Subject: Results of Screening Level Soil Sampling, Former Building E Location,
Santa Monica Malibu Unified School District, Malibu Middle and High
School, 30215 Morning View Dr., Malibu, California 90265

Introduction

Leighton Consulting, Inc. (Leighton) provides this report to the Santa Monica-Malibu Unified School District (the District or SMMUSD) summarizing analytical results for soil samples collected at the former location of Building E at the Malibu Middle and High School (the Site) located at 30215 Morning View Dr., Malibu, California 90265 (Figure 1). The approximate project boundary and soil sample locations is shown in Figure 2.

Background

Numerous reports by others have documented the presence, and remediation/encapsulation of polychlorinated biphenyls (PCBs) in building materials in many of the school buildings at the Site constructed in the 1960's. In preparation of the sampling activities Leighton reviewed the information provided in the project Memorandum prepared by ENVIRON International Corporation (ENVIRON) dated September 23, 2014 entitled: "Final Summary of Soil, Soil Vapor, and Groundwater Sampling Results Malibu High School, 30125 Morning View Drive, Malibu California. The Environ Memorandum presents all validated, soil, soil vapor, and groundwater analytical data collected from Malibu Middle High School (MMHS). The samples were analyzed for a variety of compounds in accordance with the Department of Toxic Substances Control (DTSC) approved Preliminary Environmental Assessment (PEA) Work Plan. Based on the analytical results of the DTSC approved PEA which was

conducted prior to the demolition of Building E, ENVIRON concluded that “Based on the reviewed results, no significant issues of concern were identified in soil, soil vapor, and groundwater samples collected at MMHS.” The Memorandum further states that “96% of the soil samples (all but five samples) tested for PCBs were either non-detect or were present at concentrations less than applicable USEPA and or DTSC modified residential RSLs”.

During the soil sampling described herein, representative soil samples were collected from within the approximate footprint of the location of the former Building E in order to assess whether or not PCB's were present to confirm post demolition conditions and to prepare for redevelopment.

Health & Safety Plan

A Site-specific health and safety plan (HASP) was prepared for the field activities. The HASP addressed issues regarding chemical exposure, personal protective equipment (PPE), physical and biological hazards that might be expected at the Site, an emergency response plan, and route to the nearest hospital. Site personnel engaged in field activities were required to read and sign the HASP.

Sampling and Analysis Activities

A total of fourteen (14) sample locations were selected by the Leighton project geologist. Sampling was conducted using a hand auger to collect samples from approximately 0.5, 2.5 and 5.0 feet below ground surface (bgs) for sample locations BE-1 through BE-8. Sample locations BE-9 through BE-14 encountered shallow bedrock materials and practical refusal at approximately 3.5 feet bgs and samples were obtained from 0.5 and 2.5 feet bgs at these locations. For sample locations BE-1 through BE-8 only the 0.5 and 2.5 feet bgs samples were initially analyzed for the presence of PCBs and the 5.0 feet bgs samples were placed on laboratory hold pending the results of the shallower samples. For samples BE-9 through BE-14 both the 0.2 and the 2.5 feet bgs sample depths were analyzed for the presence of PCBs.

Samples were stored in 8-ounce laboratory-supplied glass jars, appropriately labelled, placed in an iced cooler, and transported to Test America, Inc. in Costa Mesa, California under standard chain-of-custody protocol. Soil samples were analyzed for PCBs by EPA Method 8082 - Polychlorinated Biphenyls (PCBs) by Gas Chromatography.

Equipment Decontamination

Any equipment that came into contact with potentially contaminated soil or water was decontaminated consistently to assure the quality of samples collected. Disposable equipment intended for one time use was not decontaminated, but was packaged for appropriate disposal. Decontamination occurred prior to and after each use of a reusable piece of equipment. The sampling devices used (e.g., hand auger) were decontaminated using the following procedures:

- Non-phosphate detergent and tap water scrub, using a brush if necessary;
- Tap water rinse; and
- Final deionized/distilled water rinse.

The soil borings were backfilled with hydrated bentonite clay followed by native material as applicable.

Sample Custody

An entry was made on a chain-of-custody form supplied by the laboratory for each sample that was submitted to the laboratory for analysis. The information recorded included the sampling date and time, sample identification number, matrix type, requested analyses and methods, preservatives, and the sampler's name. Sampling team members maintained custody of the samples until they were relinquished to laboratory personnel or professional courier service. The cooler was appropriately sealed before it was relinquished to laboratory personnel. The chain-of-custody form accompanied the samples from the time of collection until received by the laboratory. Each party in possession of the samples signed the chain-of-custody form signifying receipt.

Collected soil samples were transported using standard chain-of-custody protocol to Test America Laboratories in Costa Mesa, California, an analytical testing laboratory accredited by the California Department of Public Health (CDPH). Upon receipt, the laboratory inspected the condition of the sample containers and reported the information on chain-of-custody or similar form.

A copy of the original completed chain-of-custody form was provided by the laboratory along with the report of results. Appendix A contains a copy of the laboratory analytical report.

Investigation Derived Waste Management

In the process of collecting the soil samples for laboratory analysis, different types of potentially contaminated Investigation Derived Waste (IDW) were generated that included used PPE, disposable sampling equipment, excess soil cuttings, and decontamination fluids.

Listed below are the procedures that were followed for handling the IDW:

- Used PPE and disposable equipment were double bagged and placed in a municipal refuse dumpster. These wastes are not considered hazardous and could be sent to a municipal landfill.
- Remaining soil cuttings (not used as backfill) and decontamination wastewater were placed in a US Department of Transportation (DOT)-approved 55-gallon drum. The drum was labeled and sealed, pending receipt of analytical results, waste profiling and off-Site disposal.

A single 55-gallon drum containing IDW was generated during the sampling. This drum contained excess soil cuttings from the hand-auger borings and very limited liquid from the decontamination activities. The drum is currently being stored at the site pending additional sampling from buildings A, B, & C. At the completion of sampling activities, a grab sample(s) will be collected directly from the drum(s) containing IDW. IDW samples will be analyzed for the following compounds for waste profiling, manifesting and offsite disposal:

- California Code of Regulations (CCR) Title 22 Code of Administrative Manual (CAM) 17 metals (CAM 17 metals) by EPA Method 6010B/7471A,
- Organochlorine Pesticides (OCPs) by EPA Method 8081A, and
- Gasoline Range Organics (GRO), Diesel Range Organics (DRO) and Oil Range Organics (ORO) by EPA Method 8015B.

Analytical Results

Laboratory results for all soil samples collected from the footprint of the former Building E at the Malibu Middle and High School Site indicated PCBs were not detected at concentrations above the method detection limits.

If you have questions and/or comments regarding this report, please contact the undersigned at our Irvine office at (949) 250-1421.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Receipt

The samples were received on 8/17/2017 5:33 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 16.8° C.

Receipt Exceptions

The following samples was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): EB1S (440-190515-35) and EB2B (440-190515-36).

The following samples was received at the laboratory outside the required temperature criteria: BE-1-0.5 (440-190515-1), BE-1-2.5 (440-190515-2), BE-1-5.0 (440-190515-3), BE-5-0.5 (440-190515-4), BE-5-2.5 (440-190515-5), BE-5-5.0 (440-190515-6), BE-2-0.5 (440-190515-7), BE-2-2.5 (440-190515-8), BE-2-5.0 (440-190515-9), BE-3-0.5 (440-190515-10), BE-3-2.5 (440-190515-11), BE-3-5.0 (440-190515-12), BE-8-0.5 (440-190515-13), BE-8-2.5 (440-190515-14), BE-4-0.5 (440-190515-15), BE-4D-0.5 (440-190515-16), BE-4-2.5 (440-190515-17), BE-4D-2.5 (440-190515-18), BE-6-0.5 (440-190515-19), BE-6-2.5 (440-190515-20), BE-7-0.5 (440-190515-21), BE-7-2.5 (440-190515-22), BE-9-0.5 (440-190515-23), BE-9-2.5 (440-190515-24), BE-10-0.5 (440-190515-25), BE-10-2.5 (440-190515-26), BE-11-0.5 (440-190515-27), BE-112.5 (440-190515-28), BE-13-0.05 (440-190515-29), BE-13-2.5 (440-190515-30), BE-12-0.5 (440-190515-31), BE-12-2.5 (440-190515-32), BE-14-0.5 (440-190515-33), BE-14-2.5 (440-190515-34), EB1S (440-190515-35) and EB2B (440-190515-36). The sample(s) is considered acceptable since it was collected and submitted to the laboratory on the same day and there is evidence that the chilling process has begun. Samples were received at 16.5/16.5 deg C on ice.

GC Semi VOA

Method(s) 8082: Surrogate recovery for the following samples was outside control limits: BE-2-2.5 (440-190515-8). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8082, 8082A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-424443 and analytical batch 440-424450. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch: (LCS 440-424443/4-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3546: The following samples was diluted due to the nature of the sample matrix: Dark moist BE-5-0.5 (440-190515-4), BE-5-2.5 (440-190515-5) and BE-6-2.5 (440-190515-20). Elevated reporting limits (RLs) are provided.8082

Method(s) 3546: The following samples was diluted due to the nature of the sample matrix: Clay samples BE-9-2.5 (440-190515-24), BE-10-2.5 (440-190515-26), BE-11-0.5 (440-190515-27), BE-112.5 (440-190515-28), BE-13-0.05 (440-190515-29) and BE-13-2.5 (440-190515-30). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TestAmerica Job ID: 440-190515-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

Glossary

Abbreviation **These commonly used abbreviations may or may not be present in this report.**

<input checked="" type="checkbox"/>	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Source: TestAmerica Irvine

List Number: 1

Creator: Skinner, Alma D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	Received same day of collection; chilling process has begun.
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
