grading will mix and relocate the site soils, and additional fill soils may be added. <u>The expansion potential of the finish-grade soils should be tested at the completion of grading</u>. Shallow foundations should be designed to accommodate the anticipated soil expansion. Any proposed import fill should have an expansion index less than 20 and should be evaluated and approved by Converse prior to import to the site.

#### 7.7 Trench Zone Backfill

The following specifications are recommended to provide a basis for quality control during the placement of trench backfill.

Trench excavations to receive backfill shall be free of trash, debris, or other unsatisfactory materials at the time of backfill placement. Excavated on-site soils free of oversize particles, defined as larger than one (1) inch in maximum dimension in the upper 12 inches of subgrade soils and larger than three (3) inches in the largest dimension in the trench backfill below, and deleterious matter after proper processing may be used to backfill the trench zone. Imported trench backfill, if used, should be approved by the project soils consultant prior to delivery at the site. No more than 30 percent of the backfill volume should be larger than <sup>3</sup>/<sub>4</sub> inch in the largest dimension.

Trench backfill shall be compacted to 90 percent of the laboratory maximum dry density as per ASTM Standard D2922 test method. At least the upper twelve (12) inches of trench underlying pavements should be compacted to at least 95 percent of the laboratory maximum dry density.

Trench backfill shall be compacted by mechanical methods, such as sheepsfoot, vibrating or pneumatic rollers, or mechanical tampers, to achieve the density specified herein. The backfill materials shall be brought to within three (3) percent of optimum moisture content and then placed in horizontal layers if the expansion index is less than or equal to 30. Should the expansion index be greater than 30, backfill materials shall be brought to approximately three (3) percent above optimum moisture content. The thickness of uncompacted layers should not exceed eight (8) inches. Each layer shall be evenly spread, moistened, or dried as necessary, and then tamped or rolled until the specified density has been achieved.

The contractor shall select the equipment and processes to be used to achieve the specified density without damage to adjacent ground and completed work. The field density of the compacted soil shall be measured by the ASTM Standard D1556 or ASTM Standard D2922 test methods or equivalent. Observation and field tests should be performed by geotechnical engineer or their representatives during construction to

Converse Consultants

confirm that the required degree of compaction has been obtained. Where compaction is less than that specified, additional compactive effort shall be made with adjustment of the moisture content as necessary, until the specified compaction is obtained. It should be the responsibility of the contractor to maintain safe conditions during cut and/or fill operations. Trench backfill shall not be placed, spread, or rolled during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations shall not be resumed until field tests by the project's geotechnical consultant indicate that the moisture content and density of the fill are as previously specified.

Imported soils, if any, used as compacted trench backfill should be predominantly granular and meet the following criteria:

- Expansion Index less than 20
- Free of all deleterious materials
- Contain no particles larger than 3 inches in the largest dimension
- Contain less than 30 percent by weight retained on <sup>3</sup>/<sub>4</sub>-inch sieve
- Contain at least 15 percent fines (passing #200 sieve)
- Have a Plasticity Index of 10 or less

Any import fill should be tested and approved by the geotechnical representative prior to delivery to the site.

#### 7.8 Shrinkage and Subsidence

Soil shrinkage and/or bulking as a result of remedial grading depends on several factors including the depth of over-excavation, and the grading method and equipment utilized, and average relative compaction. For preliminary estimation, bulking and shrinkage factors for various units of earth material at the site may be taken as presented below:

- The approximate shrinkage factor for the undocumented fill soils is estimated to range from ten (10) to fifteen (15) percent.
- The approximate shrinkage factor for the native alluvial soils is estimated to range from five (5) to ten (10) percent.
- For estimation purposes, ground subsidence may be taken as 0.1 feet as a result of remedial grading.

Although these values are only approximate, they represent our best estimates of the factors to be used to calculate lost volume that may occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field-testing using the actual equipment and grading techniques be conducted.

The various design recommendations provided in this section are based on the assumptions that in preparing the site, the earthwork and site grading recommendations provided in this report will be followed.

#### 8.0 DESIGN RECOMMENDATIONS

Based on the results of our background review, subsurface exploration, laboratory testing, geotechnical analyses, and understanding of the planned site development, it is our opinion that the proposed project is feasible from a geotechnical standpoint, provided the following conclusions and recommendations are incorporated into the project plans and specifications, and are followed during site construction.

Remedial grading consisting of over-excavation and re-compaction is required for the surficial soils to provide structural support of appurtenant improvements.

Shallow foundations can be used to support the proposed buildings with over-excavation and re-compaction of five (5) feet below the existing grade or 3 feet below bottom of footings, whichever is deeper. Flexible utility connections can be used to minimize the damage on utilities during seismic event. The seismic settlement is expected to be in range of 1.0 inches considering the depth of foundation and recommended overexcavation and re-compaction. For other non-building structures such as retaining walls, shallow foundation may be used.

#### 8.1 Shallow Foundations

#### 8.1.1 Vertical Capacity

The proposed New Early Education/Kindergarten 1-story Classroom Building can be supported by conventional shallow footings. We recommend continuous and square footings be founded at least 18 inches below lowest adjacent final grade entirely into compacted fill or into native soil. A minimum footing width of 24 inches is recommended for square footings and 18 inches for continuous footings. The allowable bearing value for footings with above minimum sizes founded on compacted fill and competent native soils may be designed for a net bearing pressure of 3,000 pounds per square foot (psf) for dead-plus-live-loads. The net allowable bearing pressure can be increased by 250 psf for each additional foot of excavation depth and by 250 psf for each additional foot of excavation width up to a maximum value of 4,500 psf.

The net allowable bearing values indicated above are for the dead loads and frequently applied live loads and are obtained by applying a factor of safety of 3.0 to the net ultimate bearing capacity.

#### 8.1.2 Lateral Capacity

Resistance to lateral loads can be provided by friction acting at the base of the foundation and by passive earth pressure. A coefficient of friction of 0.3 may be assumed with normal dead load forces. An allowable passive earth pressure of 300 psf per foot of depth up to

a maximum of 3,000 psf may be used for footings poured against properly compacted fill. The values of coefficient of friction and allowable passive earth pressure include a factor of safety of 1.5.

#### 8.1.3 Static Settlement

The static settlement of structures supported on continuous and/or spread footings founded on compacted fill and native soil will depend on the actual footing dimensions and the imposed vertical loads. Based on the maximum allowable net bearing pressures presented above, static settlement is anticipated to be less than 1.0 inch. Differential settlement is expected to be up to one-half of the total settlement over a 30-foot span.

#### 8.1.4 Dynamic Increases

Bearing values indicated above are for total dead load and frequently applied live loads. The above vertical bearing may be increased by 33% for short durations of loading which will include the effect of wind or seismic forces. The allowable passive pressure may be increased by 33% for lateral loading due to wind or seismic forces.

#### 8.2 Cast-In-Drilled-Hole Pile Foundations for Musco Lighting

The planned Musco Lighting poles may be supported on a Cast-In-Drilled-Hole (CIDH) pile foundation provided the following recommendations are incorporated into design and construction.

#### 8.2.1 Vertical Capacity

CIDH piles should be at least 24-inches in diameter extending at least 20 feet below adjacent final grade on compacted fill or native alluvial soils or bedrock and can be designed for an allowable skin friction of 200 psf against the perimeter of pile. The diameter and length of CIDH pile shall be determined by the structural engineer based on design loads. The uplift capacities can be taken as one-half of compressive capacities for pile design.

#### 8.2.2 Lateral Capacity

Resistance to lateral loads can be provided by friction acting at the base of the foundation and by passive earth pressure. A coefficient of friction of 0.30 may be assumed with normal dead load forces. An allowable passive earth pressure of 300 psf per foot of depth up to a maximum of 3,000 psf may be used for foundations poured against compacted fill. The values of coefficient of friction and allowable passive earth pressure include a factor of safety of 1.5.

For ground surface restrained by concrete slab, the passive resistance may be calculated from the ground surface. For unrestrained ground condition, the passive resistance of the upper one (1) foot of earth material should be neglected in design.

#### 8.2.3 Settlement

Based on the maximum allowable net vertical capacity presented above, static settlement is anticipated to be less than 0.5 inch.

#### 8.3 Cast-In-Drilled-Hole Pile Foundations for Non-building Structures

The planned non-building structures (e.g., lighting for parking lot, walkway, and court, fence walls, signs, etc.) may be supported on a Cast-In-Drilled-Hole (CIDH) pile foundation provided the following recommendations are incorporated into design and construction.

#### 8.3.1 Vertical Capacity

CIDH piles should be at least 18-inches in diameter and can be designed for an allowable skin friction of 150 psf against the perimeter of pile. The diameter and length of CIDH pile shall be determined by the structural engineer based on design loads. The uplift capacities can be taken as one-half of compressive capacities for pile design.

#### 8.3.2 Lateral Capacity

Resistance to lateral loads can be provided by friction acting at the base of the foundation and by passive earth pressure. A coefficient of friction of 0.30 may be assumed with normal dead load forces. An allowable passive earth pressure of 300 psf per foot of depth up to a maximum of 3,000 psf may be used for foundations poured against compacted fill. The values of coefficient of friction and allowable passive earth pressure include a factor of safety of 1.5.

For ground surface restrained by concrete slab, the passive resistance may be calculated from the ground surface. For unrestrained ground condition, the passive resistance of the upper one (1) foot of earth material should be neglected in design.

#### 8.3.3 Settlement

Based on the maximum allowable net vertical capacity presented above, static settlement is anticipated to be less than 0.5 inch.

#### 8.4 Slabs-on-Grade

Slabs-on-grade should have a minimum thickness of five (5) inches nominal for support of normal ground-floor live loads. Minimum reinforcement for slabs-on-grade should be No. 4 reinforcing bars, spaced at 18 inches on-center each way. The thickness and reinforcement of more heavily loaded slabs will be dependent upon the anticipated loads and should be designed by a structural engineer. A static modulus of subgrade reaction equal to 125 pounds per square inch per inch may be used in structural design of concrete slabs-on-grade.

It is critical that the exposed subgrade soils should not be allowed to desiccate prior to the slab pour. Care should be taken during concrete placement to avoid slab curling. Slabs should be designed and constructed as promulgated by the ACI and Portland Cement Association (PCA). Prior to the slab pour, all utility trenches should be properly backfilled and compacted.

In areas where a moisture-sensitive floor covering (such as vinyl tile or carpet) is used, a minimum 15-mil-thick moisture retarder/barrier between the bottom of slab and subgrade that meets the performance criteria of ASTM E1745 Class A material. Retarder/barrier sheets should be overlapped a minimum of six inches and should be taped or otherwise sealed per the product specifications.

#### 8.5 Modulus of Subgrade Reaction

For the subject project, design of the structures supported on compacted fill subgrade prepared in accordance with the recommendations provided in this report may be based on a soil modulus of subgrade reaction of  $(k_s)$  of 150 pounds per square inch per inch.

#### 8.6 Lateral Earth Pressure

Although not anticipated, the following provisional design values may be used for any utility vaults and/or walls below grade that are less than 8 feet high.

The earth pressure behind any buried wall depends primarily on the allowable wall movement, type of soil behind the wall, backfill slopes, wall inclination, surcharges, and any hydrostatic pressure. The following earth pressures are recommended for vertical walls with no hydrostatic pressure.

Backfill Slope (H:V)	Cantilever Wall Equivalent Fluid Pressure (pcf)	Restrained Wall (psf)
Level	35 (triangular pressure distribution)	55 (triangular pressure distribution)

#### Table No. 4, Lateral Earth Pressures for Retaining Wall Design

The recommended lateral pressures assume that the walls are fully back-drained to prevent build-up of hydrostatic pressure. Adequate drainage could be provided by means of permeable drainage materials wrapped in filter fabric installed behind the walls. The drainage system should consist of perforated pipe surrounded by a minimum one (1) square feet per lineal feet of free draining, uniformly graded, 3/4-inch washed, crushed aggregate, and wrapped in filter fabric such as Mirafi 140N or equivalent. The filter fabric should overlap approximately 12 inches or more at the joints. The subdrain pipe should consist of perforated, four-inch diameter, rigid ABS (SDR-35) or Schedule 40 PVC Pipe, or equivalent, with perforations placed down. Alternatively, a prefabricated drainage composite system such as the Miradrain G100N or equivalent can be used. The subdrain should be connected to solid pipe outlets, with a maximum outlet spacing of 100 feet. Waterproofing membranes should be added to the subterranean wall levels for moisture sensitive areas to mitigate moisture migration through the walls.

In addition, walls with inclined backfill should be designed for an additional equivalent fluid pressure of one (1) pound per cubic foot for every two (2) degrees of slope inclination. Walls subjected to surcharge loads located within a distance equal to the height of the wall should be designed for an additional uniform lateral pressure equal to one-third or one-half the anticipated surcharge load for unrestrained or restrained walls, respectively. These values are applicable for backfill placed between the wall stem and an imaginary plane rising 45 degrees from below the edge (heel) of the wall footings.

Retaining walls taller than 6 feet should be designed to resist additional earth pressure caused by seismic ground shaking based on CBC latest edition. A seismic earth pressure of 20H (psf), based on an inverted triangular distribution, can be used for design of wall.

#### 8.7 Soil Corrosivity Evaluation

The results of chemical testing of one soil sample from the project site was evaluated for corrosivity evaluation with respect to common construction materials such as concrete and steel (if present). The test results are presented in Appendix B, *Laboratory Testing Program* and are discussed below.

The results of the pH test indicate the soil has pH of 7.62, which should not have an adverse effect on buried concrete or metal.

The sulfate content of the sampled soil corresponds to American Concrete Institute (ACI) exposure category S0 for this sulfate concentration (ACI 318-14, Table 19.3.1.1). No concrete type restrictions are specified for exposure category S0 (ACI 318-14, Table 19.3.2.1). A minimum compressive strength of 2,500 psi is recommended.

We anticipate that concrete structures, if any, will be exposed to moisture from precipitation and irrigation. Based on the alignments location and the results of chloride testing of the site soils, we do not anticipate concrete structures will be exposed to

external sources of chlorides, such as deicing chemicals, salt, brackish water, or seawater. ACI specifies exposure category C1 where concrete is exposed to moisture, but not to external sources of chlorides (ACI 318-14, Table 19.3.1.1). ACI provides concrete design recommendations in ACI 318-14, Table 19.3.2.1, including a compressive strength of at least 2,500 psi and a maximum chloride content of 0.3 percent.

According to Romanoff, 1957, the following table provides general guideline of soil corrosion based on electrical resistivity.

Soil Resistivity (ohm-cm) per Caltrans CT 643	Corrosivity Category
Over 10,000	Mildly corrosive
2,000 – 10,000	Moderately corrosive
1,000 – 2,000	corrosive
Less than 1,000	Severe corrosive

#### Table No. 5, Correlation Between Resistivity and Corrosion

The measured value of the minimum electrical resistivity of the sample when saturated was 3,200 ohm-cm for the site. This indicates that the soils tested are moderately corrosive to ferrous metals in contact with the soil. <u>Converse does not practice in the area of corrosion consulting</u>. If needed, a qualified corrosion consultant should provide appropriate corrosion mitigation measures for any ferrous metals in contact with the site soils. General considerations for corrosion mitigation measures may include the following:

- Steel and wire concrete reinforcement should have at least three inches of concrete cover where cast against soil, unformed.
- Below-grade ferrous metals should be given a high-quality protective coating, such as 18-mil plastic tape, extruded polyethylene, coal-tar enamel, or Portland cement mortar.
- Below-grade metals should be electrically insulated (isolated) from above-grade metals by means of dielectric fittings in ferrous utilities and/or exposed metal structures breaking grade.

#### 8.8 Flexible Pavement

The flexible pavement structural section design recommendations were performed in accordance with the method contained in the *CALTRANS Highway Design Manual*, Chapter 630 without the factor of safety. No specific traffic study was performed to determine the Traffic Index (TI) for the proposed project; therefore, a wide range of TI values were evaluated.

Due to various earth materials encountered at the site, flexible pavement structural section recommendations are prepared for subgrade soils with the design R-value of 50.

We recommend that the project structural engineer consider the traffic loading conditions at various locations and select the appropriate pavement sections from the following table:

Design R-value	Design TI	Asphalt Concrete (AC) Ov Structural	Full AC Structural Section	
		AC (inches)	AB (inches)	AC (inches)
	4.0	3.0	3.0	4.0
5.0	3.0	4.0	4.5	
47	6.0	4.0	4.0	5.0
47	7.0	4.0	4.5	6.5
	8.0	5.0	5.0	7.5
	9.0	6.0	6.0	9.0

#### Table No. 6, Flexible Pavement Structural Sections

Base material shall conform to requirements for Crushed Miscellaneous Base (CMB) or equivalent and should be placed in accordance with the requirements of the Standard Specifications for Public Works Construction (SSPWC, latest Edition). Asphaltic materials should conform to Section 203-1, "Paving Asphalt," of the Standard Specifications for Public Works Construction (SSPWC, latest Edition) and should be placed in accordance with Section 302-5, "Asphalt Concrete Pavement," of the SSPWC, 2018 edition.

Positive drainage should be provided away from all pavement areas to prevent seepage of surface and/or subsurface water into the pavement base and/or subgrade.

#### 8.9 Rigid Pavement

Rigid pavement design recommendations were provided in accordance with the Portland Cement Association's (PCA) Southwest Region Publication P-14, Portland Cement Concrete Pavement (PCCP) for Light, Medium and Heavy Traffic Rigid Pavement. We recommend that the project structural engineer consider the loading conditions at various locations and select the appropriate pavement sections from the following table:

Design R-Value	Design Traffic Index (TI)	PCCP Pavement Section (inches)	
	4.0	6.0	
	5.0	6.5	
47*	6.0	6.5	
47	7.0	7.0	
	8.0	7.5	
	9.0	8.0	

#### Table No. 7, Rigid Pavement Structural Sections

The above pavement section is based on a minimum 28-day Modulus of Rupture (M-R) of 550 psi and a compressive strength of 3,000 psi. The third point method of testing beams should be used to evaluate modulus of rupture. The concrete mix design should contain a minimum cement content of 5.5 sacks per cubic yard. Recommended maximum and minimum values of slump for pavement concrete are three inches to one inch, respectively.

Transverse contraction joints should not be spaced more than 10 feet and should be cut to a depth of 1/4 the thickness of the slab. Longitudinal joints should not be spaced more than 12 feet apart. A longitudinal joint is not necessary in the pavement adjacent to the curb and gutter section.

Prior to placement of concrete, at least the upper 12 inches of subgrade soils below rigid pavement sections should be compacted to at least 95 percent relative compaction as defined by the ASTM D 1557 standard test method.

Positive drainage should be provided away from all pavement areas to prevent seepage of surface and/or subsurface water into pavement base and/or subgrade.

#### 8.10 Site Drainage

Adequate positive drainage should be provided away from the structures to prevent ponding and to reduce percolation of water into structural backfill. We recommend that the landscape area immediately adjacent to the foundation shall be designed sloped away from the building with a minimum 5% slope gradient for at least 10 feet measured perpendicular to the face of the wall. Impervious surfaces within 10 feet of the building foundation shall be sloped a minimum of 2 percent away from the building per 2019 CBC.

Planters and landscaped areas adjacent to the building perimeter should be designed to minimize water infiltration into the subgrade soils. Gutters and downspouts should be installed on the roof, and runoff should be directed to the storm drain through non-erosive devices. Lower-level walkways and open patio areas may require special drainage provisions and sump pumps to provide suitable drainage.

#### 9.0 CONSTRUCTION RECOMMENDATIONS

#### 9.1 General

Site soils should be excavatable using conventional heavy-duty excavating equipment. Temporary sloped excavation is feasible if performed in accordance with the slope ratios provided in Section 9.2, *Temporary Excavations*. Existing utilities should be accurately located and either protected or removed as required. For steeper temporary construction slopes or deeper excavations, shoring should be provided by the contractor as necessary, to protect the workers in the excavation.

#### 9.2 Temporary Excavations

Based on the materials encountered in the exploratory borings, sloped temporary excavations may be constructed according to the slope ratios presented in Table No. 8, *Slope Ratios for Temporary Excavation*. Any loose utility trench backfill or other fill encountered in excavations will be less stable than the native soils. Temporary cuts encountering loose fill or loose dry sand should be constructed at a flatter gradient than presented in the following table:

Table No. 6, Slope Ratios for Temporary Excavation						
Maximum Depth of Cut	Maximum Slope Ratio*					
(feet)	(horizontal: vertical)					
0 – 4	Vertical					
4 – 8	1: 1					
8+	1.5: 1					

#### Table No. 8, Slope Ratios for Temporary Excavation

\*Slope ratio assumed to be uniform from top to toe of slope.

Surfaces exposed in slope excavations should be kept moist but not saturated to minimize raveling and sloughing during construction. Adequate provisions should be made to protect the slopes from erosion during periods of rainfall. Surcharge loads, including construction equipment, should not be placed within five (5) feet of the unsupported excavation edge. The above maximum slopes are based on a maximum height of six (6) feet of stockpiled soils placed at least five (5) feet from the excavation edge.

All applicable requirements of the California Construction and General Industry Safety Orders, the Occupational Safety and Health Act of 1987 and current amendments, and the Construction Safety Act should be met. The soils exposed in cuts should be observed during excavation by the project's geotechnical consultant. If potentially unstable soil conditions are encountered, modifications of slope ratios for temporary cuts may be required.

If the excavation occurs near existing structures, special construction considerations would be required during excavation to protect these existing structures during construction. The proposed excavation should not cause loss of bearing and/or lateral supports of the existing structures.

#### 9.3 Slot Cut Recommendations

Temporary excavations during possible improvements should not extend below a 1:1 horizontal:vertical (H:V) plane extending beyond and down from the bottom of the existing utility lines or structures. The remedial grading excavations should not cause loss of bearing and/or lateral support for adjacent utilities or structures.

If remedial grading excavations extend below a 1:1 horizontal:vertical (H:V) plane extending beyond and down from the bottom of adjacent off-site utility lines or structure foundations, shoring or slot cutting shall be employed. "A-B-C" slot cuts exposing native sandy soils may be excavated with maximum 8 feet wide and 8 feet depth sections to prevent the existing utility lines or off-site structures from becoming unstable. Backfill should be accomplished in the shortest period of time possible and in alternating sections.

The ABC slot cutting method for retaining walls could be a possible option as an alternative to shoring for excavation less than 8 feet or with cohesive soils. In general, for structures it is not recommended for slot cutting if the height of excavation exceeds more than 8 feet or into sandy soils and with surcharging load.

#### 9.4 Shoring Design

Temporary shoring will be required where open sloped excavations will not be feasible due to unstable soils or due to nearby existing structures or facilities. Temporary shoring may consist of conventional soldier piles and lagging or sheet piles. The shoring for the pipe excavations may be laterally supported by walers and cross bracing or may be cantilevered. Drilled excavations for soldier piles will require the use of drilling fluids to prevent caving and to maintain an opened hole for pile installation.

The active earth pressure behind any shoring depends primarily on the allowable movement, type of backfill materials, backfill slopes, wall inclination, surcharges, and any hydrostatic pressures.

The lateral earth pressures to be used in the design of shoring for each segment is presented in the following table.

Soil Parameters*	Values
Active Earth Pressure (Braced Shoring) (psf) (A)	35
Active Earth Pressure (Cantilever Shoring) (psf) (B)	40
At-Rest Earth Pressure (Cantilever Shoring) (psf) (C)	55
Passive earth pressure (psf per foot of depth) (D)	300
Maximum allowable bearing pressure against native soils (psf) (E)	3,000
Coefficient of friction between sheet pile and native soils, fs (F)	0.25

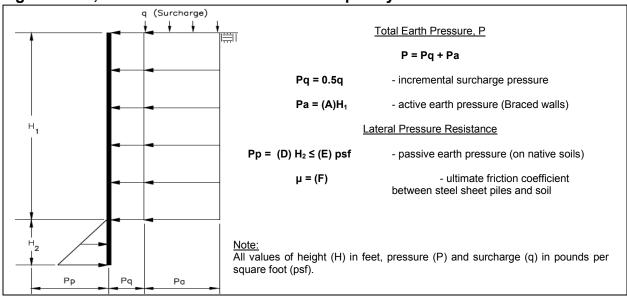

#### Table No. 9, Lateral Earth Pressures for Temporary Shoring

\* Parameters A through F are used in Figures No. 8 and 9.

Restrained (braced) shoring systems should be designed based on Figure No. 8, *Lateral Earth Pressures for Temporary Braced Excavation* to support a uniform rectangular lateral earth pressure.

Geotechnical Investigation Report New Early Education/Kindergarten Classroom Building Project Will Rogers Elementary School, Santa Monica, California Santa Monica Malibu Unified School District October 20, 2021 Page 25

#### Figure No. 8, Lateral Earth Pressures for Temporary Braced Excavation

Unrestrained (cantilever) design of cantilever shoring consisting of soldier piles spaced at least two diameters on-center or sheet piles, can be based on Figure No. 9, *Lateral Earth Pressures on Temporary Cantilever Wall*.

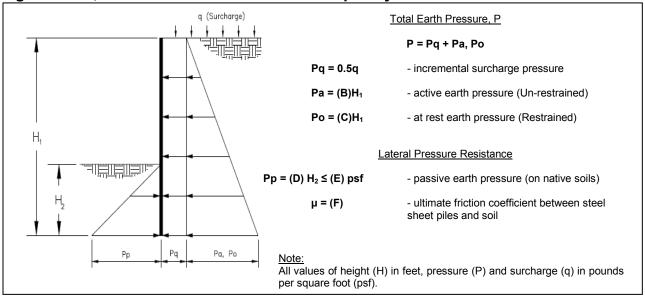

Figure No. 9, Lateral Earth Pressures on Temporary Cantilever Wall

The provided pressures assume no hydrostatic pressures. If hydrostatic pressures are allowed to build up, the incremental earth pressures below the ground-water level should be reduced by 50 percent and added to hydrostatic pressure for total lateral pressure.

Passive resistance includes a safety factor of 1.5. The upper 1 foot for passive resistance should be ignored unless the surface is confined by a pavement or slab.

In addition to the lateral earth pressure, surcharge pressures due to miscellaneous loads, such as soil stockpiles, vehicular traffic or construction equipment located adjacent to the shoring, should be included in the design of the shoring. A uniform lateral pressure of 100 psf should be included in the upper 10 feet of the shoring to account for normal vehicular and construction traffic within 10 feet of the trench excavation. As previously mentioned, all shoring should be designed and installed in accordance with state and federal safety regulations.

The contractor should have provisions for soldier pile and sheet pile removal. All voids resulting from removal of shoring should be filled. The method for filling voids should be selected by the contractor, depending on construction conditions, void dimensions, and available materials. The acceptable materials, in general, should be non-deleterious, and able to flow into the voids created by shoring removal (e.g. concrete slurry, "pea" gravel, etc.).

Excavations for the proposed pipeline should not extend below a 1:1 Horizontal: Vertical (H:V) plane extending from the bottom of any existing structures, utility lines or streets. Any proposed excavation should not cause loss of bearing and/or lateral supports of the existing utilities or streets.

If the excavation extends below a 1:1 (H:V) plane extending from the bottom of the existing structures, utility lines or streets, a maximum of 10 feet of slope face parallel to the existing improvement should be exposed at a time to reduce the potential for instability. Backfill should be accomplished in the shortest period of time and in alternating sections.

#### 9.5 Geotechnical Services During Construction

This report has been prepared to aid in the foundation plans and specifications, and to assist the architect, civil and structural engineers in the design of the proposed structures. It is recommended that this office be provided an opportunity to review final design drawings and specifications to verify that the recommendations of this report have been properly implemented.

Footing excavations should be observed by geotechnical engineer or their representative prior to placement of steel and concrete so that footings are founded on satisfactory materials and excavations are free of loose and disturbed materials. Trench backfill should be placed and compacted with observation and field density testing provided by this office.

During construction, the geotechnical engineer and/or their authorized representatives should be present at the site to provide a source of advice to the client regarding the geotechnical aspects of the project and to observe and test the earthwork performed. Their presence should not be construed as an acceptance of responsibility for the performance of the completed work, since it is the sole responsibility of the contractor performing the work to ensure that it complies with all applicable plans, specifications, ordinances, etc. This firm does not practice or consult in the field of safety engineering. We do not direct the contractor's operations and cannot be responsible for other than our own personnel on the site; therefore, the safety of others is the responsibility of the contractor. The contractor should notify the Owner if he considers any recommended actions presented herein to be unsafe.

#### 10.0 CLOSURE

The findings and recommendations of this report were prepared in accordance with generally accepted professional engineering and engineering geologic principles and practice. We make no other warranty, either expressed or implied. Our conclusions and recommendations are based on the results of the field and laboratory investigations, combined with an interpolation and extrapolation of soil conditions between and beyond boring locations. If conditions encountered during construction appear to be different from those shown by the borings, this office should be notified.

Design recommendations given in this report are based on the assumption that the earthwork and site grading recommendations contained in this report are implemented. Additional consultation may be prudent to interpret Converse's findings for contractors, or to possibly refine these recommendations based upon the review of the final site grading and actual site conditions encountered during construction. If the scope of the project changes, if project completion is to be delayed, or if the report is to be used for another purpose, this office should be consulted.

Field Exploration

#### APPENDIX A: FIELD EXPLORATION

Field exploration included a site reconnaissance and subsurface exploration program. During the site reconnaissance, the surface conditions were noted, and the approximate locations of the borings were determined. The exploratory borings were approximately located using existing boundary and other features as a guide and should be considered accurate only to the degree implied by the method used. The various field study methods performed are discussed below.

#### **Exploratory Borings**

Total three (3) exploratory borings (BH-1 through BH-3) were drilled within the project sites on September 16, 2021. Borings were advanced using a truck mounted drill rig with an 8-inch diameter hollow stem auger to depths ranging from 6.5 to 51.5 feet below the existing ground surface (bgs). Each boring was visually logged by a Converse engineer and sampled at regular intervals and at changes in subsurface soils. Where appropriate, field descriptions and classifications have been modified to reflect laboratory test results.

Ring samples of the subsurface materials were obtained at frequent intervals in the exploratory borings using a drive sampler (2.4-inches inside diameter and 3.0-inches outside diameter) lined with sample rings. The steel ring sampler was driven into the bottom of the borehole with successive drops of a 140-pound driving weight falling 30 inches, using an automatic hammer. Samples are retained in brass rings (2.4-inches inside diameter and 1.0-inch in height). The central portion of the samples were retained and carefully sealed in waterproof plastic containers for shipment to the Converse laboratory. Blow counts for each sample interval are presented on the logs of borings. Bulk samples of typical soil types were also obtained.

Standard Penetration Test (SPT) was also performed using a standard split-barrel sampler (1.4-inches inside diameter and 2.0-inches outside diameter). The mechanically driven hammer for the SPT sampler was 140 pounds, failing 30 inches for each blow. The recorded blow counts for every six inches for a total of 1.5 feet of sampler penetration are shown on the Logs of Borings in the "BLOWS" column. The standard penetration test was performed in accordance with the ASTM Standard D1586 test method.

It should be noted that the exact depths at which material changes occur cannot always be established accurately. Changes in material conditions that occur between driven samples are indicated in the logs at the top of the next drive sample. A key to soil symbols and terms is presented as Drawing Nos. A-1a to A-1b, *Unified Soil Classification Chart*. The log of the exploratory boring is presented in Drawing Nos. A-2 through A-4, *Log of Borings*.

APPARENT DENSITY OF COHESIONLESS SOILS						
Descriptor	SPT N <sub>60</sub> - Value (blows / foot)	CA Sampler				
Very Loose	<4	<5				
Loose	4- 10	5 - 12				
Medium Dense	11 - 30	13 - 35				
Dense	31 - 50	36 - 60				
Very Dense	>50	>60				

PERCENT OF PROPORTION OF SOILS						
Descriptor	Criteria					
Trace (fine)/ Scattered (coarse)	Particles are present but estimated to be less than 5%					
Few	5 to 10%					
Little	15 to 25%					
Some	30 to 45%					
Mostly	50 to 100%					

MOISTURE					
Descriptor	Criteria				
Dry	Absence of moisture, dusty, dry to the touch				
Moist	Damp but no visible water				
Wet	Visible free water, usually soil is below water table				

SOIL PARTICLE SIZE						
Descriptor		Size				
Boulder		> 12 inches				
Cobble		3 to 12 inches				
Gravel	Coarse Fine	3/4 inch to 3 inches No. 4 Sieve to 3/4 inch				
Sand	Coarse Medium Fine	No. 10 Sieve to No. 4 Sieve No. 40 Sieve to No. 10 Sieve No. 200 Sieve to No. No. 40 Sieve				
Silt and Clay		Passing No. 200 Sieve				

	PLASTICITY OF FINE-GRAINED SOILS					
Descriptor	Criteria					
Nonplastic	A 1/8-inch thread cannot be rolled at any water content.					
Low	The thread can barely be rolled, and the lump cannot be formed when drier than the plastic limit.					
Medium	The thread is easy to roll, and not much time is required to reach the plastic limit; it cannot be rerolled after reaching the plastic limit. The lump crumbles when drier than the plastic limit.					
High	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump can be formed without crumbling when drier than the plastic limit.					

	<b>CEMENTATION/ Induration</b>
Descriptor	Criteria
Weak	Crumbles or breaks with handling or little finger pressure.
Moderate	Crumbles or breaks with considerable finger pressure.
Strong	Will not crumble or break with finger pressure.

**NOTE:** This legend sheet provides descriptions and associated criteria for required soil description components only. Refer to Caltrans Soil and Rock Logging, Classification, and Presentation Manual (2010), Section 2, for tables of additional soil description components and discussion of soil description and identification.

# Appendix B

Laboratory Testing Program

#### APPENDIX B: LABORATORY TESTING PROGRAM

Tests were conducted in our laboratory on representative soil samples for the purpose of classification and evaluation of their relevant physical characteristics and engineering properties. The amount and selection of tests were based on the geotechnical requirements of the project. Test results are presented herein and on the Logs of Borings in Appendix A, *Field Exploration*. The following is a summary of the laboratory tests conducted for this project.

#### Moisture Content and Dry Density

Results of moisture content and dry density tests performed on relatively undisturbed ring samples were used to aid in the classification of the soils and to provide quantitative measure of the *in-situ* dry density. Data obtained from this test provides qualitative information on strength and compressibility characteristics of site soils. For test results, see the Logs of Borings in Appendix A, *Field Exploration*.

#### Expansion Index Test

One (1) representative soil sample was tested to evaluate the expansion potential of material encountered at the site. The test was conducted in accordance with ASTM D4829 Standard. Test results are presented in the following table:

Table No. B-1, Summary of Expansion muck rest Result							
Boring No.	Depth (feet)	Soil Description	Expansion Index	Expansion Potential			
BH-1	0-5	Silty Sand (SM)	0	Very Low			

#### Table No. B-1, Summary of Expansion Index Test Result

#### Soil Corrosivity

One (1) representative soil sample was tested to determine minimum electrical resistivity, pH, and chemical content, including chloride concentrations, and soluble sulfate. The purpose of these tests is to determine the corrosion potential of site soils when placed in contact with common construction materials. These tests were performed by EGL in Arcadia, California. The test results received from EGL are included in the following table:

#### Table No. B-2, Summary of Corrosivity Test Results

Boring No.	Sample Depth (feet)	pH (Caltrans 643)	Soluble Chlorides (Caltrans 422) ppm	Soluble Sulfate (Caltrans 417) (%)	Saturated Resistivity (Caltrans 643) Ohm-cm
BH-2	0-5	7.62	255	0.021	3,200

#### **R-Value**

One representative bulk soil sample was tested for resistance value (R-value) in accordance with California Test Method CT301. This test is designed to provide a relative measure of soil strength for use in pavement design. The test result is presented in the table below.

#### Table No. B-3, Summary of R-Value Test Result

Boring No.	Depth (feet)	Soil Classification	Measured R-Value
BH-3	0-5	Silty Sand (SM)	47

#### Percent Finer Than Sieve No. 200

The percent finer than sieve No. 200 test was performed on two (2) selected soil samples to aid in the classification of the on-site soils and to estimate other engineering parameters. Testing was performed in general accordance with the ASTM Standard D1140 test method. The test results are presented in the boring logs.

#### Table No. B-4, Summary of Percent Passing Sieve #200 Test Results

Boring No.	Depth (feet)	Soil Classification	Percent Passing Sieve No. 200
BH-1	20-21.5	Poorly Graded Sand with silt (SP-SM)	11.8
BH-1	30-31.5	Poorly Graded Sand with silt (SP-SM)	10.3
BH-1	40-41.5	Poorly Graded Sand with silt (SP-SM)	11.9
BH-1	50-51.5	Poorly Graded Sand with silt (SP-SM)	12.0

#### Grain-Size Analysis

To assist in classification of soils, mechanical grain-size analysis was performed on three (3) selected samples. Testing was performed in general accordance with the ASTM Standard C136 test method. Grain-size curve is shown in Drawing No. B-1, *Grain Size Distribution Results*.

#### Table No. B-5, Summary of Grain Size Distribution Test Results

Boring No.	Depth (feet)	Soil Classification	% Gravel	% Sand	%Silt	%Clay
BH-1	0-5	Silty Sand (SM)	0.0	61.7	38	8.3

#### Maximum Dry Density Test

One (1) laboratory maximum dry density-moisture content relationship test was performed on a representative bulk sample of the upper 5 feet of soil material. The testing was conducted in accordance with ASTM Standard D1557 laboratory procedure. The test result is presented on Drawing No. B-2, *Moisture-Density Relationship Results*.

Table No. B-0, Summary of Moisture-Density Relationship Results						
Boring No.	Depth (feet)	Soil Description	Optimum Moisture (%)	Maximum Density (lb/cft)		
BH-2	0-5	Silty Sand (SM), dark brown	7.5	133.5		

#### Table No. B-6, Summary of Moisture-Density Relationship Results

#### **Direct Shear**

A Direct shear test was performed on one (1) relatively undisturbed samples at soaked moisture conditions. For each test, three samples contained in brass sampler rings were placed, one at a time, directly into the test apparatus and subjected to a range of normal loads appropriate for the anticipated conditions. The sand samples were then sheared at a constant strain rate of 0.025 inch/minute. Shear deformation was recorded until a maximum of about 0.250-inch shear displacement was achieved. Ultimate strength was selected from the shear-stress deformation data and plotted to determine the shear strength parameters. For test data, including sample density and moisture content, see Drawing No. B-3, *Direct Shear Test Results,* and the following table:

#### Table No. B-7, Summary of Direct Shear Test Results

Boring	Depth		Ultimate Strength Parameters			
No.	(feet)	Soil Classification	Friction Angle (degrees)	Cohesion (psf)		
BH-1	5.0-6.5	Poorly Graded Sand with silt (SP-SM)	37	80		

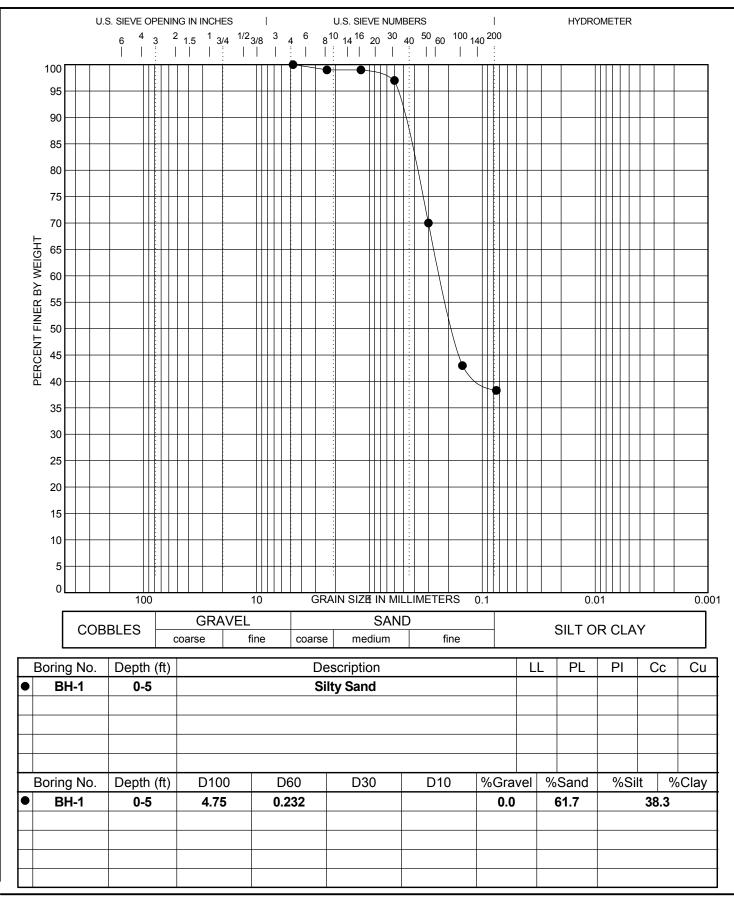

#### **Consolidation Test**

Consolidation tests were performed on one (1) relatively undisturbed sample. Data obtained from this test was used to evaluate the settlement characteristics of the foundation soils under load. Preparation for this test involved trimming the sample and placing the 1-inch-high brass ring into the test apparatus, which contained porous stones, both top and bottom, to accommodate drainage during testing. Normal axial loads were applied to one end of the sample through the porous stones, and the resulting deflections were recorded at various time periods. The load was increased after the sample reached a reasonable state equilibrium. Normal loads were applied at a constant load-increment ratio, successive loads being generally twice the preceding load. The sample was tested at field and submerged conditions. The test results, including sample density and moisture content, are presented in Drawing No. B-4, *Consolidation Test Results*.

#### Sample Storage

Soil samples presently stored in our laboratory will be discarded 30 days after the date of this report, unless this office receives a specific request to retain the samples for a longer period of time.

# Appendix C

Earthwork Specifications

# APPENDIX C: EARTHWORK SPECIFICATIONS

### Scope of Work

The work includes all labor, supplies and construction equipment required to construct the building pads in a good, workman-like manner, as shown on the drawings and herein specified. The major items of work covered in this section include the following:

- Site Inspection
- Authority of Geotechnical Engineer
- Site Clearing
- Excavations
- Preparation of Fill Areas
- Placement and Compaction of Fill
- Observation and Testing

### **Site Inspection**

- 1. The Contractor shall carefully examine the site and make all inspections necessary, in order to determine the full extent of the work required to make the completed work conform to the drawings and specifications. The Contractor shall satisfy himself as to the nature and location of the work, ground surface and the characteristics of equipment and facilities needed prior to and during prosecution of the work. The Contractor shall satisfy himself as to the character, quality, and quantity of surface and subsurface materials or obstacles to be encountered. Any inaccuracies or discrepancies between the actual field conditions and the drawings, or between the drawings and specifications must be brought to the owner's attention in order to clarify the exact nature of the work to be performed.
- 2. This Geotechnical Study Report by Converse Consultants may be used as a reference to the surface and subsurface conditions on this project. The information presented in this report is intended for use in design and is subject to confirmation of the conditions encountered during construction. The exploration logs and related information depict subsurface conditions only at the particular time and location designated on the boring logs. Subsurface conditions at other locations may differ from conditions encountered at the exploration locations. In addition, the passage of time may result in a change in subsurface conditions at the exploration locations. Any review of this information shall not relieve the Contractor from performing such independent investigation and evaluation to satisfy himself as to the nature of the surface and subsurface conditions to be encountered and the procedures to be used in performing his work.

### Authority of the Geotechnical Engineer

- 1. The Geotechnical Engineer will observe the placement of compacted fill and will take sufficient tests to evaluate the uniformity and degree of compaction of filled ground.
- 2. As the Owner's representative, the Geotechnical Engineer will (a) have the authority to cause the removal and replacement of loose, soft, disturbed, and other unsatisfactory soils and uncontrolled fill; (b) have the authority to approve the preparation of native ground to receive fill material; and (c) have the authority to approve or reject soils proposed for use in building areas.
- 3. The Civil Engineer and/or Owner will decide all questions regarding (a) the interpretation of the drawings and specifications, (b) the acceptable fulfillment of the contract on the part of the Contractor and (c) the matters of compensation.

### Site Clearing

- 1. Clearing and grubbing shall consist of the removal from building areas to be graded of all existing structures, pavement, utilities, and vegetation.
- 2. Organic and inorganic materials resulting from the clearing and grubbing operations shall be hauled away from the areas to be graded.

### Excavations

1. Based on observations made during our field explorations, the surficial soils can be excavated with conventional earthwork equipment.

### **Preparation of Fill Areas**

- 1. All organic material, organic soils, incompetent alluvium, undocumented fill soils and debris should be removed from the proposed building areas.
- 2. In order to provide uniform support for the new structures, the minimum depth of over-excavation should be five (5) feet below the existing grade, or 3 feet below proposed shallow foundations whichever is deeper. Deeper over-excavation will be needed if soft, yielding soils are exposed on the excavation bottom. The actual depth of removal should be determined based on observations made during grading. Over-excavation should extend a least five (5) feet beyond the limits of footings, or equal distance of over-excavation depth, whichever is greater, or as limited by the existing structures. Excavation activities should not disturb existing utilities, buildings, and remaining structures. Existing utilities should be removed and adequately capped at the project boundary line or salvaged/rerouted as

designed for sidewalks and flatwork area, at least the upper 24 inches of existing soils should be scarified and recompacted to at least 90 percent of compaction. Deeper over-excavation will be needed if soft, yielding soils are exposed on the excavation bottom. The excavation should be extended to at least 12 inches beyond the driveway and flatwork limit where space is permitted.

- 3. The subgrade in all areas to receive fill shall be scarified to a minimum depth of six inches, the soil moisture adjusted within three (3) percent above optimum, and then compacted to at least 90 percent of the laboratory maximum dry density as determined by ASTM Standard D1557 test method.
- 4. Compacted fill may be placed on native soils that have been properly scarified and re-compacted as discussed above.
- 5. All areas to receive compacted fill will be observed and approved by the Geotechnical Engineer before the placement of fill.

# Placement and Compaction of Fill

- 1. Compacted fill placed for the support of footings, slabs-on-grade, exterior concrete flatwork, and driveways will be considered structural fill. Structural fill may consist of approved on-site soils or imported fill that meets the criteria indicated below.
- 2. Fill consisting of selected on-site earth materials or imported soils approved by the Geotechnical Engineer shall be placed in layers on approved earth materials. Soils used as compacted structural fill shall have the following characteristics:
- 3. All fill soil particles shall not exceed three (3) inches in nominal size and shall be free of organic matter and miscellaneous inorganic debris and inert rubble.
- Imported fill materials shall have an Expansion Index (EI) less than 20. All imported fill should be compacted to at least 90 percent of the laboratory maximum dry density (ASTM Standard D1557) at about to three percent above optimum moisture.
- 5. Fill soils shall be evenly spread in maximum 8-inch lifts, watered, or dried as necessary, mixed, and compacted to at least the density specified below. The fill shall be placed and compacted on a horizontal plane, unless otherwise approved by the Geotechnical Engineer.
- 6. All fill placed at the site shall be compacted to at least 90 percent of the laboratory maximum dry density as determined by ASTM Standard D1557 test method. The on-site soils shall be moisture conditioned at approximate three (3) percent above the optimum moisture content.

- Representative samples of materials being used, as compacted fill will be analyzed in the laboratory by the Geotechnical Engineer to obtain information on their physical properties. Maximum laboratory density of each soil type used in the compacted fill will be determined by the ASTM Standard D1557 compaction method.
- 8. Fill materials shall not be placed, spread, or compacted during unfavorable weather conditions. When site grading is interrupted by heavy rain, filling operations shall not resume until the Geotechnical Engineer approves the moisture and density conditions of the previously placed fill.
- 9. It shall be the Grading Contractor's obligation to take all measures deemed necessary during grading to provide erosion control devices in order to protect slope areas and adjacent properties from storm damage and flood hazard originating on this project. It shall be the contractor's responsibility to maintain slopes in their as-graded form until all slopes are in satisfactory compliance with job specifications, all berms have been properly constructed, and all associated drainage devices meet the requirements of the Civil Engineer.

# Trench Backfill

The following specifications are recommended to provide a basis for quality control during the placement of trench backfill.

- 1. Trench excavations to receive backfill shall be free of trash, debris or other unsatisfactory materials at the time of backfill placement.
- 2. Trench backfill shall be compacted to a minimum relative compaction of 90 percent as per ASTM Standard D1557 test method.
- 3. Rocks larger than one inch should not be placed within 12 inches of the top of the pipeline or within the upper 12 inches of pavement or structure subgrade. No more than 30 percent of the backfill volume shall be larger than 3/4-inch in largest dimension. Rocks shall be well mixed with finer soil.
- 4. The pipe design engineer should select bedding material for the pipe. Bedding materials generally should have a Sand Equivalent (SE) greater than or equal to 30, as determined by the ASTM Standard D2419 test method.
- 5. Trench backfill shall be compacted by mechanical methods, such as sheepsfoot, vibrating or pneumatic rollers, or mechanical tampers, to achieve the density specified herein. The backfill materials shall be brought to between optimum and three percent above optimum, then placed in horizontal layers. The thickness of

uncompacted layers should not exceed eight inches. Each layer shall be evenly spread, moistened, or dried as necessary, and then tamped or rolled until the specified density has been achieved.

- 6. The contractor shall select the equipment and processes to be used to achieve the specified density without damage to adjacent ground and completed work.
- 7. The field density of the compacted soil shall be measured by the ASTM Standard D1556 or ASTM Standard D2922 test methods or equivalent.
- 8. Observation and field tests should be performed by geotechnical representative during construction to confirm that the required degree of compaction has been obtained. Where compaction is less than that specified, additional compactive effort shall be made with adjustment of the moisture content as necessary, until the specified compaction is obtained.
- 9. It should be the responsibility of the Contractor to maintain safe conditions during cut and/or fill operations.
- 10. Trench backfill shall not be placed, spread or rolled during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations shall not be resumed until field tests by the project's geotechnical consultant indicate that the moisture content and density of the fill are as previously specified.

# **Observation and Testing**

- 1. During the progress of grading, the Geotechnical Engineer will provide observation of the fill placement operations.
- Field density tests will be made during grading to provide an opinion on the degree of compaction being obtained by the contractor. Where compaction of less than specified herein is indicated, additional compactive effort with adjustment of the moisture content shall be made as necessary, until the required degree of compaction is obtained.
- 3. A sufficient number of field density tests will be performed to provide an opinion to the degree of compaction achieved. In general, density tests will be performed on each one-foot lift of fill, but not less than one for each 500 cubic yards of fill placed.

# Appendix D

Seismic Hazard Analysis Results

Site Class Determination

#### SIMPLIFIED EVALUATION OF SITE CLASS AND GEOTECHNICAL DESIGN PARAMETERS USING STANDARD PENETRATION TEST (SPT) DATA (Copyright © 2015, 2020, SPTPROP, All Rights Reserved; By: InfraGEO Software)

PROJEC	T INFORMATION	

PROJECT INFORMATION	
Project Name	New Early Education/Kindergarten Classroom Building
Project No.	21-31-226-01
Project Location	Santa Monica, CA
Analyzed By	Babak Abbasi
Reviewed By	Siva Sivathasan
GENERAL INPUT DATA	
Analysis Description	Will Rogers Elementary School
Boring ID No.	BH-1
Ground Surface Elevation	137.00 feet
Proposed Grade Elevation	137.00 feet
Total Unit Weight of New Fill	120.00 pcf
Borehole Diameter	8.00 inches
Hammer Weight	140.00 pounds
Hammer Drop	30.00 inches
Hammer Efficiency Ratio, ER	80.00 %
Hammer Dist. to Ground Surface	5.00 feet
Groundwater Depth During Test	46.50 feet

#### SPT BLOW COUNT AND RELATIVE DENSITY

- Based on the recommendations by Idriss and Boulanger (2008), the normalized SPT blow count is defined as  $(N_1)_{60} = N_{60} C_N$ where  $N_{60} = N_{field} C_E C_B C_R C_S$ and the relative density of granular soils is estimated as  $D_r = 15 [(N_1)_{60}]^{0.5}$  in percent

#### SHEAR WAVE VELOCITY AND SITE CLASSIFICATION

Shear wave velocities are estimated based on empirical correlations with SPT N60 values for various soil types, as derived by Brandenberg, Bellana and Shantz (2010) from regression analyses. - Site classification is analyzed using the method by Boore (2004). Ave. Shear Wave Velocity (Top Depth d), V<sub>s.d</sub> = 249.00 m/s Ave. Shear Wave Velocity (Top 30 m),  $V_{s,30} = 10^{a+b \log (Vs,d)}$ where a = 0.01389 b = 1.02370 Coefficients a and b vary with depth, as derived by Boore (2004). Computed V<sub>s,30</sub> = 293.0 m/s

Site Class = D

#### SOIL STRENGTH AND DEFORMATION MODULUS PARAMETERS

- For granular soils, the effective peak friction angle, \u03c6', is estimated from correlations with the normalized SPT blow count, (N1)60 from Bowles (1996) and recommended adjustments from Caltrans Geotechnical Manual (2014). For cohesive soils, the undrained shear strength, Su, is based on field measurements with torvane or pocket penetrometer. When only SPT values are available, Su is estimated using the correlation chart with (N1)60 value provided in the Caltrans Geotechnical Manual (2014).

Modulus of Elasticity, Es, values for granular soils and cohesive soils are estimated from correlations with SPT N60

and undrained shear strength, Su, respectively summarized by Bowles (1996).

Shear Modulus,  $G = E_s / [3 (1 - 2\mu)]$  and Bulk Modulus,  $K = E_s / [2 (1 + \mu)]$  based on theory of elasticity

where µ is the Poisson's ratio of the soil. Typical values of Poisson's ratio are estimated from various references.

# **MCE<sub>R</sub>** Response Spectrum Table

\* Site-Specific MCER response spectrum obtained using obtained weighted geometric averaging procedure. See User Guide: https://data2.scec.org/ugms-mcerGM-tool\_v18.4/guide

# Site-Specific MCE<sub>R</sub> & Design Response Spectral Accelerations

### **Important Note**

The site-specific, design response spectral acceleration, Sa, returned by this tool for user-specified inputs, must be compared to the minimum Sa requirement described in Section 21.3 of ASCE 7-16 (second and third paragraphs). This minimum Sa is computed as 80% of the design response spectrum derived from the SDS, SD1, and TL values obtained from the ASCE tool at https://asce7hazardtool.online/. The larger of the site-specific Sa and the 80% minimum Sa at each period, T, is the final design response spectral acceleration. This final Sa x 1.5 is the final MCER response spectral acceleration.

# About UGMS

The UGMS MCER tool was developed by the SCEC Committee for Utilization of Ground Motion Simulations (or "UGMS Committee") from research supported by the Southern California Earthquake Center (SCEC). SCEC is funded by NSF Cooperative Agreement EAR-1033462 & USGS Cooperative Agreement G12AC20038. For more information on the UGMS Committee, visit https://www.scec.org/research/ugms.

# User Guide

# Background

The paper Site-Specific  $MCE_R$  Response Spectra for Los Angeles Region based on 3-D Numerical Simulations and the NGA West2 Equations (https://www.scec.org/publication/8024) provides background information and the method used to obtain the site-specific  $MCE_R$  response spectra.

# Abstract

The Utilization of Ground Motion Simulation (UGMS) committee of the Southern California Earthquake Center (SCEC) developed site-specific, risk-targeted Maximum Considered Earthquake (MCE<sub>R</sub>) response spectra for the Los Angeles region. The long period (T  $\geq$  2-sec) MCE<sub>R</sub> response spectra were computed as the weighted average of MCE<sub>R</sub> spectral accelerations derived from (1) 3-D numerical ground-motion simulations using the CyberShake computational platform, and (2) empirical ground-motion prediction equations (GMPEs) from the Pacific Earthquake Engineering Research (PEER) Center NGAWest2 project. The short period (T < 2- sec) MCE<sub>R</sub> response spectra were computed exclusively from the NGAWest2 GMPEs. A web- based lookup tool was also developed so users can obtain the MCE<sub>R</sub> response spectrum for a specified latitude and longitude and for a specified site class or 30-m average shear-wave velocity, VS30. The tool provides acceleration ordinates of the MCE<sub>R</sub> response spectrum at 21 natural periods in the 0 to 10-sec band.

# Citation

Crouse, C., Jordan, T. H., Milner, K. R., Goulet, C. A., Callaghan, S., & Graves, R. W. (2018, 06). Site-Specific MCER Response Spectra for Los Angeles Region based on 3-D Numerical Simulations and the NGA West2 Equations. Presentation at 11th National Conference in Earthquake Engineering.

**Important Note.** The site-specific, design response spectral acceleration,  $S_a$ , returned by this tool for userspecified inputs, <u>must</u> be compared to the minimum  $S_a$  requirement described in Section 21.3 of ASCE 7-16 (second and third paragraphs). This minimum  $S_a$  is computed as 80% of the design response spectrum derived from the  $S_{DS}$ ,  $S_{D1}$ , and  $T_L$  values obtained from the ASCE tool at https://asce7hazardtool.online/ (https://asce7hazardtool.online/). The larger of the site-specific  $S_a$  and the 80% minimum  $S_a$  at each period, T, is the final design response spectral acceleration. This final  $S_a \times 1.5$  is the final MCE<sub>R</sub> response spectral acceleration.

### 1.0 Introduction.

The Application Page (/ugms-mcerGM-tool\_v18.4/) is where the user specifies the inputs required to obtain the site-specific MCE<sub>R</sub> response spectrum and site-specific design response spectrum (= $2/3 \times MCE_R$  spectrum), subject to the 80% minimum requirement described in the **Important Note** above.

### 2.0 Instructions for Specification of Inputs.

# 2.1 Site Location.

The user can either (1) locate the site on the map by using the cursor and zoom-in (+) or zoom-out (-) feature, or (2) enter the latitude and longitude in the boxes to the left of the map. The map, which initially shows the rectangular region where the lookup tool is valid, allows the user to zoom-in to the streets bounding the site of interest, once the general location within the region is identified. After the site is found, a left click of the mouse brings a pop-up with the site coordinates. The user can click on the box, "Use this point" or exit by clicking on the "x" in the upper right corner of the pop-up and search again.

If instead the user enters the latitude and longitude, the longitude must be a negative number. If the user only knows the site address, then the corresponding latitude and longitude can be obtained using the ASCE Lookup Tool (https://asce7hazardtool.online/)

### 2.2 Site Geotechnical Classification.

Three options are provided: Site Class, Vs30 (m/s), or Unknown (Vs30 estimated from Wills et al., 2015). Clicking on the circle to the left enables the option.

**2.2.1 Site Class.** The drop-down menu of site classes appears by clicking on the Select box. The nomenclature following the site class letter designation is identical to that in the ASCE lookup tool.

**2.2.2 Vs30 (m/s).** This parameter is the average shear-wave velocity in the upper 30 meters at the site (See Chapter 20 of ASCE 7-16 for equation to compute the value). Enter the number in the Value box.

**2.2.3. Unknown (Vs30 estimated from Wills et al., 2015).** This option is used when the user does not yet know the site class or Vs30 value, but wants a preliminary estimate of the  $MCE_R$  response spectrum for the site. In this case the tool selects a Vs30 value based on the method in Wills et al. (2015). See citation for Wills et al. in the References section of Crouse et al. (2018) (https://www.scec.org/publication/8024).

After the appropriate site classification option is selected, click on the "Compute Response Spectra" box at the bottom of the page to view the output page.

### 3.0 Description of Outputs.

The output page opens to a one-page Summary. Below the page header to the left of the map appears the row "Summary Detailed Download all". The last two are links to additional information. All three are described below.

### 3.1 Summary.

The Input Parameters (site coordinates & classification) specified by the user are displayed under "Summary". If the Unknown site classification option was selected, the value of Vs30 used by the tool is displayed under "Values used in Computation".

The MCE<sub>R</sub> and Design Earthquake (=2/3 MCE<sub>R</sub>) response spectral parameters (S<sub>MS</sub>, S<sub>M1</sub>, S<sub>DS</sub>, S<sub>D1</sub>) and the MCE<sub>G</sub> parameter (PGA<sub>M</sub>) returned by the tool are listed under Computed Results. The site-specific MCE<sub>R</sub> response spectrum is listed and plotted under MCE<sub>R</sub> Response Spectrum.

The user must check these results against the 80% minimum requirement in the **Important Note** at the top of this User Guide. The web link to the ASCE web tool (https://asce7hazardtool.online/ (https://asce7hazardtool.online/)) at the bottom of the page can be used to extract the response spectra derived from Chapter 11 of ASCE 7-16 that is required for this check.

### 3.2 Detailed.

The Detailed output page provides values of parameters (Vs30 and basin depth terms, Z1.0 & Z2.5) the tool used to obtain the  $MCE_R$  response spectrum. [Note: Z1.0 & Z2.5 are the depths beneath the site to the tops of the layers with shear-wave velocities of 1.0 km/s and 2.5 km/s, respectively.]

The left hand plot under  $MCE_R$  Response Spectrum provides the site-specific  $MCE_R$  and Design Earthquake response spectra. The right hand plot provides the same  $MCE_R$  response spectrum and the  $MCE_R$  response spectra obtained from the ground-motion prediction equations (GMPE) and the 3-D numerical simulations (CyberShake). See Crouse et al. (2018) (https://www.scec.org/publication/8024) for details on the derivation of the  $MCE_R$  response spectrum from these GMPE-based and CyberShake-based  $MCE_R$  response spectra. The table below the plots provides the spectral acceleration values for the three curves in the right hand plot.

### 3.3 Download all.

Clicking on this link gives the user the option to download a ZIP file containing the Summary and Detailed output pages in PDF format, and an Excel CSV (comma separated values) file with the tabular  $MCE_R$  and Design response spectral data.

# Appendix E

Liquefaction and Settlement Analyses

# **APPENDIX E: LIQUEFACTION AND SETTLEMENT ANALYSIS**

The subsurface data obtained from the borings BH-1 was used to evaluate the liquefaction potential and associated dry seismic settlement when subjected to ground shaking during earthquakes.

A simplified liquefaction hazard analysis was performed using the program SPTLIQ (InfraGEO Software, 2019) using the liquefaction triggering analysis method by Boulanger and Idriss (2014). A modal earthquake magnitude of M 7.31 was selected based on the results of seismic deaggregation analysis using the USGS interactive online tool (https://earthquake.usgs.gov/hazards/interactive/).

A peak ground acceleration (PGA<sub>GM</sub>) of 0.897 g for the MCE design event, where g is the acceleration due to gravity, was selected for this analysis. The result of our analysis is presented on Plate No. C-1 and summarized in the following table.

	. <b></b> 1, <b>-</b> 3timate	a Dynamic Oction				
Location	Groundwater	Groundwater Depth	Dry Seismic	Liquefaction Induced		
Location	Conditions	(feet bgs)	Settlement (inches)	Settlement (inches)		
BH-11	Current	> 50	0.25	0.00		
DП-11	Historical ~ 40		0.25	0.00		

### Table No. E-1, Estimated Dynamic Settlements

Based on our analysis, the proposed project site has the potential for dry seismic settlement of up to 0.25 inches. Liquefaction induced settlement is negligible. Therefore, the proposed site has potential for up to 0.25 inches of seismically induced settlement. The differential settlement resulting from dynamic loads is anticipated to be 0.13 inches or less over a horizontal distance of 30 feet.

# LEGAL DESCRIPTION

REAL PROPERTY IN THE CITY OF SANTA MONICA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS: PARCEL 1:

LOT 3 IN BLOCK 42 OF EAST SANTA MONICA, IN THE CITY OF SANTA MONICA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 ET SEQ., OF MISCELLANEOUS RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY. PARCEL 2:

LOTS 4, 5 AND 6 IN BLOCK 42 OF EAST SANTA MONICA, IN THE CITY OF SANTA MONICA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 OF MISCELLANEOUS RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY. PARCEL 3:

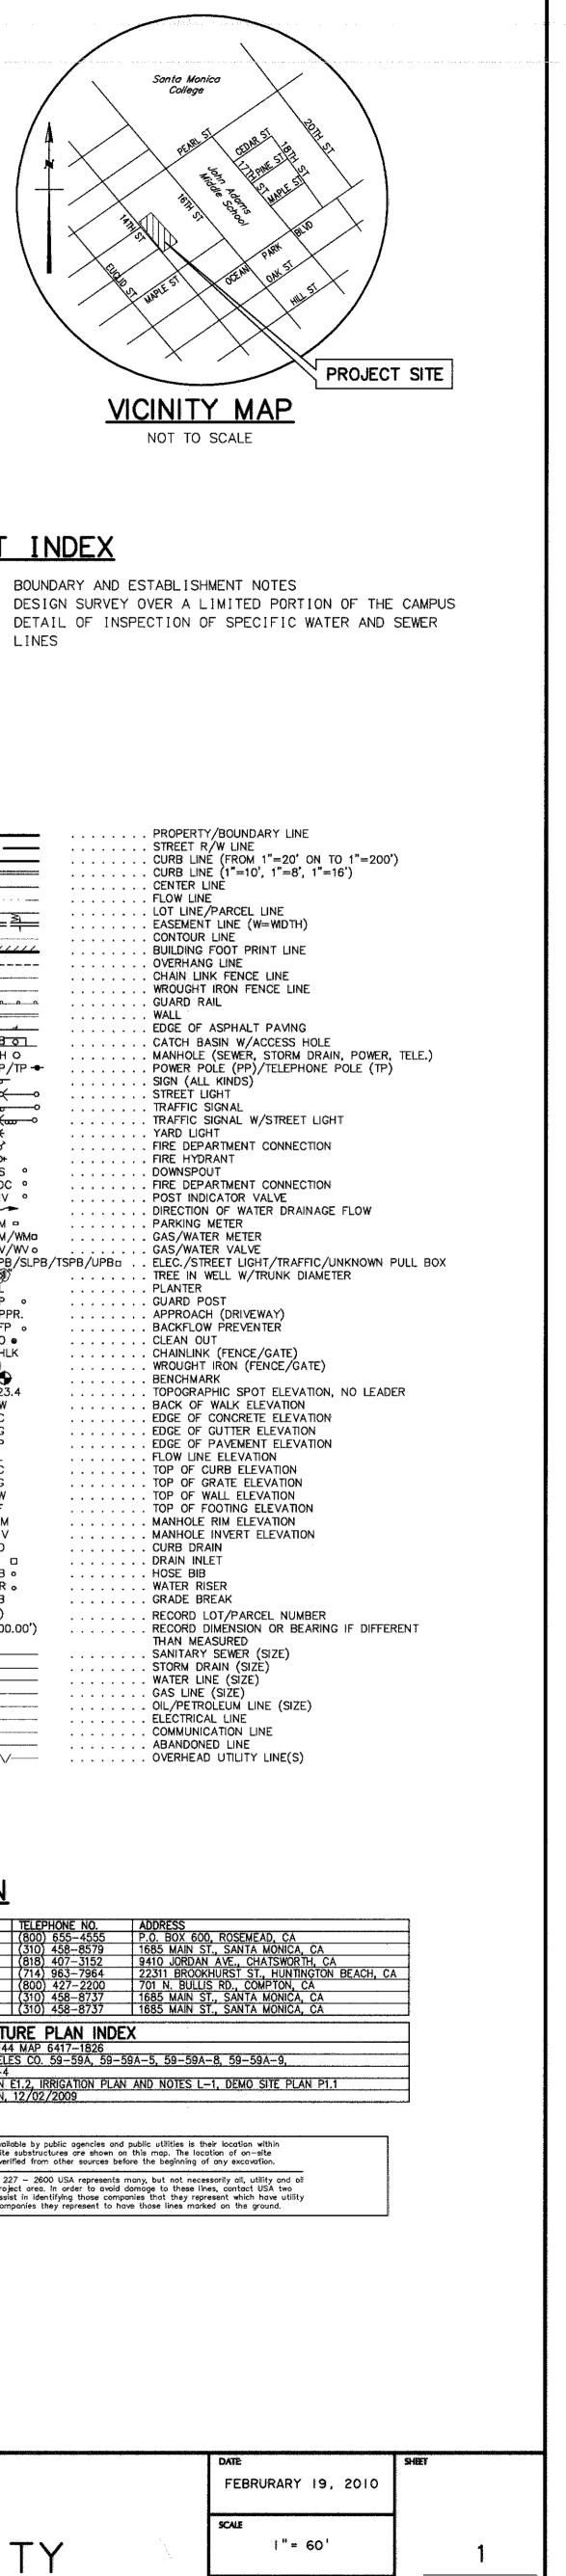

LOTS 7 AND 8 IN BLOCK 42 OF EAST SANTA MONICA, IN THE CITY OF SANTA MONICA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY. PARCEL 4:

LOT 9 IN BLOCK 42 OF EAST SANTA MONICA TRACT, IN THE CITY OF SANTA MONICA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 OF MISCELLANEOUS RECORDS OF SAID COUNTY. PARCEL 5:

THE SOUTHEAST 45 FEET, FRONT AND REAR OF LOT 10 IN BLOCK (45) OF EAST SANTA MONICA, IN THE CITY OF SANTA MONICA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 OF MISCELLANEOUS RECORDS OF SAID COUNTY. PARCEL 6:

LOT 10 EXCEPT THE SOUTHEASTERLY 45 FEET FRONT AND REAR, AND THE SOUTHEASTERLY (30) FEET, FRONT AND REAR OF LOT 11 IN BLOCK (43) OF EAST SANTA MONICA, IN THE CITY OF SANTA MONICA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 17 PAGE 95 OF MISCELLANEOUS RECORDS OF SAID COUNTY.

\*ERRORS IN PRELIMINARY TITLE REPORT LEGAL DESCRIPTION.

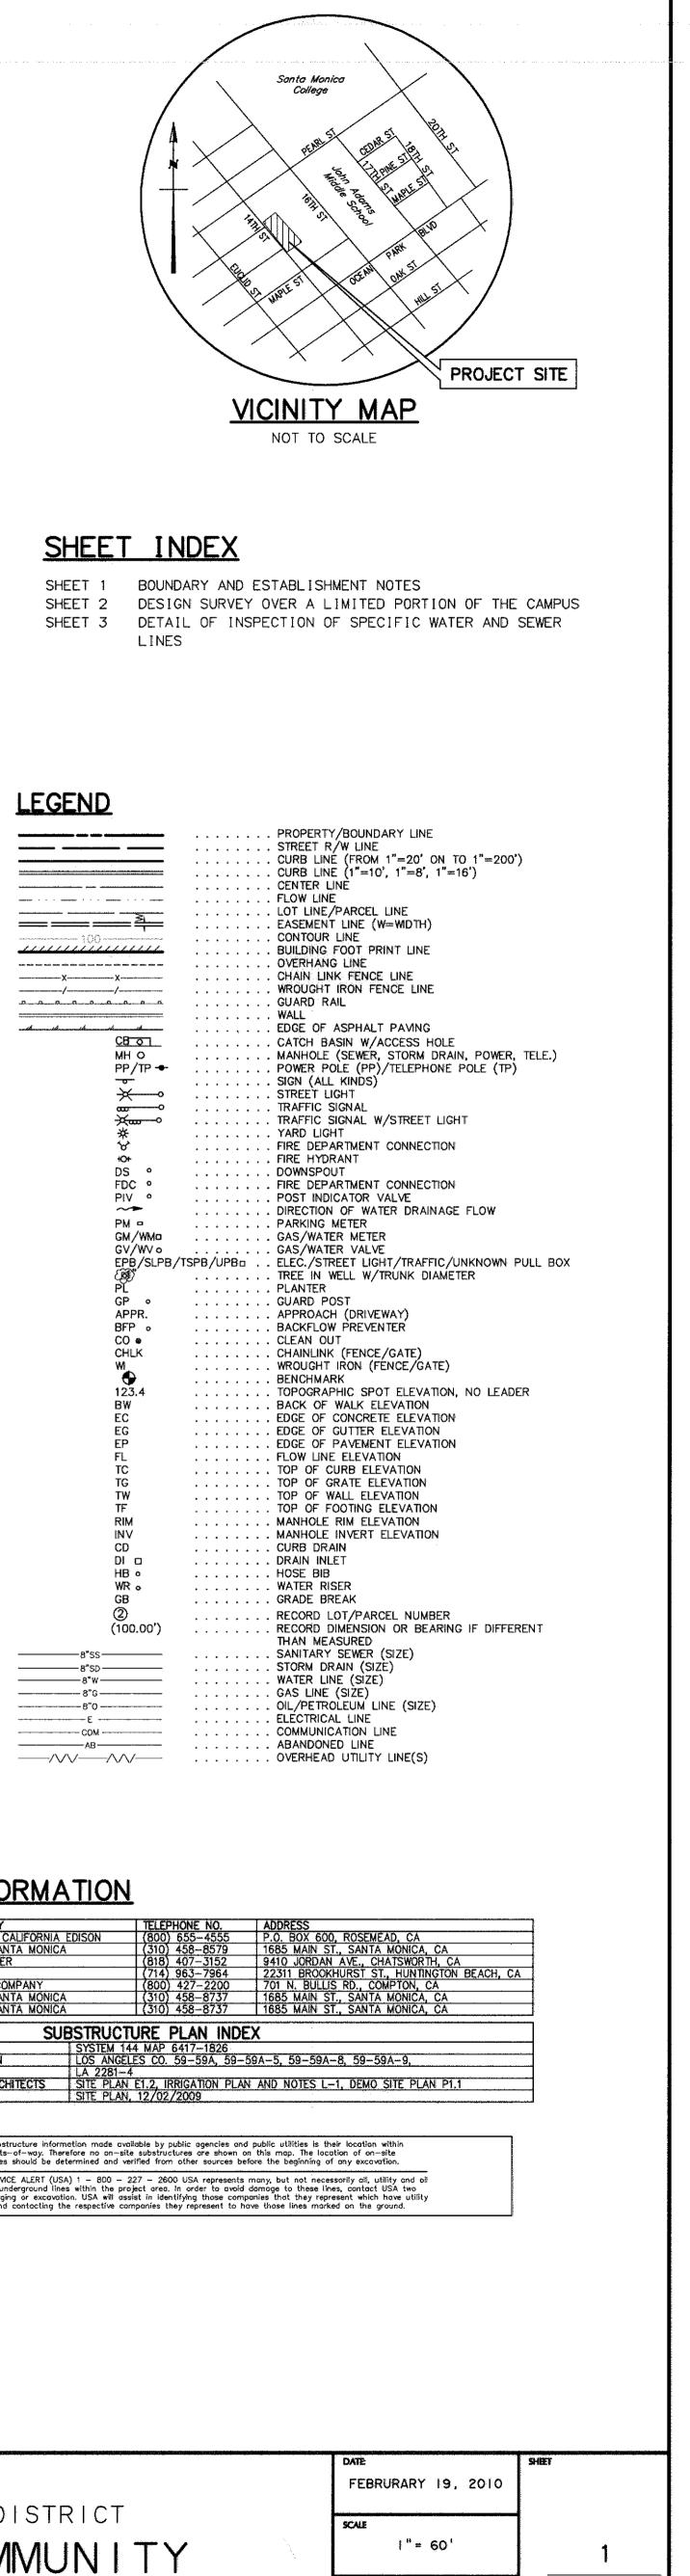

SHEET INDEX SHEET 2

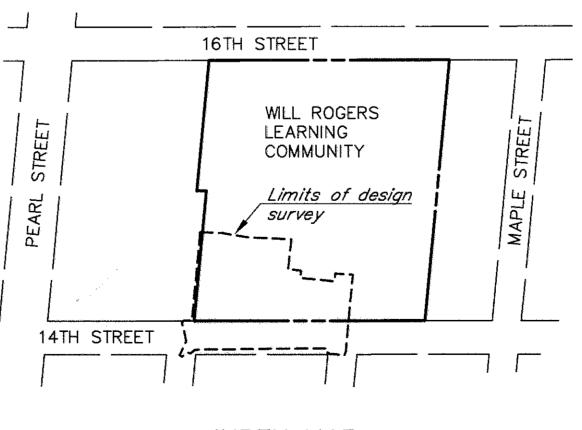

# SURVEYOR'S NOTES

- THIS SURVEY HAS BEEN PREPARED FOR DESIGN PURPOSES 1. BEFORE USING THIS MAP FOR DESIGN OR CONSTRUCTION PURPOSES, ALL
- EASEMENTS OF RECORD AND SETBACK LINES DEFINED IN COVENANTS, CONDITIONS AND RESTRICTIONS OF RECORD AFFECTING THIS PROPERTY SHOULD BE PLOTTED ON THIS MAP FROM A CURRENT TITLE REPORT. IF NO TITLE REPORT WAS FURNISHED, OUR CLIENT IS URGED TO FURNISH A CURRENT TITLE REPORT SO THAT THESE EASEMENT AND SETBACK LINES OF RECORD CAN BE PLOTTED ON THIS MAP.
- 2. THIS MAP SHOULD BE EXPANDED TO MEET ALTA REQUIREMENTS IF FINANCING IS TO BE OBTAINED FOR THE PROJECT, REQUIRING AN EXTENDED COVERAGE POLICY OF TITLE INSURANCE
- 3. THIS SURVEY DOES NOT INCLUDE EASEMENTS EXCEPT THOSE SPECIFICALLY DELINEATED HEREON.
- 4.IF UNDERGROUND PUBLIC UTILITIES AND OTHER SUBSTRUCTURES, ZONES, SET BACK AND STREET WIDENING DATA ARE SHOWN HEREON, IT IS FOR INFORMATION ONLY, HAVING BEEN OBTAINED FROM A GENERAL REQUEST AT THE LOCAL AGENCY'S PUBLIC COUNTER AND/OR OTHER SOURCES NOT CONNECTED WITH THIS COMPANY. NO REPRESENTATION IS MADE AS TO THE ACCURACY, CURRENCY OR COMPLETENESS OF SAID INFORMATION AND ANY USERS OF SAID INFORMATION IS URGED TO CONTACT THE UTILITY OR LOCAL AGENCY DIRECTLY.

# SURVEYOR'S NOTES

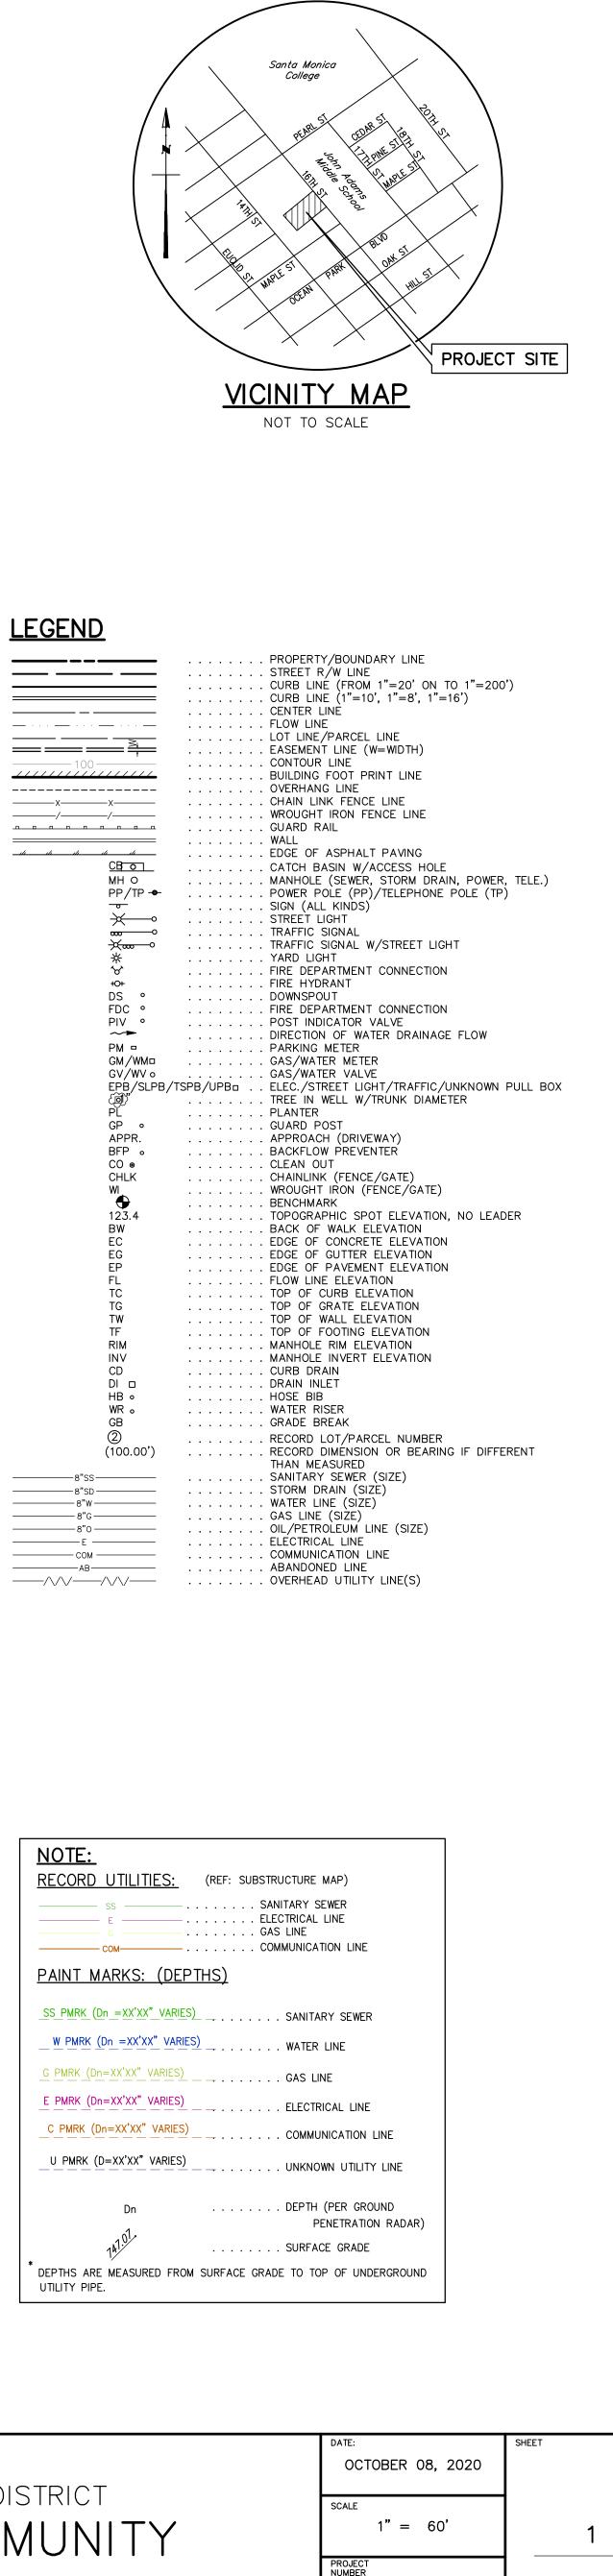

THIS SURVEY HAS BEEN PREPARED FOR DESIGN PURPOSES

- 1. BEFORE USING THIS MAP FOR DESIGN OR CONSTRUCTION PURPOSES, ALL EASEMENTS OF RECORD AND SETBACK LINES DEFINED IN COVENANTS, CONDITIONS AND RESTRICTIONS OF RECORD AFFECTING THIS PROPERTY SHOULD BE PLOTTED ON THIS MAP FROM A CURRENT TITLE REPORT. IF NO TITLE REPORT WAS FURNISHED, OUR CLIENT IS URGED TO FURNISH A CURRENT TITLE REPORT SO THAT THESE EASEMENT AND SETBACK LINES OF RECORD CAN BE PLOTTED ON THIS MAP.
- 2. THIS MAP SHOULD BE EXPANDED TO MEET ALTA REQUIREMENTS IF FINANCING IS TO BE OBTAINED FOR THE PROJECT, REQUIRING AN EXTENDED COVERAGE POLICY OF TITLE INSURANCE.
- 3. THIS SURVEY DOES NOT INCLUDE EASEMENTS EXCEPT THOSE SPECIFICALLY DELINEATED HEREON.
- 4. IF UNDERGROUND PUBLIC UTILITIES AND OTHER SUBSTRUCTURES, ZONES, SET BACK AND STREET WIDENING DATA ARE SHOWN HEREON, IT IS FOR INFORMATION ONLY, HAVING BEEN OBTAINED FROM A GENERAL REQUEST AT THE LOCAL AGENCY'S PUBLIC COUNTER AND/OR OTHER SOURCES NOT CONNECTED WITH THIS COMPANY. NO REPRESENTATION IS MADE AS TO THE ACCURACY, CURRENCY OR COMPLETENESS OF SAID INFORMATION AND ANY USERS OF SAID INFORMATION IS URGED TO CONTACT THE UTILITY OR LOCAL AGENCY DIRECTLY.
