EXECUTIVE SUMMARY

On November 21, 22, and 23 2016, and January 19, 25, and 26, 2017, Alta Environmental conducted PCB delineation sampling for the door and window replacement project in buildings A, B, C, E, F, G, and H at Webster Elementary School located at 3602 Winter Canyon Road, Malibu, California 90265 (Site).

The objective of this sampling was to determine if PCBs associated with PCB Bulk Product Waste may have migrated to adjacent porous surfaces beyond 1″ and 3″ away from the possibly impacted windows and doors casings (Components) slated to be remove and replaced.

The Reporting Limit (RL) used by the laboratory for this project was below the benchmark (1 ppm) currently being used as approved by the USEPA.

A total of 62 samples were analyzed representative of the surrounding porous surfaces. The sampling started at 1 inch (1″) and extended to intervals of 3 inches (3″) and 6 inches (6″) away from the Components from a surface depth of 0-.5″. As per the Districts request, initially, only 1″ samples were analyzed, with the intent of analyzing the associated 3″ and 6″ samples only if the 1″ samples reported levels of PCBs greater than 1ppm.

One sample collected at the 1″ interval was reported to contain 1.76 parts per million (ppm) PCBs (1.45 ppm Aroclor 1242 and 0.309 ppm Aroclor 1248). The 3″ sample collected from this location was subsequently analyzed and reported by the laboratory to contain 0.185 ppm PCBs (Aroclor 1248). In order to further characterized the migration of PCBs, Alta conducted more sampling (January 19, 25 and 26, 2017) representative of the groups of buildings similar to building F. All additional samples collected on January 19, 25, and 26, 2016 were reported as “Not Detected” above the RL.

During the delineation sampling, both caulking and glazing was observed around the window and door casings. The caulking and glazing was not sampled at the District request but was assumed to be PCB Bulk Product Waste. Additionally, the porous materials 0 to 3 inch (0-3″) installed around the possibly impacted doors and windows casings are assumed to be PCB Remediation Waste.

Removal of PCB Bulk Product Waste and PCB Remediation Waste should be conducted using proper engineering controls including but not limited to containment, worker training, worker protection etc. PCB waste should be characterized, packaged, labeled and disposed as required by TSCA 40 CFR 761 and California hazardous waste regulation set forth in Title 22, Division 4.5 of the California Code of Regulations unless testing is performed prior to demolition and analytical results confirms that PCBs are less than 50 ppm in the window and door caulking and window glazing.

Summary of Findings:

1. All window and door caulking and window glazing are assumed to be PCB Bulk Product Waste, all buildings,
2. All porous materials installed around the window and door casings, approximately 0-1″ are assumed to be PCB Remediation Waste, buildings A, G, and H. Porous materials installed beyond 1″ were reported as non-detected by the laboratory during the delineation sampling completed during this project-therefore, not interpreted to require removal and disposal as PCB waste at this time.
3. All porous materials installed around the window and door casings, approximately 0-3″ are assumed to be PCB Remediation Waste, buildings B, C, D, E, and F. Porous materials installed beyond 3″ were reported as non-detected by the laboratory during the delineation sampling completed during this project-therefore, not interpreted to require removal and disposal as PCB waste at this time.

REF: PCBs Delineation Sampling
Buildings A, B, C, D, E, F, G, and H
Webster Elementary School
3602 Winter Canyon Road
Malibu, California 90265

1 INTRODUCTION

On November 21, 22, and 23, 2016, and January 19, 25, and 26, 2017, Alta Environmental conducted PCB delineation sampling for the door and window replacement project in buildings A, B, C, E, F, G, and H at Webster Elementary School located at 3602 Winter Canyon Road, Malibu, California 90265 (Site).

The sampling was completed by Fabian Ruvalcaba, and Therese Rizarri, both Cal/OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) trained technicians, and assistant field technician, Oscar Garcia.

2 SCOPE OF WORK

The Santa Monica-Malibu Unified School District (District) retained Alta Environmental (Alta) for the sampling (approved proposal dated, November 10, 2016, and January 19, 2017).

The PCBs delineation sampling was completed around doors and window casings slated for removal and replacement in buildings A, B, C, D, E, F, G, and H in areas identified in project drawings prepared by dsk architects, dated November 15, 2016.

Alta delineation sampling was completed as follows:

1. A one inch sized diameter drill bit was used in conjunction with a rotary impact hammer to collect samples from stucco, and wall plaster surfaces.
2. A polyethylene drop-sheet will be placed below the sampling area to capture any dust which may be dislodged during the sample collection.
3. Samples were placed inside an appropriate glass jar with a Teflon lined cap.
4. Samples were labelled, packaged, and documented on a Chain of Custody for shipping to the laboratory.
5. Samples were shipped to the laboratory in a chilled ice chest.
6. Sampled areas were patched using a non-PCBs sealant. The patch area is temporary, intended only to provide a barrier to the exposed sampled substrates.
7. Each sample location was documented using digital photographs.
8. Equipment and tools were decontaminated using a two-step decontamination process. First, all used drill bits, and tools were cleaned using scrub brushes and detergent with de-ionized water base solution. Second, each piece was rinsed using de-ionized water. After the two step decontamination procedures, the equipment was placed on top of clean paper towels (or equivalent material) and were set to dry individually. Each piece of equipment was inspected by Alta for evidence of residual dust and debris.

The sampling was conducted in accordance with the approved proposal, a site-specific work plan prepared for this project (Alta Work Plan, dated November 15, 2016), which was reviewed and approved by the District and "USEPA Region I Standard Operation Procedures for Sampling Porous Surfaces for Polychlorinated Biphenyl," approved for use by the District, May, 23, 2011. A predetermined number of doors and windows, and sample locations were selected as part of the approved work plan. The doors and windows and sample locations were based on similarity of each component and building construction date. At least ten percent (10%) of each similar component was randomly sampled in each building of similar construction. Below, in Table 1 is summary of the sampled components.

Table 1
Summary of Window Types and Associated Substrates

Component Type ID	Component Description	Visible Caulking Yes/No	Building	Location	Exterior Substrate	Interior Substrate
A	Full wall metal window	Yes	D	All sides	Stucco	Wood
B	New aluminium window	Yes	D	North side	Stucco	Drywall
C	4'X8″ half wall metal windows (restrooms, storages, work rooms etc.)	Yes	A, B, C, D, E, F	All sides	Stucco	Drywall, plaster wood, concrete
		Yes	G, and H	All sides		
D	Full wall (floor to roof) metal window	Yes	G, H	East sides	Stucco	Plaster
E	Full wall new aluminium window	Yes	G	South side	Stucco	Plaster
F	Full wall metal window on concrete saddle wall	Yes	E, F	East	Stucco and concrete	Plaster and concrete
G	Full wall, all metal window (floor to roof)	Yes	B, C	East	Stucco	Drywall, wood
H	Doors embedded in full wall metal windows (type F)	Yes	E, F	East	Concrete	Concrete, plaster
I	Full wall metal windows	Yes	A	East	Stucco	Wood

Component Type ID	Component Description	Visible Caulking Yes/No	Building	Location	Exterior Substrate	Interior Substrate
J	Full wall metal back windows (thru covered walkways)	Yes	E, F	Backside classrooms	Concrete and stucco	Plaster and concrete
K	Single exterior door	Yes	B, C, D, E, F	Restrooms, heater rooms, work rooms, back side classrooms	Stucco all sides	Interior drywall, concrete, wood, plaster

3 METHODOLOGY

A total of 62 samples were analyzed representative of the surrounding porous surfaces. The sampling started at 1 inch (1″) and extended to intervals of 3 inches (3″) and 6 inches (6″) away from the Components from a surface depth of 0-.5″. As per the Districts request, initially, only 1″ samples were analyzed, with the intent of analyzing the associated 3″ and 6″ samples only if the 1″ samples reported levels of PCBs greater than 1ppm.

The bulk samples were placed in an appropriate glass jar with a Teflon cap. Samples were labeled and packaged in a cooler and kept cool with ice during shipment.

Samples including QA/QC field duplicate samples were analyzed by Enviro-Chem, located at 1214 East Lexington Avenue, Pomona, California, a Cal ELAP accredited laboratory (#1555)

Split QA/QC samples were analyzed by and EMSL Laboratory (EMSL), located in Cinnaminson, NJ 08077, a Cal ELAP (#1877) and RDL/NELAC nationally accredited (#03036).

4 RESULTS

Table 2.0
Summary of Sample Results

Component (from Table 1 above)	Building	Reported Construction Date	Number of Components Tested	Total Potentially Impacted Components to be renovated	Total Samples Analyzed	Results
A	D	1948	1	5	2	Not Detected
B	D	1948	1	1	2	Not Detected
C	B, C, D, E, F	1948	5	9	13	Not Detected
C	G, H	1952	1	7	2	Not Detected
C	A	1961	1	4	2	Not Detected

Component (from Table 1 above)	Building	Reported Construction Date	Number of Components Tested	Total Potentially Impacted Components to be renovated	Total Samples Analyzed	Results
D	H	1952	1	4	2	Not Detected
E	G	1952	1	1	2	Not Detected
F	E, F	1948	2	9	7	Not Detected
G	B, C	1948	3	7	7	Not Detected
H	B, C, D, E, F	1948	1	7	2	Not Detected
I	A	1961	1	4	2	Not Detected
J	**B, C, D, E, F**	**1948**	**3**	**14**	**1**	**1.76 ppm (1.45 ppm Aroclor 1242 and 0.309 ppm Aroclor 1248, at 1″ interval)**
					8	Not Detected (1″ interval)
					1	0.185 ppm (Aroclor 1248 at 3″ interval)
					1	Not Detected (6″ interval)
K	B, C, D, E, F	1948	4	26	8	Not Detected

All samples were analyzed in accordance with EPA Method 3540C/8082A for PCBs.

The Reporting Limit (RL) used by the laboratory for this project was below the benchmark (1 ppm) currently being used as approved by the USEPA. One sample collected at the 1″ interval was reported to contain 1.76 parts per million (ppm) PCBs (1.45 ppm Aroclor 1242 and 0.309 ppm Aroclor 1248). The 3″ sample collected from this location was subsequently analyzed and reported by the laboratory to contain 0.185 ppm PCBs (Aroclor 1248), and the 6″ samples were reported as not detected at above the RL. All other samples were reported as not detected at the laboratory RL.

Refer to Appendix A in this report for a summary of samples collected and relevant sample information.

Refer to Appendix B for laboratory reports and relevant sample analysis information.

5 QUALITY CONTROL

Nine field duplicate samples were collected side by side from the 1″ interval. Field duplicate samples were reported with consistent results.

Three split duplicate samples were collected from two separate locations representative of the 1″ interval. The samples were homogenized, and split in to two identical samples. The split samples were then submitted and analyzed by both Enviro-Chem, and EMSL laboratories. Both laboratories reported consistent results as not-detected at above the RL.

EMSL reported "The samples were received in good condition. The QC data associated with the samples results meets the recovery and precision requirement established by NELAP." Similarly, Enviro-Chem reported, "all samples were received intact, and accompanying chain of custody."

Enviro-Chem reported results with heavy matrix interference (sample number, 161121-22 (I-1-11P), 170120-56 (25-119), and 170120-59 (28-119). The matrix interference is likely related to paint or other surface coatings/materials, such as primers, paints which impacted the sample analysis. The laboratory reported results as non-detected for PCBs, however, at a higher reporting limit than the action level of 1 ppm. Additional sampling may be necessary to substantiate these results.

Based on review of the QC data associated with the sample analysis, the recovery and precision is within the acceptable limits of the laboratory.

6 CONCLUSIONS

The PCB delineation sampling was completed around doors and window casings scheduled for removal and replacement in buildings A, B, C, D, E, F, G, and H in areas identified in project drawings prepared by dsk architects, dated November 15, 2016.

The objective of this sampling was to determine if PCBs may have migrated to adjacent porous surfaces beyond 1″, and 3″ away from the possibly impacted windows and doors casings (Components) slated to be remove and replaced.

During the delineation sampling, both caulking and glazing was observed around the window and door casings. The caulking and glazing was not sampled at the District request but was assumed to be PCB Bulk Product Waste. Additionally, the porous materials 0 to 3 inch (0-3″) installed around the possibly impacted doors and windows casings are assumed to be PCB Remediation Waste.

Summary of Findings:

1. All window and door caulking and window glazing are assumed to be PCB Bulk Product Waste, all buildings.
2. All porous materials installed around the window and door casings, approximately 0-1″ are assumed to be PCB Remediation Waste, buildings A, G, and H. Porous materials installed beyond 1″ were reported as non-detected by the laboratory during the delineation sampling completed during this project-therefore, not interpreted to require removal and disposal as PCB waste at this time.
3. All porous materials installed around the window and door casings, approximately 0-3″ are assumed to be PCB Remediation Waste, buildings B, C, D, E, and F. Porous materials installed beyond 3″ were reported as non-detected by the laboratory during the delineation sampling completed during this project-therefore, not interpreted to require removal and disposal as PCB waste at this time.

7 RECOMMENDATIONS

Removal of PCB Bulk Product Waste and PCB Remediation Waste should be conducted using proper engineering controls including but not limited to containment, worker training, worker protection etc. PCB waste should be characterized, packaged, labeled and disposed as required by TSCA 40 CFR 761 and

California hazardous waste regulation set forth in Title 22, Division 4.5 of the California Code of Regulations unless testing is performed prior to demolition and analytical results confirms that PCBs are less than 50 ppm in the window and door caulking and window glazing.

A site-specific removal work plan should be prepared, reviewed and approved by the District prior to the start of any removal action.

8 ASSUMPTIONS AND LIMITATIONS

It is understood that the data contained in this report is to be used for planning and budgeting purposes related to a scheduled door and window replacement project. Additional sampling may be required to further characterized the site, waste disposal characterization, and area clearance following the removal of the impacted doors.

This report was prepared exclusively for use by Santa Monica-Malibu Unified School District, and may not be relied upon by any other person or entity without Alta Environmental's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. Alta Environmental cannot be responsible for the impact of any changes in environmental standards, practices or regulations after performance of services.

In performing our professional services, we have applied present engineering and scientific judgment and used a level of effort consistent with the current standard of practice for similar types of studies.

As applicable, Alta Environmental has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, Alta Environmental accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Alta Environmental will not accept any liability for loss, injury claim, or damage arising directly or indirectly from any use or reliance on this report. Alta Environmental makes no warranty, expressed or implied.

Summary of PCBs Deliniation Sampling

CLIENT: SMMUSD
PROJECT NO: SMSD-16-6514.1
PROJECT: Windows and Doors Removal Project at Webser ES-Additional Step-out Sampling
Date: January 19, 25, and 26 2017

QA/QC Samples

Building Name	Sample Number	Type of Window or Door	Sample Description	Sample Location	Photograph Number	Total PCBs (mg/kg)
Duplicate QA/QC Samples						
E	19-0119	H	Plaster	Duplicate of sample 18-0119 (1")	Photo Not Available	Not Detected
C	22-0125	G	Wood	Duplicate of sample 21-0125 (1")	Photo Not Available	Not Detected
D	34-0125	A	Wood	Duplicate of sample 34-0125 (1")	Photo Not Available	Not Detected
F	21-0126	C	Stucco	Duplicate of sample 20-2126 (1")	Photo Not Available	Not Detected
F	39-0126	J	Plaster	Duplicate of sample 38-0126 (1")	Photo Not Available	Not Detected
Split Duplicate QA/QC Samples						
F	28a-0126	H	Plaster	Split duplicate of 28b-0126 (Enviro-Chem Lab) (1")	Photo Not Available	Not Detected
F	28b-0126	H	Plaster	Split duplicate of 28a-0126 (EMSL Lab) (1")	Photo Not Available	Not Detected

Lab I.D.: **161121-10 through -43**

Dear Mr. Ruvalcaba:

The **analytical results** for the solid samples, received by our laboratory on November 21, 2016, are attached. The samples were received intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Dear Mr. Ruvalcaba:

The **additional PCB results** for the solid samples, received by our laboratory on November 22, 2016, are attached. The samples were received chilled, intact, accompanying chain of custody and also stored per the EPA protocols.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 11/23/2016. The results are tabulated on the attached data pages for the following client designated project:

Window and doors replacement project at Webster ES

The reference number for these samples is EMSL Order #011608011. Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact me at (856) 303-2500.

Approved By:

Phillip Worby, Chemistry Laboratory Manager

The test results contained within this report meet the requirements of NELAP and/or the specific certification program that is applicable, unless otherwise noted.

Project: **Webster ES Additional Step-Out**
Lab I.D.: **170120-33 through -62**

Dear Mr. Ruvalcaba:

The **analytical results** for the solid samples, received by our laboratory on January 20, 2017, are attached. The samples were received intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

COMMENTS
DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected Or Below the Actual Detection Limit
* = Sum of the PCB 1016, 1221, 1232, 1242, 1248, 1254 and 1260
^ = Actual detection limit raised due to matrix interference
*** = The concentration exceeds the TTLC Limit of 50, and the sample is defined as hazardous waste as per CCR TITLE 22 (if marked)

Dear Mr. Ruvalcaba:

The **analytical results** for the solid samples, received by our laboratory on January 20, 2017, are attached. The samples were received intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Project: **Webster Additional Step-Out Sampling**
Lab I.D.: **170127-91 through -129**

Dear Mr. Ruvalcaba:

The **analytical results** for the solid samples, received by our laboratory on January 27, 2017, are attached. The samples were received intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Andy Wang

COMMENTS
DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected Or Below the Actual Detection Limit
* = Sum of the PCB 1016, 1221, 1232, 1242, 1248, 1254 and 1260
^ = Actual detection limit raised due to matrix interference
*** = The concentration exceeds the TTLC Limit of 50, and the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 1/30/2017. The results are tabulated on the attached data pages for the following client designated project:

Window and Doors Replacement Project at Webster ES

The reference number for these samples is EMSL Order #011700785. Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact me at (856) 303-2500.

Approved By:

Phillip Worby, Chemistry Laboratory Manager

The test results contained within this report meet the requirements of NELAP and/or the specific certification program that is applicable, unless otherwise noted.
NELAP Certifications: NJ 03036, NY 10872, PA 68-00367, CA ELAP 187

G.05	EXISTING WINDOW TO REMAIN.
G.07	WOODEN TRIM TO REMAIN.
H.01	EXISTING CASEWORK TO REMAIN. PREPARE PREVIOUSLY PAINTED SURFACES TO RECEIVE NEW PAINT. SEE SPECS.
H.02	EXISTING CASEWORK TO REMAIN. PROTECT IN PLACE. DOES NOT REQUIRE PAINT.
P.03	EXISTING WALKWAY COVER TO REMAIN.

DEMOLITION GENERAL NOTES

1. ALL KEYNOTES ARE TYPICAL UNLESS OTHERWISE NOTED.

2. CONTRACTOR IS RESPONSIBLE TO PATCH AND REPAIR ALL WALLS, CEILINGS, AND FLOORING DAMAGED DURING DEMOLITION IN SCOPE OF WORK.

3. REMOVE WITHIN AREA OF WORK: EXISTING WINDOW FRAME, WOOD TRIM, AND GROUT. SEE DEMOLITION WINDOW DETAILS.

4. CONTRACTOR IS RESPONSIBLE TO REMOVE, REINSTALL, AND REWIRE ALL ELECTRICAL CONDUITS, OUTLETS, AND THERMOSTATS AS NEEDED TO PERFORM WINDOW DEMOLITION & NEW WINDOW INSTALLATION.

5. AT ALL EXISTING WINDOW ROUGH OPENINGS, REMOVE ROTTEN WOOD NAILERS AND REINSTALL NEW PRESSURE TREATED WOOD NAILER TO MATCH EXISTING.

6. SECTIONS PROVIDED TO AID WITH DEMOLITION ONLY. VERIFY EXACT CONDITIONS IN FIELD AND NOTIFY ARCHITECT OF UNFORESEEN CONDITIONS.

DEMOLITION PLAN, EXTERIOR ELEVATIONS, SECTIONS & DETAILS - BLDG H

DSK JOB NO: 16010

SHEET NUMBER
A2.00H

DRAFTER: JH PM: JC REVIEWER: AK

SHEETS PROVIDEDED "AS-IS" TO THE DISTRICT FOR PLANNING PURPOSES. SET IS PRE-50% CD, AND A WORK IN PROGRESS. NOT FOR CONSTRUCTION.

KEYNOTE LEGEND

B.01	REMOVE EXISTING FLOORING MATERIAL. PREPARE SURFACE TO RECEIVE NEW FINISH.
B.03	TILE FLOOR TO REMAIN, EXCEPT AS REQUIRED TO INSTALL NEW FIXTURES.
F.01	REMOVE EXISTING DOOR AND FRAME IN THEIR ENTIRETY.
F.02	REMOVE EXISTING DOOR AND HARDWARE, LEAVING DOOR FRAME IN PLACE.
G.02	REMOVE EXISTING WINDOW SYSTEM, LEAVING STRUCTURE. SEE REFERENCED DEMOLITION DETAILS. PREPARE FOR NEW WORK.
G.03	REMOVE EXISTING WINDOW
H.01	EXISTING CASEWORK TO REMAIN. PREPARE PREVIOUSLY PAINTED SURFACES TO RECEIVE NEW PAINT. SEE SPECS.
H.02	EXISTING CASEWORK TO REMAIN. PROTECT IN PLACE. DOES NOT REQUIRE PAINT.
P.03	EXISTING WALKWAY COVER TO REMAIN.

DEMOLITION GENERAL NOTES

1. ALL KEYNOTES ARE TYPICAL UNLESS OTHERWISE NOTED.
2. CONTRACTOR IS RESPONSIBLE TO PATCH AND REPAIR ALL WALLS, CEILINGS, AND FLOORING DAMAGED DURING DEMOLITION IN SCOPE OF WORK.
3. REMOVE WITHIN AREA OF WORK: EXISTING WINDOW FRAME, WOOD TRIM, AND GROUT. SEE DEMOLITION WINDOW DETAILS.
4. CONTRACTOR IS RESPONSIBLE TO REMOVE, REINSTALL, AND REWIRE ALL ELECTRICAL CONDUITS, OUTLETS, AND THERMOSTATS AS NEEDED TO PERFORM WINDOW DEMOLITION & NEW WINDOW INSTALLATION.
5. AT ALL EXISTING WINDOW ROUGH OPENINGS, REMOVE ROTTEN WOOD NAILERS AND REINSTALL NEW PRESSURE TREATED WOOD NAILER TO MATCH EXISTING.
6. SECTIONS PROVIDED TO AID WITH DEMOLITION ONLY. VERIFY EXACT CONDITIONS IN FIELD AND NOTIFY ARCHITECT OF UNFORESEEN CONDITIONS.
